Preface xi
Acknowledgments xiii
About the Authors xv
Notation Used xvii
List of Abbreviations xix

1 Introduction 1
1.1 First Encounter with Intra-Individual Variation 1
1.1.1 Cattell's Data Box 2
1.1.2 IAV in Psychology and Related Sciences 4
1.1.3 In What Areas Have the Studies of IAV Been Useful? 6
1.2 Statistical Analysis of IAV: An Overview of the Structure of This Book 10
1.2.1 Focus on Dynamic Factor Models 11
1.2.2 Focus on Replicated Multivariate Time Series 12
1.2.3 Focus on User-Friendly Model Selection and Estimation Approaches 13
1.2.4 Special Topic: Methods for Dealing with Heterogeneous Replications 14
1.2.5 Special Topic: Non-Stationary Dynamic Factor Models 14
1.2.6 Special Topic: Control Theory 15
1.2.7 Special Topic: Intersection of Network Science and IAV 15
1.3 Description of Exemplar Data Sets 16
1.3.1 Big Five Personality Daily Data 16
1.3.2 Fisher Data 16
1.3.3 The ADID Study 17
1.3.4 fMRI Data 17
1.4 Notation 18
1.5 Conclusion 18
References 18
Appendix: Heuristic Introduction to Time Series Analysis for Psychologists 22

2 Ergodic Theory: Mathematical Theorems about the Relation between Analysis of IAV and IEV 27
2.1 Introduction 27
2.2 Some History Regarding Generalizability of IEV and IAV Results 28

2.3 Two Conceptualizations of Time Series 31
2.4 Some Preliminaries 32
2.5 When Is a System Ergodic? 36
2.6 Birkhoff's Theorem of Ergodicity 37
2.7 Heterogeneity as Cause of Non-Ergodicity 39
2.8 Example of a Non-Ergodic Process 41
2.9 Conclusion 44
References 45

3 P-Technique 49
3.1 The P-Technique Factor Model 50
3.2 The Structural Model of the Covariance Function of $y(t)$ in P-Technique Factor Analysis 52
3.3 Conducting P-Technique Factor Analysis 54
3.3.1 Simulated Data 54
3.3.2 Constraints for Exploratory P-Technique Factor Analysis 55
3.3.3 Assessing Goodness of Fit 57
3.3.4 Alternative Indices of Model Fit 58
3.3.5 An Important Caveat 59
3.3.5.1 The Recoverability of P-Technique 60
3.3.5.2 Statistical Theory 60
3.3.5.3 Concluding Thoughts 60
3.3.6 Convention 61
3.3.7 Determining the Number of Factors in P-Technique Factor Analysis 61
3.3.8 Oblique Rotation to Simple Structure 63
3.3.9 Testing the Final Oblique P-Technique Two-Factor Model 64
3.3.10 Empirical Example 65
3.4 Conclusion 68
3.4.1 Statistical Background 68
3.4.2 Application of P-Technique to Empirical Data Sets 69
References 69

4 Vector Autoregression (VAR) 73
4.1 Brief Introduction to the Use of AR and VAR Analysis in the Study of Human Dynamics 73
4.2 Elementary Linear Models for Univariate Stationary Time 74
4.3 Stability and Stationarity 78
4.3.1 Technical Details Regarding Stability 80
4.3.2 Testing for Stability 81
4.3.3 Tests for Stationarity 81

4.4 Detrending Data ... 85
4.5 Univariate Order Selection ... 88
4.6 General VAR Model ... 90
4.7 Multivariate Order Selection ... 93
4.8 Testing of Residuals ... 95
4.9 Structural Vector Autoregression ... 96
4.10 Granger Causality ... 98
4.11 Discussion ... 99
References ... 100

5 Dynamic Factor Analysis ... 103
5.1 General Dynamic Factor Models ... 104
5.1.1 Process Factor Analysis ... 105
5.1.2 Shock Factor Analysis ... 108
5.2 Lag Order Selection ... 109
5.3 Estimation ... 109
5.3.1 SEM Estimation with Maximum Likelihood ... 110
5.3.1.1 Application 5.1: Exploratory SFA Estimated on Simulated Data with SEM ... 113
5.3.1.2 Application 5.2: PFA Estimated on Simulated Data with SEM ... 116
5.3.2 SEM with MIIV-2SLS Estimation ... 118
5.3.2.1 Application 5.3: PFA Estimated on Simulated Data with MIIV-2SLS ... 120
5.3.2.2 Application 5.4: PFA on fMRI Data ... 121
5.3.3 Raw Data Likelihood Approach ... 121
5.3.3.1 Application 5.4: PFA Estimated on Simulated Data with the Kalman Filter ... 127
5.4 Conclusions ... 128
References ... 128

6 Model Specification and Selection Procedures ... 131
6.1 Data-Driven Methods for Person-Specific Discovery of Relations among Variables ... 132
6.2 Filter Methods ... 133
6.3 Wrapper Methods ... 134
6.3.1 Wald's Test ... 135
6.3.2 Likelihood Ratio Tests ... 135
6.3.3 Score Functions ... 136
6.3.4 Example: Automated Relation Selection Using Wrapper Methods ... 137
6.3.4.1 Model Search Procedure ... 137
6.3.4.2 Simulated Data Example ... 139
6.3.4.3 Empirical Data Example ... 141
6.3.5 Conclusion on Wrapper Approaches ... 142

6.4 Embedded Methods: Regularization 142
6.4.1 Exemplar Approach: Regularization in Graphical VAR 144
6.5 Problems with Individual-Level Searches 146
6.6 Data Aggregation Approaches 147
6.6.1 Exemplar Output of Aggregated Approaches 147
6.6.2 Issues with Traditional Forms of Aggregation 148
6.7 Replication Approaches: Group Iterative Multiple Model Estimation (GIMME) 150
6.7.1 Original GIMME 151
6.7.2 Hybrid GIMME 154
6.8 Conclusions 156
References 157

7 Models of Intra-Individual Variability with Time-Varying Parameters (TVPs) 161
7.1 The DFM(*p,q,l,m,n*) across N ≥ 1 Individuals 163
7.2 The DFM(*p,q,l,m,n*) with TVPs as a State-Space Model 163
7.3 Nonlinear State-Space Model Estimation Methods 167
7.3.1 Estimation Procedures 168
7.3.1.1 The Extended Kalman Filter (EKF) and the Extended Kalman Smoother (EKS) 169
7.3.1.2 Parameter Estimation 171
7.4 Observability and Controllability Conditions in TVPs 173
7.5 Possible Functions for Representing Changes in the TVPs 174
7.6 Illustrative Examples 177
7.6.1 DFM Model with Time-Varying Set-Point 177
7.6.2 DFM(*p,q*,0,1,0) with Time-Varying Set-Point and Cross-Regression Parameters 183
7.7 Closing Remarks 188
References 188

8 Control Theory Optimization of Dynamic Processes 193
8.1 Control Theory Optimization 194
8.2 Illustrative Simulation 198
8.3 Summary 206
References 206

9 The Intersection of Network Science and Intensive Longitudinal Analysis 209
9.1 Terminology 209

9.2 Network Measures 213
9.2.1 Summarizing Edge Values: Degree, Density, Weight, and Strength 213
9.2.2 Centrality Measures 215
9.2.3 Measures of Segregation and Integration 216
9.3 Community Detection Algorithms 217
9.3.1 Walktrap 219
9.4 Using Community Detection to Subgroup Individuals with Similar Dynamic Processes 221
9.4.1 Exemplar Method: Subgrouping GIMME 222
9.4.2 Community Detection Empirical Example: Identifying Subsets of Individuals 224
9.5 Assessing Robustness of Community Detection Solutions 225
9.5.1 Obtaining Random Networks 225
9.5.2 Approach 1: Identifying When Solution Changes 226
9.5.3 Approach 2: Evaluating Modularity 230
9.6 Community Detection and P-Technique 230
9.6.1 Community Detection Example: Identifying Subsets of Variables 232
9.7 Discussion 234
References 234
Index 237
