Contents

About the Authors xiii
Preface xv

Chapter 1 Introduction 1

1.1 Porous Media 1
1.2 Reservoir System 1
1.2.1 Reservoir Rock 2
1.2.2 Cap Rock, Seal 4
1.2.3 Trap 4
1.2.4 Source Rock 5
1.2.5 Migration and Trapping 6
1.2.6 Aquifer 6
1.3 Typical Reservoir Rocks 6
1.4 Exploration and Field Development 9
1.4.1 Oil and Gas 9
1.4.2 CO_2 Sequestration and H_2 Storage 10
1.5 Core Analysis 12
1.6 Notes about the Book Content 14

Chapter 2 Working in the Laboratory 18

2.1 Introduction 18
2.2 Laboratory Health, Safety, and Environment 18
2.2.1 Risk Assessment and Procedure 19
2.2.2 Risk Mitigation 22
2.2.3 Risk Reduction 22
2.2.4 Manuals and Material Safety Data Sheets 23
2.2.5 Apparatus Card and Procedures 24
2.2.6 First Aid as Impact Reduction 25
2.2.7 Incident Reporting 25
2.3 Laboratory Organization 28
2.3.1 Chemical Storage; Labelling and Safety Symbols 28
2.3.2 Glassware Cleaning 31
2.4 Equipment Design 32
2.5 Experiment Organization 34
2.6 Data Analysis 35
2.6.1 General Units 35
2.6.2 Error and Uncertainty 36
2.6.3 Data Quality Control 39
2.7 A Typical Laboratory Planning Scheme 40

Chapter 3 Core Preparation and Fluid Saturation 43

3.1 Introduction 43
3.2 Coring 43
3.2.1 Conventional Coring 44
3.2.2 Wireline Coring 46
3.2.3 Continuous Coring 46
3.2.4 Sidewall Coring 46
3.3 Preparation and Handling at Well Site 46
3.4 Processing in the Laboratory 48
3.4.1 Scanning 48
3.4.2 Core Slabbing and Plug Drilling 49
3.4.3 Preservation of Core and Core Plugs 51
3.4.4 Core Cleaning 51
3.4.5 Solvents 52
3.4.6 Soxhlet Extraction 52
3.4.7 Direct Injection of Solvent 56
3.4.8 Centrifuge Flushing 57
3.4.9 Gas-Driven Solvent Extraction 57
3.4.10 Cleaning Considerations 57
3.4.11 Core Drying 57
3.5 Fluid Saturation Measurements 58
3.6 Some Notes on the Core Sample Use 63
3.7 Experiment 3.1: Saturation Determination, Dean-Stark Distillation Method 63

Chapter 4 Fluid Properties 66

4.1 Introduction 66
4.2 Fluids in Natural Reservoirs 66
4.2.1 Oil 66
4.2.2 Brine 68
4.2.3 Gasses 68
4.3 Liquid Density 69
4.3.1 Definitions 69
4.3.2 Oil Density 70
4.3.3 Brine Density 70
4.4 Measurement of Liquid Density 71
4.4.1 Archimedes Principle 71
4.4.2 Volume and Weight 72
4.4.3 Forced Oscillation Method 73
4.4.4 Experiment 4.1: Fluid Density 74
4.5 Liquid Viscosity 76
4.5.1 Effect of Pressure and Temperature on Viscosity 78
4.5.2 Viscosity Modification 79
4.6 Measurements of Viscosity 79
4.6.1 Capillary Type Viscometer 80
4.6.2 Falling (Rolling) Ball Viscometer 84

4.6.3 Viscosity Measurement by Capillary Tube (Coil) 86
4.6.4 Rotational Viscometer 90
4.6.5 Vibrational Viscometer 92
4.7 Gas Properties 92
4.7.1 Gas Density – the Real Gas Law 93
4.7.2 Gas Viscosity 95
4.8 Experiment 4.2: Liquid Viscosity 98

Chapter 5 Porosity 103

5.1 Introduction 103
5.2 Definition 104
5.3 Porosity Measurements on Core Plugs 106
5.3.1 Bulk Volume Measurement 106
5.3.2 Helium Porosity 107
5.3.3 Liquid Porosity; Gravimetric Method 111
5.3.4 Mercury Porosity 115
5.3.5 Porosity by Image Analysis 116
5.4 Experiment 5.1: Porosity Measurement Methods 117
5.4.1 Experiment 5.1 A: Helium Porosity 117
5.4.2 Experiment 5.1 B: Liquid Porosity 117
5.5 Compressibility 119
5.5.1 Types of Rock Compressibility 120
5.5.2 Laboratory Measurement of Compressibility 122

Chapter 6 Electrical Properties of Porous Media 127

6.1 Introduction 127
6.2 Resistivity of Porous Media 127
6.2 Effect of Conductive Solids 130
6.3 Effect of Overburden Pressure on Resistivity 133
6.4 Resistivity of Partially Water-Saturated Rocks 134
6.5 Measurements of Electrical Properties 136
6.5.1 Resistance Measurements of Rocks 136
6.5.2 Determination of Formation Factor, $\boldsymbol{F}$ and Liquid Resistivity, $\boldsymbol{R}_w$ 138
6.5.3 Determination of Cementation Factor, $\boldsymbol{m}$ and $\boldsymbol{a}$ 139
6.5.4 Determination of Saturation Exponent, n 139
6.5.5 Experimental Set-Up to Obtain $\boldsymbol{R}_t$ 139
6.5.6 Monitoring of Wettability Change Using Resistivity Measurements 140
6.6 Experiment 6.1: Resistivity Measurements of Fluid-Saturated Rocks 140
6.7 Spontaneous Potential and Electrokinetics 145

Chapter 7 Absolute Permeability 150

7.1 Darcy's Law 150
7.2 Kozeny-Carman Model 153

7.3 Laboratory Measurement of Absolute Permeability 158
7.3.1 Liquid Permeability 158
7.3.2 Liquid Permeability Procedure: Pre-Flooding Preparation 159
7.3.3 Experimental Procedure for Liquid Permeability Measurement 161
7.4 Gas Permeability 164
7.4.1 Klinkenberg Correction 166
7.4.2 Procedure for Measuring Absolute Permeability Using Air 167
7.4.3 High Velocity Flow 172
7.5 Experiment: Absolute Permeability Measurement 173
7.5.1 Experiment 7.1: Absolute Permeability with Brine 173
7.5.2 Experiment 7.2: Measurement of Permeability with Air 175
7.6 Viscosity Determination in Cores for Non-Newtonian Fluids 177
7.7 Transient State Permeability Tests for Low-Permeability Rocks 178

Chapter 8 Surface and Interfacial Tension 182

8.1 Introduction 182
8.2 Parameters Affecting the Interfacial Tension 185
8.3 Laboratory Measurement of Surface and Interfacial Tension 187
8.3.1 Du Noüy Ring Method 187
8.3.2 Wilhelmy Plate Method 189
8.3.3 Stalagmometry Method 191
8.3.4 Pendant Drop 193
8.3.5 Spinning Drop Method 196
8.3.6 Capillary Rise Method 198
8.3.7 Choice of Measurement Method 200
8.4 Experimental Procedures 201
8.4.1 General Experimental Preparation 201
8.4.2 Du Noüy Ring Method 201
8.4.3 Stalagmometry Method: Drop Weight and Drop Number Method 204
8.4.4 Capillary Rise Method 205
8.4.5 Pendant Drop Method 206
8.5 Experiment 8.1: Determination of Surface and Interfacial Tension 208

Chapter 9 Wettability 211

9.1 Introduction 211
9.2 Concept of Wettability 212

9.3 Wettability Classification 214
9.4 Laboratory Measurement of Wettability 216
9.4.1 Contact Angle Method 217
9.4.2 Experiment 9.1: Static Contact Angle Measurement 222
9.4.3 Amott Method 224
9.4.4 Experiment 9.2: Wettability Determination Using Amott Method 227
9.4.5 USBM Method 228
9.5 Wettability Restoration 234
9.6 Wettability Alteration 237

Chapter 10 Capillary Pressure 239

10.1 Introduction 239
10.2 Definition 240
10.3 Capillary Rise in a Tube 241
10.4 Concept of Capillary Forces in Porous Media 242
10.5 Capillary Pressure Curves of Drainage and Imbibition 243
10.6 Effect of Wettability on Capillary Pressure 247
10.7 Effect of Pore Size Distribution on Capillary Pressure 247
10.8 Effect of Capillary Pressure on Initial Fluid Distribution 248
10.9 Experimental Methods 256
10.9.1 Porous Plate Method 256
10.9.2 Experiment 10.1: Porous Plate 259
10.9.3 Centrifuge 262
10.9.4 Experiment 10.2: Determination of Primary Drainage Capillary Pressure Curve Using a Centrifuge 269
10.9.5 Mercury Injection Method (MICP) 271
10.10 Converting Mercury Capillary Pressure Data to Other Fluid Systems 273
10.11 Comparison of Methods 276
10.12 Converting Laboratory Data to Reservoir Condition 277
10.13 Leverett J-Function. Conversion to Field Conditions 282

Chapter 11 Relative Permeability 287

11.1 Introduction 287
11.2 Definitions 287
11.3 Flow of Immiscible Fluids in Porous Media 291
11.3.1 Buckley-Leverett Solution 293
11.3.2 Welge's Extended Solution 296
11.4 Displacement Efficiency 297
11.5 Production Profiles 299
11.6 Relative Permeability Models 301
11.7 Parameters Affecting the Relative Permeability Curves 302

11.7.1 Wettability 302
11.7.2 Interfacial Tension 306
11.7.3 Saturation History 307
11.8 Manipulation/Adaption of Relative Permeability 308
11.9 Relative Permeability Measurement Methods 313
11.9.1 Critical Experimental Considerations 313
11.9.2 Unsteady-State Method 314
11.10 Experimental Procedure 316
11.10.1 Pre-Flooding Preparation Prior to Experiment (Water-Oil Imbibition) 316
11.10.2 Main Experimental Procedure 320
11.10.3 Post Flooding Procedure At The End of The Experiment 321
11.10.4 Advantages and disadvantages 321
11.11 Data Analysis 322
11.11.1 Data Preparation 322
11.11.2 Dead Volume Determination and Correction 322
11.11.3 End-Point Determination 327
11.11.4 Multiphase Production 328
11.12 Data Quality Control 332
11.12.1 Experiment 11.1: Unsteady-State Oil-Water Relative Permeability Measurement 333
11.12.2 Steady-State Method 334
11.13 Calculation 339
11.13.1 Experiment 11.2: Steady-State Relative Permeability 340
11.13.2 Centrifuge Technique 342
11.14 Capillary End Effect 344

Chapter 12 2D and 3D Flow Visualization 348

12.1 Introduction 348
12.2 2D Flow Visualization 349
12.2.1 Flooding Cell Geometry and Pattern 351
12.2.2 Creating Flooding Cell Geometry and Pattern 353
12.2.3 2D Representation of Rock Structure 354
12.2.4 Image Processing 355
12.2.5 2D Representation of Rock Structure; Characterizing the Micromodel 359
12.3 3D Flow Visualization: Computed Tomography Scan 362
12.3.1 X-Ray Absorption 363
12.3.2 Components of the CT-Scan 366
12.3.3 Kinds of CT-Scan 370
12.3.4 Signal Processing: 2D Projections to 3D Image 372
12.3.5 Errors 374
12.3.6 Data Analysis and Errors 376
