Preface 5

Stanislav Bartoň
Visualisation of the electromagnetic vector fields 7

Michal Béreš
Reduced basis solver for stochastic Galerkin formulation of Darcy flow with uncertain material parameters 15

Simona Bérešová
Numerical realization of the Bayesian inversion accelerated using surrogate models 25

Jan Chleboun, Judita Runcziková, Pavel Krejčí
The impact of uncertain parameters on ratchetting trends in hypoplasticity 37

Dana Černá
Valuation of two-factor options under the Merton jump-diffusion model using orthogonal spline wavelets 47

Cyril Fischer, Jiří Náprstek
Identification of quasiperiodic processes in the vicinity of the resonance 57

Eva Havelková, Iveta Hnětynková
Residual norm behavior for Hybrid LSQR regularization 65

Jiří Hozman, Tomáš Tichý
DGM for real options valuation: options to change operating scale 75

Radka Keslerová, Anna Lancmanová, Tomáš Bodnár
Validation of numerical simulations of a simple immersed boundary solver for fluid flow in branching channels 85

Jan Lamač, Miloslav Vlasák
Finding vertex-disjoint cycle cover of undirected graph using the least-squares method 97

Josef Malík, Alexej Kolcun
Determination of the initial stress tensor from deformation of underground opening — theoretical background and applications 107

Josef Martínek, Václav Kučera
Numerical optimization of parameters in systems of differential equations 123

Ivan Němec, Jiří Vala, Hynek Štekbauer, Michal Jedlička, Daniel Burkart
New methods in collision of bodies analysis 133

Eda Oktay, Erin Carson
Mixed precision GMRES-based iterative refinement with recycling 149

Štěpán Papáček, Ctirad Matonoha
Testing the method of multiple scales and the averaging principle for model parameter estimation of quasiperiodic two time-scale models 163

Marek Pecha, Zachary Langford, David Horák, Richard Tran Mills
Wildfires identification: semantic segmentation using support vector machine classifier 173

Stefano Pozza, Niel Van Buggenhout
The $\star$-product approach for linear ODEs: a numerical study of the scalar case . 187

Jana Radová, Jitka Machalová
Identification problem for nonlinear beam — extension for different types of boundary conditions 199

Hynek Řezníček, Jan Geletič, Martin Bureš, Pavel Krč, Jaroslav Resler, Kateřina Vrbová, Arsenii Trush, Petr Michálek, Luděk Beneš, Matthias Sühring
Different boundary conditions for LES solver PALM 6.0 used for ABL in tunnel experiment 209

Karel Segeth
Spherical basis function approximation with particular trend functions 219

Stanislav Sysala
Estimation of EDZ zones in great depths by elastic-plastic models 229

David Šilhánek, Michal Beneš
Homogenization of the transport equation describing convection-diffusion processes in a material with fine periodic structure 239

Lukáš Vacek, Václav Kučera
Godunov-like numerical fluxes for conservation laws on networks 249

Karel Vacek, Petr Sváček
On finite element approximation of fluid structure interaction by Taylor–Hood and Scott–Vogelius elements 259

Jiří Vala, Václav Rek
On a computational approach to multiple contacts / impacts of elastic bodies .. 269

Jan Valášek, Petr Sváček
Interpolation with restrictions — role of the boundary conditions and individual restrictions 281

Miloslav Vlasák, Jan Lamač
Improved flux reconstructions in one dimension 293

List of participants 303
