

Preface 11

perforis

List of Symbols 12

1. Introduction 15

References to Chapter 1 21

2. Radiation Damage 22

2.1 Primary Damage Processes 22

2.1.1 The Basic Characteristics of Radiation Damage 22

2.1.2 Characteristic Parameters 25

2.1.2.1 Flux, Fluence 25

2.1.2.2 Interaction Cross-sections 27

2.1.3 Primary Events 28

2.1.3.1 Neutrons 28

2.1.3.2 Electrons 30

2.1.3.3 Positive Ions 31

2.2 Collision Cascades 33

2.2.1 The Phenomenology of the Collision Cascade 33

2.2.2 The Number of Atomic Displacements 38

2.2.2.1 Multiple Displacements 38

2.2.2.2 Parameter *dpa* 39

2.2.3 Experimental Verification 42

2.3 Radiation Damage Structure 45

2.3.1 The Microstructure 45

2.3.1.1 Lattice Defects 46

2.3.1.2 The Pre-irradiation Microstructure 47

2.3.2 The Formation of Damage Structure 48

2.3.2.1 The Formation of Dislocation Loops 51

2.3.2.2 Loop Growth 55

2.3.2.3 The Formation and Growth of Voids 56

2.3.3 Development of the Microstructure during Irradiation 56

2.3.3.1 Radiation Damage Structure 57

2.3.3.2 Microchemical Changes 61

2.3.3.3 Mathematical Models 63

References to Chapter 2 63

3. Factors Affecting Radiation Damage of Steels	66
3.1 Types of Steels, their Chemical Compositions and Microstructures	66
3.2 The Nature of Radiation Damage	79
3.2.1 Pure Iron	80
3.2.1.1 Irradiation by Neutrons	80
3.2.1.2 Irradiation by Ions	84
3.2.1.3 Irradiation by Electrons	86
3.2.2 RPV Steel	87
3.2.2.1 Direct Observation	87
3.2.2.2 Indirect Methods	93
3.2.3 Recovery from Radiation Damage to RPV Steel	94
3.3 The Irradiation Temperature	97
3.4 Neutron Environment	97
3.5 Stress Conditions	100
3.6 Environmental Effects	100
References to Chapter 3	115
4. Recovery from Radiation Damage	121
4.1 Kinetics of Annealing Recovery of Radiation Defects	121
4.2 Changes in Mechanical Properties after Annealing of Radiation Damaged Material	123
4.3 Theoretical Model for Regeneration Annealing	126
4.4 Evaluation of the Effect of Regeneration Annealing	129
4.5 Regeneration Annealing of Reactor Pressure Vessels	131
References to Chapter 4	133
5. Radiation Embrittlement of Low-Alloy Steels for Reactors	135
5.1 Characteristics of Steels for Reactor Pressure Vessels	135
5.1.1 Requirements on Steels and Alloys for RPV	135
5.1.2 Survey of Steels and Alloys Used for RPV	136
5.1.3 Survey of Promising Third-Generation Steels	140
5.2 Methods of Evaluating the Radiation Embrittlement of Steel	141
5.3 The Results of Research on Radiation Damage of Steel in Reactor Pressure Vessels in former Czechoslovakia	151
5.3.1 Study of the Radiation Stability of Steel on the Reactor Pressure Vessel at the A-1 Heavy-Water Nuclear Reactor	151
5.3.1.1 Experimental Methods	156
5.3.1.2 Effect of Objective Working Factors on Level of Radiation Damage	156
5.3.1.3 Effect of Initial Steel Properties on Degree of Radiation Damage	160
5.3.2 Study of Radiation Stability of Steel for Reactor Pressure Vessels of Light-Water Nuclear Power Plants of the VVER Type	166
5.3.2.1 Experimental Material	167
5.3.2.2 Sampling	173
5.3.2.3 Irradiation Parameters and Apparatus	173
5.3.2.4 Test Apparatus and Methods	174
5.3.2.4.1 Static Tension Tests	174
5.3.2.4.2 Notch Toughness Tests	174
5.3.2.5 Experimental Results	176
5.3.2.5.1 Radiation Strengthening	176

5.3.2.5.2 Radiation Embrittlement	184
5.4 Microstructure of VVER Type RPV Steels	198
5.4.1 Base Metal	199
5.4.2 Weld Joint	201
5.4.3 Effect of the Neutron Irradiation	210
5.5 Martensitic Ageing Steels	212
References to Chapter 5	216
6. Experimental Determination of the Mechanism of the Recovery of 15Kh2NMFA Steel after Radiation Strengthening	220
6.1 Material, Treatment and Test Samples	220
6.2 Irradiation Conditions and Experimental Apparatus	222
6.3 Experimental Results and their Statistical Treatment	222
6.4 Discussion of the Results of the Recovery Tests	225
6.5 Comparison of the Recovery of 15Kh2NMFA Steel from Radiation Strengthening with other Types of Steel	227
6.6 Contemporary View of the Importance of Radiation Damage for the RPV Lifetime and Expected Further Research	229
References to Chapter 6	234
7. Radiation Damage to Zirconium and its Alloys	236
7.1 Zirconium and its Alloys	236
7.1.1 Pure Zirconium	236
7.1.2 Zirconium Alloys	240
7.1.3 Microstructure	241
7.2 Radiation Damage Structure	246
7.2.1 Dislocation Loops	246
7.2.1.1 Type $\langle a \rangle$ Dislocation Loops	246
7.2.1.2 Loops with a c component	250
7.2.2 Dislocation Network	252
7.2.3 Cavities	255
7.2.4 The Stability of Intermetallic Phases	256
7.2.4.1 Zircalloys	256
7.2.4.2 Other Alloys	259
References to Chapter 7	261
8. Changes in the Properties of Zr Alloys as a Result of Irradiation	264
8.1 Radiation Hardening	264
8.1.1 Radiation Hardening at Low Temperatures	264
8.1.2 Radiation Hardening of Zirconium Alloys	266
8.2 Irradiation Growth	272
8.2.1 Basic Characteristics	272
8.2.2 Dependence of Irradiation Growth on Fluence	273
8.2.3 The Dependence of Irradiation Growth on Temperature	278
8.2.4 The Effect of Alloying	278
8.3 Radiation Creep	278
8.3.1 Models of Radiation Creep	278
8.3.2 Radiation Creep in Zr Alloys	282
References to Chapter 8	285

9. Corrosion of Zr Alloys in Water and Steam	289
9.1 Kinetics of Oxidation	289
9.1.1 The Effect of Impurities (Additives) on Corrosion Resistance	291
9.1.2 The Effect of Alloying Elements	292
9.1.3 The Effect of Thermal Treatment	292
9.1.4 The Effect of Surface Preparation	295
9.1.5 The Effect of Impurities in the Corrosion Medium	295
9.1.6 The Effect of the Steam Pressure	299
9.2 The Kinetics of Hydrogen Absorption	299
9.3 The Corrosion Properties of Zr Alloys	300
9.3.1 Zircaloy-type Alloys	300
9.3.2 Zr-Nb Alloy	308
9.3.2.1 Zr-1Nb Alloy	308
9.3.2.2 Zr-2.5Nb Alloy	311
9.3.3 Zirloy Alloy	315
9.3.4 Alloys for Applications in Steam at 500 °C	317
9.4 The Effect of Radiation on the Corrosion of Zr Alloys	317
9.4.1 Homogeneous Corrosion	320
9.4.2 Nodular Corrosion	323
9.5 Oxide Properties	327
9.5.1 Diffusion of Oxygen in the Oxide	327
9.5.2 Crystallographic Phase Structure in the Zr-O System	327
9.5.2.1 The Structure of the Zr-O Solid Solution	328
9.5.2.2 The Structure of the ZrO ₂ Oxide	329
9.5.2.3 Structure of the Oxide Layer	330
9.5.3 Stress at the Oxide-Metal Interface	331
9.5.4 Morphology and Porosity of the Oxide Layers	332
9.6 The Corrosion Mechanism	334
9.6.1 Uniform Corrosion	335
9.6.2 Nodular Corrosion	340
9.7 Damage to Fuel Elements as a Result of Stress Corrosion Cracking by Fission Products (SCC)	344
9.7.1 The SCC Mechanism	345
9.7.2 SCC Threshold Criteria	347
9.7.3 Damage Cumulation	352
9.7.4 Effect of Some Factors on SCC	352
References to Chapter 9	354
Subject Index	359
