

Table of contents

- 1 Possibilities of electrical energy acumulation7
 - 1.1 Introduction 7
 - 1.2 possibility of electricity Storage 8
 - 1.2.1 Electrochemical Accumulators..... 8
 - 1.2.2 Mechanical Accumulators 8
 - 1.2.3 Supercapacitors 9
 - 1.2.4 Pump Storage Power Stations 10
 - 1.2.5 Adiabatic Compressed Air Power Plants..... 11
 - 1.3 Conclusion..... 12
- 2 Determination of the value of the capacitive earth-fault current in distribution networks operated with the isolated neutral point.....13
 - 2.1 Introduction 13
 - 2.2 Calculation based on the node-voltage analysis 14
- 3 Application of Approximation Function Method for Modeling of Double-Circuit Power Lines in Unconventional Simulation Tools.....21
 - 3.1 Introduction 21
 - 3.2 Simulation software Dynast 22
 - 3.3 Analytical models of power line..... 22
 - 3.4 Calculation of capacitances using the traditional method 23
 - 3.5 Calculation of capacitances using the approximation function method
24
 - 3.6 Conclusions 31
- 4 Prediction of electric power generation from photovoltaic power plants based on available cloud forecast32
 - 4.1 Introduction 32
 - 4.2 Problem definition 33
 - 4.3 Pv predictor 34

4.3.1	Cloud data.....	35
4.3.2	Daily chart of electricity production.....	35
4.3.3	Calculation of daily diagram for sunny days.....	36
4.3.4	Curves of clear sky days.....	37
4.3.5	Adjusting of daily chart of reference PVPP to the daily chart of EON – East region.....	37
4.3.6	Daily charts of generated power for certain region	40
4.3.7	Determining of correction coefficient for separate cloud class ..	40
4.3.8	Daily charts correction for certain cloud classes	42
4.3.9	Predictor testing.....	42
4.4	Conclusion.....	43
5	Transformer insulation system, its properties and methods of diagnosis.....	44
5.1	Introduction	44
5.2	Insulating oil-paper systEm.....	45
5.3	Conclusions	53
6	Different type of the segments in the cold crucible.....	54
6.1	Introduction	54
6.2	Construction solution of the cold crucibles	54
6.3	Description of the problem.....	55
6.4	Theory reference.....	58
6.5	Results	59
6.6	Conclusion.....	65
7	Comparison of Methods for Contingency Analysis	66
7.1	Introduction	66
7.2	Fast-decoupled method.....	66
7.2.1	Derivation from Newton-Raphson method	66
7.2.2	Simplifications.....	67
7.2.3	Numerical procedure of Fast-Decoupled method.....	68

7.2.4	Power flow computing time	69
7.2.5	Computation time per one iteration	70
7.3	Contingency analysis.....	71
7.3.1	Branch outage.....	71
7.3.2	Steps of contingency analysis.....	72
7.4	Fast-Decoupled method used for accelerating of computation	72
7.5	Comparison of NR and FD methods	74
7.6	Conclusion.....	75
8	Photovoltaic generators as power regulate sources in electrical networks.....	76
8.1	Introduction	77
8.2	Primary and secondary control	78
8.3	Virtual methods	80
8.4	Simulation model	82
8.5	Simulation results	84
8.6	Conclusion.....	86
9	LIST OF LITERATURE.....	88
10	LIST OF AUTHORS.....	93
11	REGISTER.....	95
