In writing the Foreword, Danny Joel built a welcome bridge from Juniper et al. to this volume. The editors at Oxford University Press—Jair Sherman and Bethany Kershaw—kept the editors and contributors on track and, with their production team, seen this book through to publication. To all, the editors are most grateful.

Finally, like carnivorous plants, doing good science has both benefits and costs. The efforts of the editors on this book were supported in part by grants from the US National Science Foundation awards DEB-11-44056, DEB-12-57491, and DEB-14-50519 to AME, by the Harvard Forest, and by Long Term Research Development Project No. 6298593 from the Czech Academy of Sciences to LA.
