

Table of Contents

PART I: MECHANICS OF RIGID BODIES

Chapter 1: Fundamentals of the Mechanics of Particles and Rigid Bodies

<i>Section</i>		<i>Section</i>	
1.1. Length, mass, and time	3	1.10. Collision of two bodies	16
1.2. Force	7	1.11. Velocity, position, and inertial forces	18
1.3. Gravitation	8	1.12. Position-velocity forces on rigid bodies	23
1.4. Superposition of forces	10	1.13. Dry friction	24
1.5. Dimensions	10	1.14. Forces on rigid bodies	25
1.6. Center of gravity	11	1.15. Units	26
1.7. Internal forces	14	1.16. Dashpots	27
1.8. Momentum	15		
1.9. Energy	15		

Chapter 2: Applications and Further Development of the Theory of the Mechanics of Rigid Bodies

2.1. Example of a spring-mass system	29	diesel engine	48
2.2. Force deviations from equilibrium	31	2.13. Diesel engine driving a ship propeller	52
2.3. Clocks	33	2.14. Gas turbine driving a generator	53
2.4. Automobile without shock absorbers	35	2.15. Shaft connected to a rotating body	53
2.5. Spring-dashpot-mass system	36	2.16. Diesel engine driving a marine propeller through a long shaft	54
2.6. Instrument on a rubber foundation	37	2.17. Airplane	55
2.7. Automobile with shock absorbers and elastic tires (motion with two degrees of freedom)	39	2.18. Conservative forces and potential energy	56
2.8. Sliding weight subject to dry friction	40	2.19. Forces that can be neglected	58
2.9. Body attached to a spring hinged at one end (two-dimensional motion)	43	2.20. Primary and secondary quantities	59
2.10. Rocket moving in two-dimensional space	44	2.21. The Buckingham Pi Theorem	60
2.11. Rotation	45	2.22. Dimensional analysis applied to a falling body	63
2.12. Throttle movement and speed of a		2.23. Dimensional analysis applied to a vibration problem	64
		Problems for Part I	66

PART II: ELECTRICITY AND MAGNETISM

Chapter 3: Fundamentals of Electricity and Magnetism

3.1. Inverse square law	71	3.7. Force on a conductor in a magnetic field	91
3.2. Potential	74	3.8. Faraday's law of induction	93
3.3. A connection between electricity and magnetism	76	3.9. Dipoles	96
3.4. Flux and lines of force	80	3.10. Magnetic field produced by a single charge and a current in a circuit	99
3.5. Electromotive and magnetomotive forces	87		
3.6. Heat loss in a conductor	90		

Section

3.11. Work done on a conductor moved in a magnetic field	100
3.12. Ampere turns	101
3.13. Capacitors	104
3.14. An induction law	108

Chapter 4: Electric Systems

4.1. Example of a resistance network	121
4.2. Elements in series	122
4.3. Capacitors in parallel	123
4.4. Capacitor discharging through a resistor	124
4.5. Coil in a circuit with a switch	125
4.6. Circuit with switch opened	126
4.7. Alternating current generator in a circuit	127
4.8. Impedance	128
4.9. Impedance method of treating a network	130
4.10. Impedance in a mechanical sys- tem	131
4.11. Mathematical formulation of a linear network	131
4.12. Electronic amplification stage	133
4.13. Electric motor raising an elevator car	136

Chapter 5: Electromagnetic Fields

5.1. Maxwell's equations for electro- magnetic fields	153
5.2. Light	159

Section

3.15. Self-inductance	114
3.16. Mutual inductance	116
3.17. Networks	118
3.18. Kirchhoff's laws	119

4.14. Transmission line	138
4.15. Ideal transformers	141
4.16. Permanent magnet direct current motor	143
4.17. Direct current series motor	143
4.18. Induction motor	144
4.19. Direct current generator	144
4.20. Voice coil	145
4.21. Microphone	146
4.22. Low pass filter	146
4.23. Neon tube	148
4.24. Rectifier stage	148
4.25. Transistor	149
4.26. Transducer	149
4.27. Procedure for setting up elec- trical problems	150
4.28. Dimensional analysis applied to a transmission line problem	151

5.3. Energy density	163
5.4. Radiation pressure	165
Problems for Part II	175

PART III: HEAT**Chapter 6: First Law of Thermodynamics**

6.1. Temperature	183	baric processes	202
6.2. Equation of state	185	6.10. Enthalpy of gases	205
6.3. Pressure-volume diagram of water	187	6.11. Flow of gas through a nozzle	205
6.4. Heat	188	6.12. Flow of gas into a vessel	207
6.5. Internal energy	190	6.13. Gas turbines	210
6.6. Work	192	6.14. Rocket	213
6.7. Enthalpy	193	6.15. Gasoline and diesel engines	217
6.8. Enthalpy in applications	193	6.16. One cylinder gasoline engine dur- ing intake	219
6.9. Adiabatic, isothermal, and iso-		6.17. Steam	222

Chapter 7: Second Law of Thermodynamics

7.1. The Kelvin-Planck and Clausius formulations of the second law of thermodynamics	223	7.5. Kelvin temperature	227
7.2. Carnot cycle	225	7.6. Entropy	232
7.3. Engine operating between two reservoirs	226	7.7. Phase transitions	241
7.4. Carnot cycle as a most efficient cycle	226	7.8. Entropy of a mixture of perfect gases	243
		7.9. Adiabatic equation of state	244
		7.10. Refrigeration cycle	245
		7.11. Steam flow through a nozzle	246

Chapter: 8 Heat Transfer

8.1. Conduction	248	8.5. Heat transfer to a wall by convec- tion	252
8.2. Heat stored	249	8.6. Radiation	252
8.3. Heat transfer through a wall	249	8.7. Kirchhoff's law	253
8.4. Convection	251		

<i>Section</i>		<i>Section</i>	
8.8. Stefan-Boltzmann law	255	shape of cross sections of the blade	262
8.9. Molten iron in an insulating container exposed to the air	257	8.13. Heat transfer in a stirring rod	264
8.10. Molten iron in a noninsulating container exposed to the air	257	8.14. Heat conduction due to steam flow through a pipe	266
8.11. Heat transfer to gas turbine blades by radiation, convection, and conduction	259	8.15. Principles in the analysis of heat	268
8.12. Heat transfer to gas turbine blades taking into account the		8.16. Dimensional analysis applied to a free convection problem	268
		Problems for Part III	271

PART IV: ELASTICITY

Chapter 9: Fundamental Theory of Elasticity

9.1. Internal forces	275	9.5. Relations between stresses	285
9.2. Elastic bodies	277	9.6. Stress on arbitrary plane	287
9.3. Strains	278	9.7. Stress-strain relations	289
9.4. Geometric interpretation of strains	283	9.8. Plastic flow and creep	296

Chapter 10: Elasticity for One and Two Dimensions

10.1. Stretched wire	297	any conditions for two-dimensional problems	312
10.2. Flexible cable	300	10.8. Beam bent by couples	314
10.3. Thin beams	305	10.9. The principle of Saint-Venant	317
10.4. Buckling of a beam	308	10.10. Rectangular plate under compression	318
10.5. A uniformly loaded continuous beam	309	10.11. Dimensional analysis applied to a stretched string	319
10.6. Two-beam hoist	310		
10.7. Differential equations and bound-			

Chapter 11: Elasticity in Three Dimensions

11.1. Equilibrium equations and boundary conditions for three dimensions	321	11.6. Bottom of a barrel in the form of a membrane	326
11.2. Rod stressed at the ends	321	11.7. Energy method applied to a helical spring	328
11.3. Three-dimensional treatment of a beam bent by couples	322	11.8. Pure bending of plates	330
11.4. Torsion of a circular cylindrical shaft	323	11.9. Thermal stresses	333
11.5. Balloon under pressure	325	11.10. Principles of the analysis of elastic bodies	334
		Problems for Part IV	335

PART V: FLUID MECHANICS

Chapter 12: Fundamental Fluid Theory

12.1. Fluids	339	12.14. Checking a solution by weakening assumptions	359
12.2. Pressure	341	12.15. Example of weakening assumptions in an oscillatory case	359
12.3. Liquids and gases	342	12.16. Weakening assumptions in a transient case	360
12.4. Ideal fluids	342	12.17. Impulse wheel	360
12.5. Continuity equation for incompressible fluids	345	12.18. Viscosity	361
12.6. Flow of water through a wide pipe	346	12.19. Flow of water through a circular pipe	363
12.7. Transient flow through a vertical pipe	348	12.20. Energy in the case of pipe flow	364
12.8. Pressure energy	349	12.21. Flow in a trough with an open surface	364
12.9. Velocity and potential heads	350	12.22. The solution of flow problems	365
12.10. Flow through an orifice	353	12.23. Dimensional analysis applied to fluid problems	366
12.11. Emptying a reservoir	354		
12.12. Solenoid valve problem	355		
12.13. Jet of water striking a spring-loaded plate	357		

Chapter 13: Compressible Fluids**Section**

13.1. Water hammer in a circular pipe	367
13.2. Change in volume due to compression of a liquid element	370
13.3. Continuity equation for water hammer	371
13.4. Relation between changes in density and pressure	372
13.5. Force equation for water hammer	373
13.6. Equations for a slanted pipe	374

Section

13.7. Allievi's equations	375
13.8. Friction in pipe flow	375
13.9. Sudden closing of a pipe	376
13.10. Sudden opening of a pipe	377
13.11. Pipe with different sections	377
13.12. Gases	377
13.13. Piston in a cylinder	378
13.14. Sound	378

Chapter 14: Aerodynamics

14.1. Flow past an airplane wing	381
14.2. Velocity potential and circulation	381
14.3. Lift and drag	385
Problems for Part V	391

Appendix	393
Answers and hints	395
Index	415
