

CONTENTS

INTRODUCTION	xix
CHAPTER I. THE SOLID SURFACE	1
Reflection electron microscopy	1
The scanning electron microscope	3
The X-ray scanning microanalyser	3
Electron diffraction	5
Field emission microscopy	7
High resolution electron microscopy	8
(a) Resolution of the crystal lattice	8
(b) Observation of polymer molecules	9
(c) Tracks formed by fission fragments	10
Moiré fringe technique	11
Decoration of surface features	12
The appearance of the solid surface	13
Metal surfaces in air	14
Mechanically prepared surfaces	14
REFERENCES	15
CHAPTER II. THE INFLUENCE OF SIZE AND SURFACE STRUCTURE ON THE STRENGTH OF SOLIDS	17
The strength of glass and other non-metallic fibres	18
Growth features and strength properties of some non-metallic whiskers	20
Growth steps as a source of stress concentration	21
The strength of metal whiskers	24
The effect of surface-active materials on the strength of metals	26
Implications in the friction and wear of solids	27
REFERENCES	28
CHAPTER III. CONTACT OF METALS	29
INFLUENCE OF DUST ON THE CONTACT OF SOLIDS	29
Effect of surface finish and particle size	31
Effect of load	32
Effect of relative hardness of particles	33
Effect of particulate contamination	34
EFFECT OF CURRENT ON THE CONTACT OF METALS	34
FRICTION AND CONDUCTION OF NOBLE METALS. EFFECT OF WORK-HARDENED SURFACE LAYERS	38
Gold surfaces	38
Platinum	40
Silver and palladium	41

FRICITION AND CONDUCTION OF BASE METALS	41
Effect of oxide layers	41
Indium and tin	42
Lead	43
Aluminium	43
Copper	44
Steel	44
Chromium	47
Dissimilar metals	48
Effect of oxide films on metallic friction	49
Conclusion	50
REFERENCES	51
CHAPTER IV. MECHANISM OF METALLIC FRICTION: ROLE OF COMBINED STRESSES AND SURFACE CONTAMINATION	52
Effect of tangential forces on the contact of metallic bodies	56
Method	57
The displacements	57
Contact conductance	59
Reversibility of displacements	62
Effect of lubricant films	66
Effect of tangential forces on elastically loaded bodies	66
Macroscopic sliding	71
The basic equation of junction growth	72
The condition for macroscopic sliding	74
Stick-slip motion	78
The friction coefficient for elastically loaded surfaces	79
The friction of extended surfaces	82
Work-hardening and ductility	83
Conclusion	84
REFERENCES	86
CHAPTER V. THE ADHESION OF CLEAN METALS	87
Apparatus	88
The effect of thorough cleaning on friction and adhesion	90
The relation of adhesion to tangential force	91
Adhesion at elevated temperatures: the effect of ductility	96
The temperature at which strong adhesion commences	99
The behaviour of large-scale model junctions	100
The adhesion of metals in air	101
The general mechanism of metallic adhesion	103
Conclusion	106
REFERENCES	107

CHAPTER VI. METALLIC TRANSFER IN MACHINING OPERATIONS	108
Transfer from hammers	108
Transfer from clamps and vices	109
Transfer from screwdrivers and spanners	110
Transfer from tool-bits	111
Transfer from twist-drills	112
Transfer from riveters	113
Transfer to non-metals	113
The significance of metallic transfer	114
Conclusion	115
REFERENCES	115
CHAPTER VII. FRICTION AND ADHESION OF BRITTLE SOLIDS	117
Friction of rock-salt	117
Deformation properties of rock-salt	118
The stress-strain curve in compression	119
Indentation hardness of rock-salt	121
Plastic deformation of friction track	122
Adhesion of rock-salt	123
Friction, deformation, and adhesion	124
The friction of other brittle materials	126
REFERENCES	127
CHAPTER VIII. FRICTION, ADHESION, AND DEFORMATION PROPERTIES OF ICE AND SOLID KRYPTON	128
THE ADHESION AND STRENGTH PROPERTIES OF ICE	128
Measurement of adhesion	129
Preliminary experiments: residual stresses and rate of shear	129
Adhesion of ice to clean metal surfaces	130
Creep in ice	132
Effect of surface contamination on stainless steel	133
Adhesion to polymers	135
Effect of dissolved salts on the adhesion of ice	136
Adhesion of ice to metals and plastics	139
THE FRICTION OF ICE	140
Friction and adhesion of ice	143
THE FRICTION AND DEFORMATION OF SOLID KRYPTON	144
Friction results	145
Hardness	146
Friction and shear strength	147
Frictional behaviour of solid krypton	148
REFERENCES	148

CHAPTER IX. FRICTION OF SKI ON SNOW AND ICE	149
The static friction of ski on snow and ice	149
Kinetic friction on snow and ice	151
Running experiments with ski	153
Variation of hardness with temperature and speed	154
Influence of contact angle and wetting	156
Conclusion	158
REFERENCES	158
CHAPTER X. DEFORMATION AND FRICTION OF DIAMOND	159
The surface energy of diamond	160
The deformation of diamond by spherical indenters	161
Crack formation under impact: effect of temperature and repeated impacts	163
Critical load for crack formation during sliding	164
Plastic flow in diamond	166
The friction and surface damage of diamond in air	169
Effect of orientation	170
The friction of diamond at low loads <i>in vacuo</i>	173
The friction and surface damage of diamond in air at heavier loads	175
The wear and abrasion of diamond	177
The sliding of diamond on glass	178
Sliding of metals on diamond at very high speeds	182
The friction and wear of diamond	184
REFERENCES	185
CHAPTER XI. THE FRICTION OF LAMELLAR SOLIDS	186
GRAPHITE	186
Structure and deformation properties	186
The friction and deformation of graphite in air	187
Friction of clean graphite at room temperature and at elevated temperatures	188
The effect of surface films on the friction of graphite	189
The mechanism of the friction of graphite	191
BORON NITRIDE	193
Friction of boron nitride in air	194
Friction of outgassed boron nitride	194
MOLYBDENUM DISULPHIDE	196
Friction of MoS ₂ in air	196
Effect of vapours on the friction of MoS ₂	197
Friction of MoS ₂ <i>in vacuo</i>	197
The mechanism of friction of MoS ₂	198
MICA	199
Friction of mica in air	199
Mica and talc	202
The frictional properties of lamellar solids	203
REFERENCES	203

CHAPTER XII. LUBRICATING FILMS OF LAMELLAR SOLIDS	205
THE BEHAVIOUR OF LAMELLAR SOLIDS DEPOSITED AS THIN FILMS	205
Electron diffraction and microscopic studies of the surface	205
Friction results	206
Graphite	206
Molybdenum disulphide	207
Boron nitride	207
Boron nitride and graphite films	209
Talc	209
The friction tracks	209
The action of rubbed layers	210
CHEMICALLY FORMED FILMS	210
Molybdenum and uranium	211
Boron	211
Titanium	211
Chromium and tungsten carbide	212
The action of lamellar films formed from the vapour phase	212
REFERENCES	213
CHAPTER XIII. THE FRICTION AND DEFORMATION OF POLY- MERIC MATERIALS	214
The interfacial shear strength	214
Effect of temperature	215
The friction of P.T.F.E.	216
P.T.F.E. bearings	219
Effect of load on the friction of polymers	219
Experimental study of variation of A with W	220
Theoretical models showing variation of area of contact with load	223
Deformation properties and friction of polymers	226
Deformation of polymers	228
Effect of curvature	229
Correlation of areal measurements and friction results	230
Effect of time of loading	233
Effect of orientation	234
Electrostatic effects	235
Friction at high speeds	236
The surface damage of polymers during sliding	237
The mechanism of polymer friction	240
REFERENCES	241
CHAPTER XIV. THE FRICTION OF ELASTIC SOLIDS	242
THE FRICTION OF WOOD	243
The absorption of water	245
The friction of steel and P.T.F.E. on wet balsam wood	245
Deformation of wood	248
Rolling of hard spheres on wet balsam wood	249

Hysteretic losses in wet wood	250
Quantitative correlation of observed and calculated rolling friction	252
Interfacial adhesion during sliding	252
Sliding and rolling on 'dry' wood (containing less than 30 per cent. moisture)	254
Rolling friction	254
Sliding friction: steel surfaces	255
Sliding friction: P.T.F.E. surfaces	256
Lubricated sliding on dry wood	257
The friction of lignum vitae	257
Deformation and disintegration of wood in pulping	259
The mechanism of the friction of wood	260
THE FRICTION OF LUBRICATED RUBBER	261
Friction of conical sliders	263
The shearing term in lubricated sliding	265
Lubricant efficacy and hysteresis losses	265
Sliding on wet rubber at higher speeds	267
The skidding of tyres on wet roadways	269
The nature of the protuberances	270
Overheating and free-rolling friction	271
Some practical tyre tests	274
Hysteresis and wear of tyres	275
The adhesion component of rubber friction	275
The friction of elastic solids	276
REFERENCES	276
CHAPTER XV. THE MECHANISM OF ROLLING FRICTION	277
ROLLING ON METALS IN THE PLASTIC RANGE	278
Apparatus	278
The first traversal	281
Deformation of track	282
Repeated traversals of the track	284
The equilibrium state	285
ROLLING ON METALS IN THE ELASTIC RANGE	288
Rolling without interfacial slip	291
Rolling of metal spheres on metal spheres	291
Equilibrium rolling for a very large number of traversals	293
ROLLING ON ELASTIC AND VISCO-ELASTIC MATERIALS	295
Elastic input energy per unit distance of rolling	295
Reynolds slip	299
Rolling of a sphere on flat rubber	302
Heathcote slip	303
Hysteretic losses in rolling	306
The analysis of Bueche and Flom; and Atack <i>et al.</i>	311
HYSTERESIS LOSSES IN THE ROLLING OF METALS	313
Variation of hysteresis losses with strain	316

CONTENTS

xiii

Surface interaction between rolling metals	317
Friction of ball- and roller-bearings	318
REFERENCES	319
CHAPTER XVI. THE HARDNESS OF SOLIDS	320
Introduction	320
INDENTATION HARDNESS OF METALS	320
The deformation properties of metals under uniaxial tension or compression	321
Indentation of materials of constant yield stress	322
Vickers hardness of materials of constant yield stress	323
Principle of geometric similarity	325
Microhardness measurements	325
Vickers hardness of materials which work-harden	328
Conical indenters in the Rockwell test	329
Brinell hardness measurements	330
Deformation around the indentation	332
Elastic recovery of hardness indentations	338
INDENTATION HARDNESS AND CREEP OF METALS	338
Effect of temperature	340
Effect of short loading times	340
SCRATCH HARDNESS OF SOLIDS	342
Indentation, friction, and scratching of non-metals	343
The scratch hardness of metals	346
Relation between Mohs hardness and indentation hardness of solids	347
The hardness of metals and non-metals	348
REFERENCES	349
CHAPTER XVII. WEAR OF SOLIDS	350
Laws of wear	350
Effect of load: mild and severe wear	350
Junction shearing in severe wear	352
The nature of the initial wear fragment	353
Wear and transfer in severe wear	354
Wear and transfer in mild wear	355
Effect of environment	355
Effect of speed	358
Wear by abrasives	359
The nature of mechanically abraded and polished surfaces	362
Wear and abrasion	363
REFERENCES	364
CHAPTER XVIII. BOUNDARY LUBRICATION	365
Boundary lubrication of metals	365
The effect of temperature	367

Friction, durability, and wetting of monomolecular lubricant films	370
Wear of monolayers	372
Boundary lubrication of polymers	372
Hydrodynamic factors in the lubrication of yarns	374
Dimensional analysis	376
Effect of speed, viscosity, and initial tension	377
Lubrication of bone joints	379
Mixed lubrication	381
REFERENCES	383
CHAPTER XIX. STRUCTURE AND PROPERTIES OF LUBRICANT MONOLAYERS	384
THE STRUCTURE AND ORIENTATION OF ADSORBED MONOLAYERS	384
Long-chain fatty acids on silver and platinum	384
Effect of heating	387
Long-chain amines and alcohols	388
Fully fluorinated long-chain compounds	388
Long-chain fatty acids on reactive metals	389
Long-chain fatty acids on silver single-crystals	389
Structure and orientation	391
THE MORPHOLOGY OF ADSORBED MONOLAYERS	391
WETTING AND CONTACT ANGLES	394
THE SHEAR STRENGTH OF CALCIUM STEARATE MONOLAYERS	396
FRICITION AND ELECTRICAL RESISTANCE OF MONOLAYERS	398
REFERENCES	402
CHAPTER XX. ADHESION AND SURFACE ENERGY OF SMOOTH SURFACES	403
THERMODYNAMICS OF ADHESION: ACTION OF ADHESIVES	403
ADHESION OF MOLECULAR SMOOTH SURFACES	408
THE SURFACE ENERGY OF MICA	409
CALCULATIONS OF SURFACE ENERGY	415
THE RANGE OF ACTION OF SURFACE FORCES	416
REFERENCES	426
CHAPTER XXI. MECHANICAL PROPERTIES AND FRICTIONAL PROPERTIES OF SOLIDS AT HIGH TEMPERATURES	428
The high-temperature furnace	428
TENSILE PROPERTIES OF REFRACTORY METALS	429
(a) Polycrystalline specimens	429
Tensile apparatus and specimens	430
Effect of temperature on ultimate tensile strength (U.T.S.)	430
Effect of temperature on yield stress	431
Effect of temperature on percentage elongation to fracture	432

CONTENTS

xv

Mode of deformation and fracture	434
(<i>b</i>) Single crystals	435
HARDNESS OF REFRACTORY MATERIALS	437
Apparatus for hardness measurements	438
Variations of hardness with temperature	441
Mode of deformation	442
FRICITIONAL PROPERTIES OF SOLIDS AT HIGH TEMPERATURES	444
The friction of polycrystalline refractory solids	445
The friction of single crystals of refractory solids	447
Mechanism of friction of refractory solids	449
REFERENCES	450
CHAPTER XXII. FRICTION AT VERY HIGH SPEEDS	451
EXPERIMENTAL TECHNIQUES	452
The deceleration technique	452
The impact technique	454
THE FRICTION AND WEAR OF METALS AT HIGH SPEEDS	457
Copper	457
Bismuth	459
Tungsten	463
Other metals	464
THE SLIDING MECHANISM FOR METALS	464
Surface heating and melting	465
Friction and wear	469
THE SLIDING OF NON-METALS	472
Glass	473
Polymers (rubber, P.T.F.E., nylon)	474
Conclusion	477
REFERENCES	478
CHAPTER XXIII. THE DEFORMATION OF SOLIDS BY LIQUID IMPACT AT SUPERSONIC SPEEDS	479
The production of high-velocity liquid jets	480
The deformation of hard polymers	482
The ring crack	483
The area outside the ring crack	484
The deformation mechanism	485
The effect of several impacts on the deformation of polymers	486
Impact at an angle	487
The deformation of soft polymers and elastomers	488
The deformation of metals	489
The deformation of glass-like solids and the effect of stress waves on failure	490
Effect of surface structure on strength properties	491

The pressure exerted during liquid impact	492
Multiple impact experiments at lower velocities	496
The erosion of polymethyl methacrylate	496
The deformation of metals	497
The fracture of brittle solids: crack propagation	499
Conclusion	500
REFERENCES	501
CHAPTER XXIV. SOME EARLY WORK ON SLIDING AND ROLLING FRICTION	502
SLIDING FRICTION	502
ROLLING FRICTION	511
REFERENCES	515
