PART I

HYGROMETRY AND THE DETERMINATION OF THERMAL EFFICIENCY

CHAPTER 1. The Principles of Humidity
<i>Evaporation and Latent Heat—Specific Heat—Vapour Pressure—Evaporation into Air—The Wet-bulb Temperature—The Total Heat—The Constancy of the Wet-bulb Temperature and of the Total Heat during Saturation—Summary.</i>				
CHAPTER 2. The Drying of Clay	10
<i>Shrinkage and Cracking—The Relation between the Rate of Drying and the Condition of the Air.</i>				
CHAPTER 3. Hygrometry, The Measurement of Humidity	18
<i>The Definition of Humidity—Methods of Measuring Humidity.</i>				
CHAPTER 4. Hygrometric Tables	31
<i>The Formula of the Wet- and Dry-bulb Hygrometer—Hygrometric Tables and Charts—New Hygrometric Tables.</i>				
CHAPTER 5. The True Thermal Balance of a Dryer	40
<i>The Heat Input—Comparison of the Thermal Efficiency of Different Dryers—The Heat Output—The Measurements Required for the Comprehensive Thermal Balance—The Thermal Balance—The Moisture Balance.</i>				
CHAPTER 6. Procedure and Measurement	49
<i>The Nature and Duration of the Test—The Measurement of Solid Fuel—The Measurement of Steam—The Measurement of Dryness of Steam—The Measurement of Water Flow, e.g., Condensate—Measurement of Moisture Content or Water Evaporated from Articles—The Measurement of Air Flow.</i>				
CHAPTER 7. Practical Methods of Enquiry into Thermal Efficiency				
I. The Simplest Case	61
<i>The Specific Heat Consumption—The Minimum Value of the Specific Heat Consumption—The Effect of Air Inleakage: Mixtures of Air—Uses of the Specific Heat Consumption.</i>				
CHAPTER 8. Practical Methods of Enquiry into Thermal Efficiency				
II. More detailed investigations involving Heat Losses	68
<i>The Resolution of the Heat Losses—Heat Losses from External Equipment—Losses in Condensate—Losses between Auxiliary Equipment and Dryer—Losses through the Walls and Roof of the Dryer—Losses through the Floor—Heat used in Raising the Temperature of Bricks and Cars—Summary and Consideration of the Total Losses—More Accurate Investigations of Thermal Efficiency.</i>				
CHAPTER 9. Recirculation and Humidity Control	80
<i>Recirculation—Admission of Steam.</i>				

PART II

DRYERS USED IN THE HEAVY CLAY INDUSTRY

CHAPTER 10. Open Air Drying	85
<i>The Hack—Developments from the Hack System of Drying—The Mechanised Rack-and-Pallet System—Large Unheated Sheds—Dryers over Kilns.</i>				
CHAPTER 11. Hot Floor Dryers	91
<i>General Design—Thermal Efficiency—Use of Hot Air from Kilns.</i>				
CHAPTER 12. Tunnel Dryers	94
<i>Counterflow Tunnel Dryers—Tunnel Dryers operating on Hot Air—Tunnel Dryers with Internal Heating Surfaces—The Concurrent Airflow Dryer.</i>				

	Page
CHAPTER 13. Chamber Dryers <i>The Keller System—Chamber Dryers with Bottom Heat and Hot Air—Single and Multi-Chamber Systems—The Odelsky Dryer.</i>	107
CHAPTER 14. Unusual Dryers and Methods of Drying <i>Buhrer, Dorst and Klein Dryers—Cyclical Treatment—Pulsating Air Pressure—Use of Hot Water for Mixing—The Boss Dryer.</i>	115
CHAPTER 15. Drying by Electrical Energy <i>A.C. Resistance Methods—Infra-Red Drying—High Frequency Heating.</i>	118
CHAPTER 16. Summary of Main Points of Comparison of Different Types of Dryers	121

PART III

SURVEY OF THERMAL EFFICIENCY IN PRACTICE

CHAPTER 17. Hot Floor Dryers <i>Descriptions of three Dryers and their Thermal Efficiencies—Discussion of the three Dryers—Approximate Heat Balances.</i>	123
CHAPTER 18. Tunnel Dryers <i>Descriptions of six Dryers and their Thermal Efficiencies—Discussion of Data and Balances—General Discussion of these Tunnel Dryers.</i>	128
CHAPTER 19. Chamber Dryers <i>Descriptions of two Keller Dryers and their Thermal Efficiencies—General Discussion of Chamber (Keller) Dryers.</i>	165
CHAPTER 20. Summary and Comparison of the Thermal Efficiency of Three Types of Dryer <i>Hot Floors—Tunnels—Chambers.</i>	177

NUMBERED TABLES IN THE TEXT

Table I. Observed Temperatures and other Air Data on the two floors ...	127
II. Approximate Heat Balances for the Floors at Works 8 and 9 ...	127
III. Comparison of Floor Areas and Efficiencies	128
IV. Hygrometric Data on Tunnels—Works 11	133
V. Hygrometric Data on Tunnels—Works 12	136
VI. Air Flow to Dryer—Works 33	139
VII. Temperatures of Air Entering and Leaving Supply Duct—Works 33	140
VIII. Temperatures of Air Entering Dryer (°C.)—Works 33	141
IX. Conditions of Atmospheric Air—Works 33	142
X. Exhaust Air handled by Fan—Works 33	144
XI. Conditions inside the Dryer—Works 33	145
XII. Estimation of Leakage from Dryer—Works 33	146
XIII. Moisture Balance of Dryer—Works 33	146
XIV. Heat Balance of Dryer—Works 33	147
XV. Condition of Dryer at time of Subsidiary Test—Works 33	148
XVI. Balance of Dryer at time of Subsidiary Test—Works 33	148
XVII. Air Temperatures and Conditions—Works 34	154
XVIII. Observed Temperatures and Condition of Air—Works 39 ...	159
XIX. Comparison of Heat used per pound Water Evaporated in the Different Tunnel Dryers	164
XX(A). Temperatures of Exhaust Air in Dryer Chamber No. 15—Works 35	167
XX(B). Temperatures of Exhaust Air in Dryer Chambers Nos. 1 and 3 ...	168
XXI. Condition of Exhaust Air from Drying Corridors—Works 37 ...	173
XXII. Comparison of Heat used per pound of Water Evaporated in Two Chamber Dryers. B.Th.U.	176
XXIII. Comparative Heat Requirements/lb. Water evaporated of different types of Dryers. B.Th.U.	178
