## Part I Classical Information

<b>1 Uncertainty, Information, and Entropy</b>	<b>3</b>
1.1 Overview	3
1.1.1 Learning Objectives and Organization	3
1.2 Uncertainty and Information	3
1.2.1 Two Examples	3
1.2.2 Subjective vs. Objective Uncertainty	6
1.3 System, States, and Informational State	7
1.3.1 System and States	7
1.3.2 Informational State	7
1.3.3 Simple vs. Composite Systems	8
1.4 Uncertainty and Entropy	9
1.4.1 Maximal Uncertainty	9
1.4.2 Minimal Uncertainty	10
1.4.3 Entropy	10
1.4.4 Entropy vs. Moments	12
1.5 Axiomatic vs. Operational Definitions of Entropy	13
1.5.1 Axiomatic Definitions of Entropy	13
1.5.2 Operational Definitions of Entropy	13
1.5.3 Outlook	16
1.6 Summary	17
1.7 Recommended Resources	18
Problems	18
References	18
<b>2 Information Quantification by Asking, Compressing, or Sampling: Shannon Entropy</b>	<b>19</b>
2.1 Overview	19
2.1.1 Learning Objectives and Organization	19
2.2 Quantifying Information by Asking	19
2.2.1 The Informational Task of Asking	20

2.2.2	Asking Strategy as a Binary Tree	22
2.2.3	Average Number of Questions	24
2.2.4	Asking Strategy as a Codebook	26
2.3	Huffman Code	27
2.3.1	Uniform Code	27
2.3.2	Huffman Code	28
2.3.3	Optimal Code for Dyadic Distributions	31
2.4	Ideal Codeword Lengths and Shannon Surprise	33
2.4.1	Optimizing the Codeword Lengths	33
2.4.2	Shannon Surprise	35
2.5	Shannon Entropy	37
2.5.1	Defining the Shannon Entropy	38
2.5.2	Shannon Entropy and Minimum Average Codeword Length	39
2.5.3	Properties of the Shannon Entropy	41
2.5.4	Concavity of the Shannon Entropy	43
2.5.5	Thermodynamic Information and Shannon Entropy	45
2.6	Quantifying Information by Compressing	46
2.6.1	Compression	46
2.6.2	Uncertainty and Compression	47
2.6.3	Optimal Compression	48
2.6.4	Compressing vs. Asking	49
2.6.5	Practical Considerations on Huffman Coding for Compression	51
2.7	Quantifying Information as Randomness for Sampling <b>▶▶</b>	52
2.7.1	Sampling	52
2.7.2	Sampling via a Complete Binary Tree	52
2.7.3	Sampling from Dyadic Distributions	54
2.7.4	Sampling from Non-Dyadic Distributions	55
2.8	Summary	55
2.9	Recommended Resources	56
	Problems	56
	Appendix	58
	References	61
<b>3</b>	<b>Information Quantification by Predicting or Guessing: Tsallis Entropy and Rényi Entropy</b>	<b>63</b>
3.1	Overview	63
3.1.1	Learning Objectives and Organization	63
3.2	Information Quantification by Predicting	64
3.2.1	Prediction Loss	64
3.2.2	Average Prediction Loss and Shannon Entropy	65
3.3	$\alpha$ -Log-Loss	66
3.3.1	$\alpha$ -Logarithm	67

3.3.2	$\alpha$ -Log-Loss	68
3.3.3	Properties of the $\alpha$ -Log-Loss <b>▶▶</b>	69
3.3.4	Scoring Rules <b>▶▶</b>	70
3.4	Tsallis Entropy	70
3.4.1	Defining the Tsallis Entropy	70
3.4.2	Tsallis Sum	71
3.4.3	Tsallis Sum and Tsallis Entropy	74
3.4.4	Special Cases of the Tsallis Entropy	74
3.4.5	Properties of the Tsallis Entropy	78
3.5	Quantifying Information by Guessing	80
3.5.1	Guessing	80
3.5.2	Guessing vs. Asking	81
3.5.3	Optimal Guessing	81
3.5.4	Optimal Guessing and Entropy <b>▶▶</b>	83
3.6	Rényi Entropy	85
3.6.1	Defining the Rényi Entropy	86
3.6.2	Rényi Entropy and Tsallis Sum	87
3.6.3	Special Cases of the Rényi Entropy	87
3.6.4	Properties of the Rényi Entropy	90
3.7	Quantifying Information via Compression Beyond Average Codeword Length <b>▶▶</b>	93
3.7.1	Compression Design Problem	93
3.7.2	Escort Distribution	94
3.7.3	Optimal Code	96
3.8	Unifying Entropies <b>▶▶</b>	97
3.9	Summary	98
3.10	Recommended Resources	99
	Problems	100
	Appendix	101
	References	109
<b>4</b>	<b>Relative Entropy</b>	<b>111</b>
4.1	Overview	111
4.1.1	Learning Objectives and Organization	112
4.2	Shannon Relative Entropy	112
4.2.1	Mismatched Prediction	112
4.2.2	Impossible States, Black Swans, and Hallucinations	112
4.2.3	Shannon Cross Entropy	115
4.2.4	Other Mismatched Informational Tasks	116
4.2.5	Shannon Relative Entropy	117
4.2.6	Properties of the Shannon Relative Entropy	121
4.3	Monotonicity of the Shannon Entropy	122
4.4	Tsallis Relative Entropy and Monotonicity of the Tsallis Entropy	123

4.4.1	Defining the Tsallis Relative Entropy	123
4.4.2	Equivalent Definition of the Tsallis Relative Entropy	125
4.4.3	Properties of the Tsallis Relative Entropy	126
4.4.4	Tsallis Relative Sum	129
4.4.5	Properties of the Tsallis Relative Sum <b>▶▶</b>	132
4.4.6	Tsallis Relative Entropy and Tsallis Relative Sum <b>▶▶</b>	133
4.4.7	Special Cases of the Tsallis Relative Entropy <b>▶▶</b>	133
4.4.8	$\alpha$ -Relative Entropy <b>▶▶</b>	135
4.4.9	Monotonicity of the Tsallis Entropy	136
4.5	Fidelity <b>▶▶</b>	137
4.5.1	Defining the Fidelity	138
4.5.2	Chernoff Fidelity	138
4.6	Rényi Relative Entropy and Monotonicity of the Rényi Entropy	139
4.6.1	Defining the Rényi Relative Entropy	139
4.6.2	Rényi Relative Entropy and Tsallis Relative Sum <b>▶▶</b>	140
4.6.3	Properties of the Rényi Relative Entropy <b>▶▶</b>	140
4.6.4	Special Cases of the Rényi Relative Entropy <b>▶▶</b>	142
4.6.5	Monotonicity of the Rényi Entropy	143
4.7	Optimal Detection, Relative Entropy, and Trace Distance	144
4.7.1	Optimal Detection	144
4.7.2	Trace Distance	147
4.7.3	Properties of the Trace Distance	148
4.8	Unifying Relative Entropies via $f$ -Divergences <b>▶▶</b>	149
4.9	Summary	151
4.10	Recommended Resources	151
	Problems	152
	Appendix	154
	References	156

## Part II Quantum Information

<b>5</b>	<b>From Classical to Quantum Information</b>	<b>159</b>
5.1	Overview	159
5.1.1	Learning Objectives and Organization	160
5.2	Classical vs. Quantum Information	160
5.2.1	Classical Information	160
5.2.2	Quantum Information	161
5.2.3	Quantum Pure States vs. Quantum Mixed States	163
5.2.4	What Is a Quantum State?	164
5.3	Reviewing Classical Uncertainty through Dirac's Notation	164
5.3.1	Transposition, Inner Product, and Norm	164
5.3.2	Transposition for Matrices	165
5.3.3	Basis	166
5.3.4	Ket Notation	167

5.3.5	Classical Pure States as Kets	168
5.3.6	Computational Basis	168
5.4	Quantum Pure States	170
5.4.1	Quantum Pure States	170
5.4.2	Bra and Inner Product	171
5.4.3	Beyond the Computational Basis	173
5.4.4	Unitary Matrices and Orthonormal Bases	175
5.4.5	Resolution of the Identity	177
5.5	Complete Quantum Measurements	178
5.5.1	Measurement Setting	178
5.5.2	Classical Output	179
5.5.3	Post-Measurement State	183
5.5.4	Summary and Examples	184
5.5.5	Observables	186
5.6	Distinguishing Quantum States	188
5.6.1	Distinguishing Quantum States	188
5.6.2	Fidelity	190
5.6.3	Trace Distance	191
5.7	Summary	192
5.8	Recommended Resources	193
	Problems	193
	Appendix	194
	References	195
<b>6</b>	<b>Quantum Uncertainty: Measured Entropy, Coherence, and the Uncertainty Principle</b>	<b>196</b>
6.1	Overview	196
6.1.1	Learning Objectives and Organization	197
6.2	Quantum Uncertainty	197
6.2.1	Measured Entropy	197
6.2.2	Optimizing the Measured Entropy	198
6.3	Coherence	200
6.3.1	Defining Coherence	200
6.3.2	Trace Distance of Coherence <b>▶▶</b>	201
6.3.3	Coherence and Disturbance	203
6.3.4	Coherence as a Resource <b>▶▶</b>	204
6.4	Compatibility of Measurements and Uncertainty Inequality <b>▶▶</b>	205
6.4.1	Uncertainty Principle	205
6.4.2	Compatibility of Measurement Settings	206
6.4.3	Compatibility Measure	208
6.4.4	Uncertainty Inequality	211
6.4.5	Uncertainty Principle and Simultaneous Measurements	212
6.4.6	Generalizations of the Uncertainty Inequality	213
6.5	Projective Measurements	214

6.5.1	Partial Measurements	214
6.5.2	Partial Classical Measurement	215
6.5.3	Complete Quantum Measurement via Projection	216
6.5.4	Projection Matrices and Span	218
6.5.5	Projective Measurements	221
6.5.6	Direct Definition of Projective Measurements	225
6.5.7	Measured Entropy for Projective Measurements	225
6.6	Normal Matrices and Spectral Theorem	226
6.6.1	Normal Matrices	226
6.6.2	Spectral Theorem	228
6.6.3	Examples	230
6.6.4	Positive Semi-Definite Matrices	232
6.6.5	Function of a Normal Matrix	233
6.6.6	Schatten Norm	234
6.7	Summary	235
6.8	Recommended Resources	236
	Problems	236
	Appendix	237
	References	239
<b>7</b>	<b>Classical and Quantum Uncertainty: Mixed States and Quantum Entropy</b>	<b>240</b>
7.1	Overview	240
7.1.1	Learning Objectives and Organization	241
7.2	Uncertain Quantum States	241
7.2.1	Ensembles of Pure States	242
7.2.2	Measuring an Ensemble of Pure States	242
7.3	From Ensembles of Pure States to Density Matrices	243
7.3.1	Density Matrices for Pure States	244
7.3.2	Density Matrices for Ensembles of Pure States	244
7.3.3	Equivalent Ensembles	247
7.4	Projective Measurements of Mixed States	250
7.4.1	Trace	250
7.4.2	Born Rule for Projective Measurements and Mixed States	252
7.5	From Density Matrices to Ensembles of Pure States	255
7.5.1	Defining Properties of a Density Matrix	256
7.5.2	Eigenensemble	256
7.6	Uncertainty Inequality for Observables <b>▶▶</b>	259
7.6.1	Observables as Hermitian Matrices	259
7.6.2	Compatible Observables	261
7.6.3	Uncertainty Inequality	263
7.7	Measured Entropy for Mixed States	265
7.8	Quantum Entropy	267
7.8.1	Defining the Quantum Entropy	268

7.8.2	Properties of the Quantum Entropy	270
7.9	Shannon, Tsallis, and Rényi Quantum Entropy	271
7.9.1	Background	271
7.9.2	Shannon Quantum Entropy	271
7.9.3	Thermodynamic Information and Shannon Quantum Entropy ▶▶	274
7.10	Tsallis Trace ▶▶	274
7.10.1	Introducing the Tsallis Trace	274
7.10.2	Special Cases of the Tsallis Trace	276
7.10.3	Tsallis Trace, Tsallis Quantum Entropy, and Rényi Quantum Entropy	276
7.10.4	Special Cases of the Tsallis Quantum Entropy	277
7.10.5	Special Cases of the Rényi Quantum Entropy	278
7.11	Non-Selective Measurements ▶▶	279
7.11.1	Defining Non-Selective Measurements	279
7.11.2	Non-Selective Complete Measurements Increase Quantum Entropy	281
7.12	Coherence for Mixed States ▶▶	282
7.12.1	Defining Coherence for Mixed States	282
7.12.2	Coherence Measures for Mixed States	285
7.12.3	Uncertainty Inequality for Mixed States	287
7.13	Decomposing Square Matrices ▶▶	288
7.13.1	Orthonormal Basis of Matrices	288
7.13.2	Orthonormal Basis of Rank-1 Matrices	289
7.13.3	Orthonormal Basis of Observables	289
7.13.4	Basis of Density Matrices	291
7.14	Summary	292
7.15	Recommended Resources	293
	Problems	293
	Appendix	295
	References	299
<b>8</b>	<b>Quantum Relative Entropy</b>	<b>300</b>
8.1	Overview	300
8.1.1	Learning Objectives and Organization	301
8.2	Shannon Quantum Relative Entropy	301
8.2.1	Defining the Shannon Quantum Relative Entropy Using Eigendecompositions: Commuting Density Matrices	302
8.2.2	Defining the Shannon Quantum Relative Entropy Using Eigendecompositions: General Density Matrices	303
8.2.3	Impossible States, Black Swans, and Hallucinations	306
8.2.4	Defining the Shannon Quantum Relative Entropy Using Density Matrices	310

8.2.5	Non-Negativity of the Quantum Relative Entropy	313
8.2.6	Monotonicity of the Shannon Quantum Entropy	314
8.2.7	Other Definitions of the Shannon Quantum Relative Entropy ▶▶	314
8.3	Tsallis Quantum Relative Entropy ▶▶	315
8.3.1	Defining the Tsallis Relative Trace	315
8.3.2	Bounds on the Tsallis Relative Trace	318
8.3.3	Tsallis Quantum Relative Entropy	320
8.3.4	Special Cases of the Tsallis Quantum Relative Entropy	322
8.3.5	Monotonicity of the Tsallis Quantum Entropy	323
8.4	Fidelity between Mixed States ▶▶	323
8.4.1	Fidelity: A Recap	323
8.4.2	Fidelity for Quantum Mixed States	324
8.4.3	Tsallis Fidelity	325
8.4.4	Chernoff Fidelity	325
8.4.5	Uhlmann–Josza Fidelity	327
8.5	Rényi Quantum Relative Entropy	330
8.5.1	Defining the Rényi Quantum Relative Entropy	330
8.5.2	Special Cases of the Rényi Quantum Relative Entropy	331
8.5.3	Monotonicity of the Rényi Quantum Entropy	332
8.6	Optimal Detection, Quantum Relative Entropies, and Trace Distance	332
8.6.1	Detecting Mixed States	333
8.6.2	Optimal Detection with Perfect Detection for One State	333
8.6.3	Optimal Detection under the Average Detection Probability	334
8.6.4	Trace Distance	336
8.6.5	Properties of the Trace Distance	336
8.6.6	Disturbance and Information	339
8.7	Purification and Fidelity ▶▶	339
8.7.1	Introducing Purification	339
8.7.2	Reproducing the Behavior of a Mixed State in the Purified Space	341
8.7.3	Uhlmann–Josza Fidelity Revisited	343
8.8	Kronecker Product and Purification	344
8.8.1	Kronecker Product for Vectors	344
8.8.2	Direct Sum	345
8.8.3	Bi-Index Notation	346
8.8.4	Purification via the Kronecker Product ▶▶	349
8.8.5	Kronecker Product for Matrices	351
8.8.6	Measurements on the Purified State	354
8.9	More on the Kronecker Product ▶▶	355
8.9.1	Properties of the Kronecker Product	355
8.9.2	Pauli Strings	356
8.10	Summary	358

8.11	Recommended Resources	359
	Problems	359
	Appendix	362

## Part IV Bipartite Classical Information

<b>12</b>	<b>Bipartite Classical Information as Correlation</b>	<b>477</b>
12.1	Overview	477
	12.1.1 Learning Objectives and Organization	477
12.2	What Is Correlation?	478
	12.2.1 Correlation as Redundancy	479
	12.2.2 Correlation as a Resource <b>▶▶</b>	479
	12.2.3 Correlation as Common Sampling Randomness	480
	12.2.4 Correlation as Common Distillable Randomness	480
12.3	Joint Entropy	481
	12.3.1 Joint Distribution	481
	12.3.2 Joint Entropy	484
12.4	Local Entropies	486
	12.4.1 Marginal Distributions	486
	12.4.2 Local Entropies	488
12.5	Joint Entropy vs. Local Entropies	488
	12.5.1 Uncorrelated Subsystems	488
	12.5.2 Additivity of the Shannon Joint Entropy	490
	12.5.3 Subadditivity of the Shannon Joint Entropy	492
	12.5.4 Additivity Beyond Shannon?	492
	12.5.5 Subadditivity Beyond Shannon?	493
	12.5.6 Uncertainty Increases Globally	494
12.6	Correlation as Redundancy	496
	12.6.1 Shannon Mutual Information	496
	12.6.2 Properties of the Shannon Mutual Information	498
12.7	Correlation as a Resource	499
	12.7.1 Relative Entropy of Correlation	499
	12.7.2 Local Channels <b>▶▶</b>	502
	12.7.3 Data Processing Inequality Under Local Channels <b>▶▶</b>	503
	12.7.4 Tsallis Mutual Information and Rényi Mutual Information <b>▶▶</b>	506
	12.7.5 Optimal Detection of Correlated Random Variables <b>▶▶</b>	507
	12.7.6 Local Randomness Required to Destroy Correlations <b>▶▶</b>	508
12.8	Correlation as Common Sampling Randomness <b>▶▶</b>	508
	12.8.1 Distributed Sampling	508
	12.8.2 Distributed-Sampling Common Information	510
12.9	Correlation as Distillable Common Information <b>▶▶</b>	511

12.9.1	Distributed Distillation	511
12.9.2	Distillable Common Information	512
12.9.3	Maximal Correlation	515
12.9.4	Defining the Maximal Correlation	515
12.9.5	Properties of the Maximal Correlation	516
12.10	Summary	517
12.11	Recommended Resources	517
	Problems	518
	Appendix	519
	References	527
<b>13</b>	<b>Bipartite Classical Information via Residual Uncertainty</b>	<b>528</b>
13.1	Overview	528
13.1.1	Learning Objectives and Organization	529
13.2	Conditional Distributions	529
13.2.1	Defining Conditional Distributions	530
13.2.2	Chain Rule for the Joint Distribution	532
13.2.3	Chain Rule for the Shannon Surprise	533
13.2.4	Conditional Distributions as Channels <b>▶▶</b>	534
13.3	Ensemble Entropy	535
13.3.1	Ensemble of Conditional Probability Distributions	535
13.3.2	Ensemble Entropy	536
13.3.3	Properties of the Ensemble Entropy	538
13.3.4	Operational Interpretation of the Ensemble Entropy	540
13.4	Locally Accessible Information, aka Expected Information Gain	540
13.4.1	Defining the Locally Accessible Information	540
13.4.2	Properties of the Locally Accessible Information	541
13.4.3	Conditioning Reduces the Ensemble Entropy	543
13.4.4	The Shannon Locally Accessible Information Is the Shannon Mutual Information	544
13.4.5	Shannon Mutual Information and Shannon Relative Entropy Revisited <b>▶▶</b>	545
13.5	Conditional Entropy	546
13.5.1	Defining the Shannon Conditional Entropy	546
13.5.2	Shannon Conditional Entropy and Shannon Ensemble Entropy	548
13.5.3	Shannon Conditional Entropy and Shannon Relative Entropy <b>▶▶</b>	549

## Part V Bipartite Quantum Information

<b>14 Bipartite Classical and Quantum Information for Pure States</b>	<b>563</b>
14.1 Overview	563
14.1.1 Learning Objectives and Organization	564
14.2 Bipartite Quantum Pure States	564
14.2.1 Defining Bipartite Quantum Pure States	565
14.2.2 Uncorrelated vs. Entangled Pure States	566
14.2.3 Joint Distributions vs. Quantum States <b>▶▶</b>	569
14.3 Local Measurements	570
14.3.1 Local POVMs at Both Subsystems	570
14.3.2 Local POVMs at One Subsystem Only	573
14.3.3 No-Signaling Theorem	575
14.4 Entanglement and Superposition	577
14.4.1 Entangled States as Superpositions of Uncorrelated States	577
14.4.2 Identifying Entangled States	579
14.4.3 Orthonormal Bases of Entangled States	580
14.5 Reduced Density Matrices	580
14.5.1 Amplitude Matrix	581
14.5.2 Defining Reduced Density Matrices	583
14.5.3 Properties of the Reduced Density Matrices	585
14.5.4 Entanglement and Reduced Density Matrices	586
14.6 Classical Correlations in Quantum Pure States	586
14.6.1 Maximum Measured Mutual Information	587
14.7 Classical and Quantum Correlations in Quantum Pure States	590
14.7.1 Quantum Local Entropies	590
14.7.2 Quantum Joint Entropy	591
14.7.3 Insubordination (Uncertainty Decreases Globally)	591
14.7.4 Quantum Mutual Information	592
14.7.5 Entanglement Entropy	593
14.7.6 Properties of the Quantum Mutual Information	594
14.7.7 Maximally Entangled States	595
14.7.8 Distinguishing Classical and Quantum Correlations <b>▶▶</b>	597
14.7.9 Entanglement Entropy Using Alternative Entropy Measures <b>▶▶</b>	599
14.8 Quantum Conditional Entropy	600
14.8.1 Classical Conditional Entropy: A Recap	600
14.8.2 Defining the Quantum Conditional Entropy	600
14.8.3 Properties of the Quantum Conditional Entropy	601
14.8.4 All You Need Are the Schmidt Probabilities	602

14.9	Schmidt Decomposition	603
14.9.1	Defining the Schmidt Decomposition	603
14.9.2	Deriving the Schmidt Decomposition <b>▶▶</b>	605
14.9.3	Schmidt Decomposition and Majorization <b>▶▶</b>	607
14.10	Partial Trace	608
14.10.1	Defining the Partial Trace	608
14.10.2	Computing Reduced Density Matrices via the Partial Trace	609
14.10.3	Partial Trace as a “Sandwich” Operation	610
14.11	Summary	611
14.12	Recommended Resources	612
	Problems	613
	Appendix	615
	References	617
