

CONTENTS

PART 1

Fundamentals of Fluid Mechanics and Transport 1

Chapter 1

Fluid Properties 2

- 1.1 Continuum 3
- 1.2 Definition of a Fluid 3
- 1.3 Dimensions and Units 5
- 1.4 Viscosity 8
- 1.5 Mass, Weight, and Concentration Variables 11
- 1.6 Temperature and Thermodynamic Variables 14
- 1.7 Pressure and a Perfect Gas 15
- 1.8 Bulk Modulus of Elasticity 18
- 1.9 Vapor Pressure 19
- 1.10 Surface Tension 20

Chapter 2

Fluid Statics 30

- 2.1 Force, Stress, and Pressure at a Point 31
- 2.2 Basic Equation of Fluid Statics 35
- 2.3 Units and Scales of Pressure Measurement 40
- 2.4 Manometers 44
- 2.5 Forces on Plane Areas 49
- 2.6 Force Components on Curved Surfaces 58
- 2.7 Buoyant Force 65
- 2.8 Stability of Floating and Submerged Bodies 68
- 2.9 Relative Equilibrium 71

Chapter 3

Fluid Flow Concepts and Basic Control Volume Equations 102

- 3.1 Flow Concepts and Kinematics 103
- 3.2 The General Control Volume Conservation Equation 113
- 3.3 The Conservation of Mass 115
- 3.4 The Energy Equation 118

- 3.5 Application of the Energy Equation to Steady Fluid-Flow Situations 124
- 3.6 The Control Volume Linear-Momentum Equation 133
- 3.7 Applications of the Linear Momentum Equation 136
- 3.8 The Moment-of-Momentum Equation 155
- 3.9 Heat and Mass Transfer 158

Chapter 4

Basic Governing Differential Equations 185

- 4.1 Kinematics, Motion, and Deformation 186
- 4.2 The General Reynolds Transport Equation 195
- 4.3 The Continuity Equation 196
- 4.4 The Momentum Equation 198
- 4.5 The Conservation of Mechanical Energy and the Bernoulli Equation 202
- 4.6 The Energy Equation 208
- 4.7 The Differential Heat Equation 211
- 4.8 Differential Mass Balance for a Species 212

Chapter 5

Dimensional Analysis and Dynamic Similitude 224

- 5.1 Dimensional Homogeneity and Dimensionless Ratios 225
- 5.2 Dimensions and Units 227
- 5.3 The Π Theorem: Momentum and Energy 228
- 5.4 The Π Theorem: Heat and Mass Transport 240
- 5.5 Nondimensional Analysis of Governing Equations 243
- 5.6 Model Studies and Similitude 247

Chapter 6

Viscous Flow: Pipes and Channels 259

- 6.1 Laminar and Turbulent Flows: Internal and External Flows 260

- 6.2 Laminar, Incompressible, Steady Flow Between Parallel Plates 263
- 6.3 Laminar Flow Through Circular Tubes and Circular Annuli 268
- 6.4 Turbulent Flow Relations 273
- 6.5 Turbulent Flow Losses in Open and Closed Conduits 283
- 6.6 Steady Uniform Flow in Open Channels 285
- 6.7 Steady Incompressible Flow Through Simple Pipes 288
- 6.8 Minor Losses 298

Chapter 7**External Flows 315**

- 7.1 Shear and Pressure Forces 316
- 7.2 Boundary Layer Concepts: Flat Plates 318
- 7.3 Flow and Drag: Spheres 325
- 7.4 The Effect of Pressure Gradients: Separation and Wakes 328
- 7.5 Drag on Immersed Bodies 332
- 7.6 Lift 337
- 7.7 Acceleration and Inertial Forces 340

Chapter 8**Ideal-Fluid Flow 346**

- 8.1 Requirements for Ideal-Fluid Flow 347
- 8.2 Euler's Equation of Motion 347
- 8.3 Irrotational Flow: Velocity Potential 350
- 8.4 Integration of Euler's Equation: Bernoulli's Equation 352
- 8.5 Stream Functions and Boundary Conditions 354
- 8.6 Two-Dimensional Flows 359
- 8.7 Water Waves: A Moving Boundary Problem 370

Chapter 9**Transport by Advection and Diffusion 378**

- 9.1 Steady Molecular Diffusion and Conduction 379
- 9.2 Advection and Convection: Bulk Approaches 389
- 9.3 Laminar Boundary Layer Transport 398
- 9.4 Turbulent Transport Relations 402
- 9.5 Turbulent Diffusion 405
- 9.6 Channel Diffusion and Dispersion 416
- 9.7 Applications of Diffusion and Dispersion Techniques 424

PART 2**Applications of Fluid Mechanics and Transport 443****Chapter 10****Measurements 444**

- 10.1 System Attributes and Functions 445
- 10.2 Pressure Measurement 451
- 10.3 Elevation Measurement 453
- 10.4 Temperature Measurement 456
- 10.5 Velocity Measurement 456
- 10.6 Rate Devices: Orifices 466
- 10.7 Venturi Meter, Nozzle, and Other Conduit Rate Measuring Devices 474
- 10.8 Open-Channel Rate Devices 479
- 10.9 Particle Concentration Measurements 487
- 10.10 Measurement of Viscosity 493

Chapter 11**Turbomachinery 505**

- 11.1 Homologous Units: Specific Speed 506
- 11.2 Elementary Cascade Theory 512
- 11.3 Theory of Turbomachines 514
- 11.4 Reaction Turbines 518
- 11.5 Pumps and Blowers 522
- 11.6 Impulse Turbines 529
- 11.7 Cavitation 534

Chapter 12**Closed-Conduit Flow 541**

- 12.1 Steady Flow: Exponential Pipe-Friction Formulas 542
- 12.2 Steady Flow: Hydraulic and Energy Grade Lines 543
- 12.3 Steady Flow: Pipeline Systems 550
- 12.4 Steady Flow: Networks of Pipes 559
- 12.5 Steady Flow: Methodologies for Complex Hydraulic Networks 561
- 12.6 Steady Flow: Noncircular Conduits, Aging of Pipes, and Additives 566
- 12.7 Unsteady Flow: Oscillation of Liquid in a U Tube 568
- 12.8 Unsteady Flow: Establishment of Flow 576
- 12.9 Unsteady Flow: Description of the Waterhammer Phenomenon 578
- 12.10 Unsteady Flow: Differential Equations for Calculation of Waterhammer 580
- 12.11 Unsteady Flow: The Method of Characteristics Solution 583

Chapter 13

- Flow in Open Channels** 605
- 13.1 Classification of Flow 606
 - 13.2 Best Hydraulic Channel Cross Sections 607
 - 13.3 Steady Uniform Flow in a Floodway 609
 - 13.4 Hydraulic Jump and Stilling Basins 610
 - 13.5 Specific Energy and Critical Depth 614
 - 13.6 Transitions 617
 - 13.7 Gradually Varied Flow 620
 - 13.8 Classification of Surface Profiles 626
 - 13.9 Control Sections 628
 - 13.10 Computer Calculation of Gradually Varied Flow 629
 - 13.11 Frictionless Positive Surge Wave in a Rectangular Channel 631
 - 13.12 Frictionless Negative Surge Wave in a Rectangular Channel 633

Chapter 14

- Applications of Transport Phenomena** 643
- 14.1 Engineered versus Geoenvironmental Transport 643
 - 14.2 Multiphase Flows: Particle Transport 646
 - 14.3 Coupled Flow and Transport: Stratified Boundary Layer 660
 - 14.4 Interfacial Transfer: Evaporation 671
 - 14.5 Process Reactors and Tanks 685
 - 14.6 Mechanical Mixing and Agitation 695

Appendices 707**Appendix A****Force Systems, Moments, and Centroids** 707

- A.1 Simple Force Systems 707
- A.2 First and Second Moments: Centroids 707

Appendix B**Computer Programming Aids** 711**Appendix C****Physical Properties of Fluids** 712**Appendix D****Variable Notation** 717**Appendix E****Vector Operations and Notation** 722

- E.1 Notation and Definitions 722
- E.2 Vector Algebra 723
- E.3 Vector Operations 724
- E.4 Unit Normals and Planes 725
- E.5 Differential Operations 726

Appendix F**Answers to Even-Numbered Problems** 728
