
CONTENTS

	Preface	xiii
Chapter 1	Introduction and Concepts	1
1-1	Conduction	2
1-2	Convection	5
1-3	Radiation	8
1-4	Combined Heat Transfer Mechanism	13
1-5	Units, Dimensions, and Conversion Factors	14
1-6	Summary of Basic Relations	17
	Problems	18
	References	21
	Short Bibliography of Textbooks in Heat Transfer	21
Chapter 2	Conduction—Basic Equations	23
2-1	One-Dimensional Heat Conduction Equation	23
2-2	Three-Dimensional Heat Conduction Equation	29
2-3	Boundary Conditions	31
2-4	Summary of Basic Equations	36
	Problems	38
	References	41
Chapter 3	One-Dimensional, Steady-State Heat Conduction	42
3-1	The Slab	42
3-2	The Cylinder	49
3-3	The Sphere	55
3-4	Composite Medium	59
3-5	Thermal Contact Resistance	65
3-6	Critical Thickness of Insulation	68

3-7	Finned Surfaces	71
3-8	Temperature-Dependent $k(T)$	82
3-9	Summary of Basic Relations	85
	Problems	87
	References	100
Chapter 4	Transient Conduction and Use of Temperature Charts	101
4-1	Lumped-System Analysis	101
4-2	Slab—Use of Transient-Temperature Charts	108
4-3	Long Cylinder and Sphere—Use of Transient-Temperature Charts	114
4-4	Semi-infinite Solid—Use of Transient-Temperature Charts	120
4-5	Product Solution—Use of Transient-Temperature Charts	124
4-6	Two-Dimensional, Steady-State Heat Conduction—Use of Conduction Shape Factors	130
4-7	Transient Heat Conduction in a Slab—Analytic Solution	134
4-8	Transient Heat Conduction in a Slab—Use of Tabulated Solutions	141
	Problems	146
	References	154
Chapter 5	Finite-Difference Methods for Solving Heat Conduction Problems	156
5-1	One-Dimensional, Steady-State Heat Conduction	157
5-2	Boundary Conditions	160
5-3	Two-Dimensional, Steady-State Heat Conduction	169
5-4	Methods of Solving Simultaneous Algebraic Equations	177
5-5	Cylindrical and Spherical Symmetry	181
5-6	Unsteady Heat Conduction—Explicit Method	188
5-7	Unsteady Heat Conduction—Implicit Method	202
	Problems	206
	References	224
Chapter 6	Convection—Concepts and Basic Relations	226
6-1	Flow over a Body	227
6-2	Flow inside a Duct	238
6-3	Concepts on Turbulence	245
6-4	Equations of Motion	253
6-5	Equation of Energy	261
6-6	Dimensionless Parameters	267
6-7	Boundary-Layer Equations	270
	Problems	271
	References	279

Chapter 7	Forced Convection for Flow inside Ducts	281
7-1	Hydrodynamically and Thermally Developed Laminar Flow	282
7-2	Thermally Developing, Hydrodynamically Developed Laminar Flow	299
7-3	Simultaneously Developing Laminar Flow	305
7-4	Turbulent Flow inside Ducts	310
7-5	Heat Transfer to Liquid Metals	322
7-6	Analogies between Heat and Momentum Transfer in Turbulent Flow	328
7-7	Heat Transfer Augmentation	332
7-8	Summary of Correlations	336
	Problems	339
	References	347
Chapter 8	Forced Convection for Flow over Bodies	352
8-1	Drag Coefficient for Flow over a Flat Plate	352
8-2	Heat Transfer Coefficient for Flow over a Flat Plate	361
8-3	Flow across a Single Circular Cylinder	373
8-4	Flow across a Single Noncircular Cylinder	381
8-5	Flow across a Single Sphere	382
8-6	Flow across Tube Bundles	385
8-7	Heat Transfer in High-Speed Flow over a Flat Plate	397
8-8	Summary of Correlations	404
	Problems	404
	References	410
	Notes	413
Chapter 9	Free Convection	416
9-1	Dimensionless Parameters of Free Convection	418
9-2	An Approximate Analysis of Laminar Free Convection on a Vertical Plate	422
9-3	Correlations of Free Convection on a Vertical Plate	430
9-4	Free Convection on a Horizontal Plate	436
9-5	Free Convection on an Inclined Plate	439
9-6	Free Convection on a Long Cylinder	443
9-7	Free Convection on a Sphere	447
9-8	Simplified Equations for Air	448
9-9	Mechanism of Free Convection in Enclosed Spaces	449
9-10	Correlations of Free Convection in Enclosed Spaces	452
9-11	Combined Free and Forced Convection	459
9-12	Summary of Correlations for Heat Transfer in Free Convection	462
	Problems	467
	References	472
Chapter 10	Boiling and Condensation	476
10-1	Film Condensation Theory	477
10-2	Comparison of Film Condensation Theory with Experiments	483

10-3	Film Condensation inside Horizontal Tubes	487
10-4	Dropwise Condensation	489
10-5	Condensation in the Presence of Noncondensable Gas	490
10-6	Pool Boiling Regimes	491
10-7	Pool Boiling Correlations	493
10-8	Forced-Convection Boiling inside Tubes	505
10-9	Summary of Equations	514
	Problems	516
	References	519
Chapter 11	Heat Exchangers	524
11-1	Classification of Heat Exchangers	525
11-2	Temperature Distribution in Heat Exchangers	536
11-3	Overall Heat Transfer Coefficient	538
11-4	The LMTD Method for Heat Exchanger Analysis	545
11-5	Correction for LMTD for Use with Cross-Flow and Multipass Exchangers	553
11-6	ϵ -NTU Method for Heat Exchanger Analysis	559
11-7	Compact Heat Exchangers	571
11-8	Heat Exchanger Optimization	582
	Problems	584
	References	590
Chapter 12	Radiation among Surfaces in a Nonparticipating Medium	593
12-1	Nature of Thermal Radiation	593
12-2	Blackbody Radiation	595
12-3	Radiation from Real Surfaces	604
12-4	Radiation Incident on a Surface	606
12-5	Radiation Properties of Surfaces	608
12-6	Solar Radiation	617
12-7	Concept of View Factor	624
12-8	Methods of Determining View Factors	631
12-9	Network Method for Radiation Exchange in an Enclosure	643
12-10	Radiosity Matrix Method for Radiation Exchange in an Enclosure	657
12-11	Correction for Radiation Effects in Temperature Measurements	667
12-12	Summary of Equations	668
	Problems	670
	References	683
Chapter 13	Radiation in Absorbing, Emitting Media	685
13-1	Equation of Radiative Transfer	685
13-2	Transmissivity, Absorptivity, and Emissivity	687
13-3	Radiation Exchange between a Gas Body and Its Black Enclosure	690

13-4	Radiation Flux from an Absorbing, Emitting Slab at Uniform Temperature—An Analytic Solution	698
	Problems	700
	References	701
Chapter 14	Mass Transfer	702
14-1	Definitions of Mass Flux	703
14-2	Steady-State Equimodal Counterdiffusion in Gases	706
14-3	Steady-State Unidirectional Diffusion in Gases	708
14-4	Steady-State Diffusion in Liquids	711
14-5	Unsteady Diffusion	713
14-6	Mass Diffusivity	716
14-7	Mass Transfer in Laminar and Turbulent Flow	722
	Problems	729
	References	730
	Appendixes	733
A	Conversion Factors	733
B	Physical Properties	736
C	Radiation Properties	756
D	Error Function, Roots of Transcendental Equations, and Exponential Integral Function	763
E	Dimensional Data for Tubes and Steel Pipes	769
	Indexes	771
	Name Index	
	Subject Index
