<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Preamble . . . . .	1
1.2	Objectives and Layout . . . . .	3
<b>2</b>	<b>Governing Differential Equations</b>	<b>7</b>
2.1	Introduction . . . . .	7
2.2	Governing Equations . . . . .	8
2.3	Constitutive Equation . . . . .	9
2.3.1	Viscous shear flow . . . . .	9
2.3.2	Inelastic generalised Newtonian flow . . . . .	11
2.3.3	Power law fluid . . . . .	11
2.4	Elastic Liquids . . . . .	13
2.4.1	Maxwell model . . . . .	13
2.4.2	Oldroyd's liquid B model . . . . .	14
2.4.3	White-Metzner model . . . . .	14
2.5	Equation in Steady State Flow . . . . .	14
2.6	Initial and Boundary Conditions . . . . .	15
2.7	Stream Function . . . . .	16
<b>3</b>	<b>Finite Element Method</b>	<b>23</b>
3.1	Introduction . . . . .	23
3.2	Variational Principle and Rayleigh-Ritz Method . . . . .	26
3.3	Galerkin Weighted Residual Method . . . . .	31
3.4	Virtual Work Principle . . . . .	33
3.5	Finite Element Method in Two Dimensions . . . . .	35
3.5.1	Introduction . . . . .	35
3.5.2	<b>K</b> Matrix and load vector . . . . .	36
3.5.3	Triangular elements . . . . .	37

3.5.4	Natural coordinate system . . . . .	46
3.5.5	Numerical integration . . . . .	49
<b>4</b>	<b>Steady Non-Newtonian Flow</b>	<b>53</b>
4.1	Introduction . . . . .	53
4.2	Creeping Motion . . . . .	56
4.2.1	Extra stress and strain rate relations . . . . .	57
4.3	Finite Element Formulation for Creeping Flow . . . . .	57
4.3.1	Finite element spatial discretisation . . . . .	58
4.3.2	Slippage and friction . . . . .	61
4.3.3	Numerical examples . . . . .	63
<b>5</b>	<b>Temporal Discretisation</b>	<b>75</b>
5.1	Introduction . . . . .	75
5.1.1	Transient Newtonian flow equations in two dimensions . . . . .	76
5.1.2	Boundary conditions . . . . .	76
5.2	Finite Element Formulation . . . . .	77
5.3	Temporal Discretisation . . . . .	83
5.3.1	Generalized trapezoidal and mid-point family of methods . . . . .	83
5.3.2	High order scheme - Taylor series in time . . . . .	85
5.3.3	Predictor-corrector scheme . . . . .	86
5.3.4	Automatic time step selection . . . . .	88
5.4	Solution of Nonlinear System of Equations . . . . .	91
<b>6</b>	<b>Finite Element Analysis for Transient non-Newtonian Flow</b>	<b>95</b>
6.1	Introduction . . . . .	95
6.2	The Taylor-Galerkin Method . . . . .	100
6.3	The Pressure Correction Method . . . . .	101
6.3.1	Pressure correction method with midpoint rule	102
6.3.2	Pressure correction method with higher order scheme . . . . .	103
6.3.3	Stability considerations . . . . .	104
6.4	Transient Non-Newtonian Flow . . . . .	105
6.4.1	Transient Generalised Newtonian Flow . . . . .	105
6.4.2	Oldroyd's liquid B model . . . . .	106

6.5	Non-isothermal Flow . . . . .	106
6.6	Adaptive Analysis . . . . .	109
6.7	Error Estimation for Fluid Flow . . . . .	113
6.8	Numerical Examples . . . . .	115
6.8.1	Newtonian flow . . . . .	115
6.8.2	Non-Newtonian flow . . . . .	116
6.8.3	Adaptive method . . . . .	117
<b>A</b>	<b>Software Description for NSTEAD</b>	<b>129</b>
A.1	Introduction . . . . .	129
A.2	Glossary of Variable Names . . . . .	129
A.2.1	Main variables . . . . .	129
A.2.2	Main arrays . . . . .	131
A.2.3	Main subroutines . . . . .	131
A.3	Program Overview . . . . .	132
A.4	Input Instructions . . . . .	136
A.5	Element Stiffness Calculations . . . . .	143
A.6	Documented Examples . . . . .	147
A.6.1	Example 1: Flow in a plane channel . . . . .	147
A.6.2	Example 2: Flow over a step . . . . .	165
<b>B</b>	<b>Software Description for NFLOWG</b>	<b>179</b>
B.1	Introduction . . . . .	179
B.2	Glossary of Variable Names . . . . .	179
B.2.1	Main logical variables for the code . . . . .	179
B.2.2	Main variables for the geometry and mesh data	181
B.2.3	Main arrays used in the Code . . . . .	183
B.2.4	Main subroutines . . . . .	183
B.3	Main Routine of <b>NFLOWG</b> . . . . .	184
B.4	Input Instructions . . . . .	186
B.4.1	Input instruction for file <b>PARA.DAT</b> . . . . .	187
B.4.2	Input instruction for file <b>GEOM.DAT</b> . . . . .	189
B.5	Documented Example . . . . .	200
	<b>Subject Index</b>	<b>215</b>
