Preface	xv
Acknowledgment	xix
List of Figures	xxi
List of Tables	xxv
<b>Part 1 Process Exchangers</b>	<b>1</b>
<b>Chapter 1 Personnel and Requirements</b>	<b>3</b>
1.1 The Selection of Exchangers .....	3
1.2 Personnel Involved in Identifying Requirements.....	4
1.3 Requirements by Application.....	14
1.4 Problems Due to a Missing Requirement.....	16
1.5 Requirements That Define What Is and What Is Not Wanted .....	21
1.6 Requirements for Fluid Properties .....	21
1.7 Summary of Problem Areas .....	22
1.8 Cleaning and Fouling.....	23
1.9 Contract Requirements between Seller and Buyer.....	23
<b>Chapter 2 Considerations before Finalizing the Selection</b>	<b>25</b>
2.1 Considerations Before Finalizing the Selection.....	26
2.2 Effect of Tube Length and Mechanical Cleaning upon Cost .....	26
2.3 Parallel Flow.....	28
2.4 Tube-Side Considerations in Selecting an Exchanger .....	29
<b>Chapter 3 Considerations in Selecting Shell-and-Tube Exchangers</b>	<b>45</b>
3.1 General .....	45
3.2 Tube Sizes and Patterns.....	45
3.3 Shell-Side Designation and Nomenclature .....	47
3.4 Shell Types.....	50
3.5 Front-End Types.....	54
3.6 Summary of Shell-and-Tube Designs and Their Limitations.....	58
<b>Chapter 4 Air Coolers</b>	<b>59</b>
4.1 Beginning the Process of Selecting an Air Cooler.....	63
4.2 Some Governing Conditions .....	63
4.3 Structural Considerations .....	66

4.4	Forced- versus Induced-Draft Air Coolers .....	69
4.5	Process Heat Transfer Coil or Section .....	71
4.6	Plate-Fin and Spiral-Fin Extended-Surface Exchangers .....	77
4.7	Duct Coolers .....	79
4.8	Selecting Several Air Coolers to Dissipate Heat.....	79
4.9	Calculating Surface and Airflow Area for Fin Coils.....	81
<b>Chapter 5 Extended-Surface Metallurgy</b>		<b>87</b>
5.1	Selecting Aluminum or Copper Fins .....	87
5.2	Fins of Materials Other Than Copper or Aluminum .....	89
5.3	Lowfin Tubes .....	92
5.4	Some Rules of Thumb for Finned Surfaces .....	92
<b>Chapter 6 Air Cooler Fans or Blowers</b>		<b>95</b>
6.1	Fan Coverage and Bundle Geometry .....	95
6.2	Fans and Blowers.....	98
6.3	Fan Drives .....	99
<b>Chapter 7 Exchangers with Longitudinal-Fin Tubes</b>		<b>103</b>
7.1	Double-Pipe Exchangers .....	103
7.2	Tank Heaters .....	105
7.3	Line Heaters .....	106
7.4	Overall Heat Transfer Rate Using Longitudinal-Fin Tubes .....	107
<b>Chapter 8 Plate Exchangers</b>		<b>109</b>
8.1	Construction Features .....	109
8.2	Plate Exchangers versus Shell-and-Tube and Double-Pipe Exchangers .....	109
8.3	Advantages and Disadvantages of Plate Exchangers .....	114
8.4	Planning Ahead .....	115
8.5	Cost Observation.....	116
8.6	A Seasonal Application .....	116
<b>Chapter 9 Comparing Exchanger Types</b>		<b>119</b>
9.1	Air Cooler Header Limits .....	119
9.2	Limitations in the Selection of Finned Surface .....	120
<b>Chapter 10 Fouling Factor Considerations</b>		<b>123</b>
10.1	Plant Conditions .....	123
10.2	Fouling Effect on Various Exchanger Designs.....	125
10.3	Dealing with the Consequences .....	130

10.4	Ways of Minimizing the Effect of Fouling .....	130
10.5	Accounting for Fouling When Selecting an Exchanger.....	131
<b>Chapter 11</b>	<b>Manifolds and Headers</b>	<b>133</b>
11.1	Selecting Manifolds .....	133
11.2	Air Cooler Headers and Their Limitations.....	135
11.3	Header Nozzle Locations and Quarter Points.....	136
11.4	Lube Oil Cooler Header Design .....	137
11.5	Four Liquid Coolers in Parallel.....	138
<b>Chapter 12</b>	<b>Freezing</b>	<b>141</b>
12.1	Antifreeze .....	141
12.2	Draining.....	142
12.3	Heating Air or Water.....	142
12.4	Air Recirculation in Duct Systems.....	142
12.5	Electric Heaters.....	143
12.6	Hot Water and Steam Coils .....	144
12.7	Other Causes of Freezing, and Other Precautions.....	144
<b>Chapter 13</b>	<b>The Iterative Process of Exchanger Selection</b>	<b>145</b>
13.1	Shell-and-Tube Units .....	147
13.2	Air Coolers.....	149
13.3	Double-Pipe Exchangers .....	152
13.4	Plate Exchangers.....	155
<b>Chapter 14</b>	<b>Techniques to Reduce the Size of an Exchanger</b>	<b>157</b>
14.1	Cooling with Hydrogen Gas .....	157
14.2	Lowfins .....	158
14.3	Internally and Externally Finned Tubes .....	159
14.4	Turbulators .....	161
14.5	Automatic Brush Cleaners.....	164
14.6	Small-Diameter Tubes .....	166
14.7	Advantages of Plate Exchangers over Shell-and-Tube Units .....	166
14.8	Designs That Use Fewer Finned Tubes per Layer and More Layers .....	166
<b>Chapter 15</b>	<b>Techniques to Reduce Exchanger or System Cost</b>	<b>169</b>
15.1	Quantity of Refrigerant in System .....	169
15.2	Case Study: Quench Oil Cooler .....	170
15.3	Air-Cooled Furfural Cooler Selection .....	172

15.4	Code and Noncode Units.....	173
15.5	Tubing.....	175
15.6	Shop Assembly.....	176
15.7	Rapid Delivery.....	177
15.8	Energy.....	178
15.9	Material and Construction Considerations.....	178
<b>Chapter 16 Adding Surface While Minimizing Downtime</b>		<b>183</b>
16.1	Add More Plates in Plate Exchangers.....	183
16.2	Change Fin Material.....	183
16.3	Add a Precooler in the Makeup Air Line.....	184
16.4	Add Double-Pipe Units to a Bank of Exchangers.....	185
16.5	Replace Bundles with Smaller-Diameter or Lowfin Tubes.....	185
16.6	Air Coolers.....	186
16.7	Insulation.....	186
<b>Chapter 17 Features That Should Make Selections Unacceptable</b>		<b>187</b>
17.1	Face Velocity (Coil) and Air Velocity (Duct).....	187
17.2	Water Velocity Limits.....	188
17.3	Noise.....	189
17.4	Stacking Units.....	190
17.5	Conserving Energy.....	191
17.6	Dimensional Limits.....	193
17.7	Liquid Flow across Fins.....	193
<b>Chapter 18 The Significance of Metal Temperature</b>		<b>195</b>
18.1	Significance of Tube-Wall Temperature in Sizing an Exchanger....	195
18.2	Condenser Driving Force.....	198
18.3	Heating with Desuperheated Steam.....	198
18.4	Bulk Viscosity and Tube-Wall Viscosity.....	199
18.5	Changing Metallurgy.....	199
18.6	Subcooling.....	199
18.7	Product Temperature Too High.....	199
18.8	Reboilers.....	201
18.9	Thermal Expansion in U-Tube Exchangers.....	201
18.10	Radiant Energy Affecting a Roof or Canopy.....	201
18.11	Tank Shell.....	202
18.12	Cables and Circuit Breakers.....	202

<b>Chapter 19</b>	<b>Thermally Correct Systems That Do Not Perform</b>	<b>203</b>
19.1	Identifying the Problem.....	203
19.2	Obstruction or Lack of Obstruction to Flow.....	205
19.3	Undersized Screen Room Ductwork.....	205
19.4	Airflows in A/C and ECS Systems.....	210
19.5	Header Size of Lube Oil Air Cooler.....	211
19.6	Quench Oil Cooler Inlet Design.....	211
19.7	Plate-and-Frame Exchanger.....	212
19.8	Cumulative Pressure Drop.....	212
19.9	Chiller Plant.....	212
19.10	Refinery.....	213
19.11	Starving Fans.....	214
19.12	Flow Restrictions.....	215
19.13	Avoiding Bypassing: A Checklist for Inspectors.....	215
19.14	Baffles.....	218
19.15	Other Causes of Underperformance.....	220
19.16	Summary: Causes and Cost of Failures.....	223
<b>Chapter 20</b>	<b>Recirculation</b>	<b>225</b>
20.1	Air Coolers.....	225
20.2	Starving Fans.....	225
20.3	Building-Air Recirculation.....	226
20.4	Duct Design.....	227
20.5	Water Recirculation.....	227
20.6	Controlled Recirculation.....	229
20.7	Recirculation Hints.....	229
<b>Chapter 21</b>	<b>Shipping and Handling</b>	<b>231</b>
21.1	Shock Load.....	231
21.2	Access to Site.....	231
21.3	Installation Location.....	231
21.4	Manufacturing Location.....	232
21.5	Width Considerations.....	232
21.6	Weight Considerations.....	233
21.7	Travel Restrictions.....	233
21.8	Field Assembly.....	234
21.9	Mounting Pads or Footings.....	234
21.10	A Radiation Condition.....	234

<b>Chapter 22</b>	<b>Relative Humidity</b>	<b>235</b>
22.1	Parked Trailer Operating Condition .....	237
22.2	Auditorium .....	237
<b>Part 2</b>	<b>Air-Conditioning Exchangers</b>	<b>241</b>
<b>Chapter 23</b>	<b>Characteristics, Components, and Performance of A/C System Exchangers</b>	<b>243</b>
23.1	Addressing Problems of A/C Systems and Performance .....	244
23.2	A/C System Component Exchangers: Evaporators and Condensers .....	247
23.3	Air-Conditioning System Evaporators .....	248
23.4	A/C System Condensers .....	252
<b>Chapter 24</b>	<b>Underperformance in A/C Systems Due to Ducting Problems</b>	<b>253</b>
24.1	Sound-Deadening or Insulation Material Added .....	254
24.2	Ducts Not Built in Accordance with Calculations .....	254
24.3	Breaks in Duct Continuity .....	254
24.4	Duct Turning Vane Faults .....	255
24.5	Airflow Reduced by Air Filters .....	255
24.6	Blocking or Altering a Supply or Return .....	256
24.7	Louvered Door Replaced .....	256
24.8	Takeoffs Added Reducing Airflow to Other Rooms .....	257
24.9	Makeup Air Quantity Increased .....	257
<b>Chapter 25</b>	<b>Other Conditions That Cause A/C Systems to Underperform</b>	<b>259</b>
25.1	Operating Conditions That Reduce the Capacity of Evaporators ....	259
25.2	Condenser Subjected to Solar Radiation .....	260
25.3	ECS Systems Operated at Other Than Design Conditions .....	261
25.4	Replacing Coils Solely on the Basis of Similar Dimensions .....	262
<b>Chapter 26</b>	<b>Ways of Increasing the Cooling Capacity of a System</b>	<b>263</b>
26.1	Add a Precooler in the Makeup Air Line .....	263
26.2	Insulate the Building .....	264
26.3	Add a Water-Cooled Unit in the Area to Be Cooled .....	264
26.4	Install a Sun Shield above the Condenser .....	264
26.5	Spray an Air-Cooled Condenser with Water .....	264
26.6	Provide Colder Water to Air-Handling Units .....	265

<b>Chapter 27</b>	<b>Conditions That Can Make an A/C System Unacceptable</b>	<b>267</b>
27.1	Uncleanable A/C Drains.....	267
27.2	Noise.....	267
27.3	Recirculation.....	267
27.4	Screen Room Cooling Condensation.....	267
27.5	System Shutdown Due to Solar Radiation.....	268
27.6	Exceeding the Air Velocity Limit.....	268
<b>Part 3</b>	<b>The Cooling of Electronics</b>	<b>269</b>
<b>Chapter 28</b>	<b>Electronic Installations and Their Heat Problems</b>	<b>271</b>
28.1	Nature of the Problem.....	271
28.2	Cooling Needs of Electronic Installations.....	273
28.3	Placing Cooling in Perspective.....	278
28.4	Troubleshooting Airflow Problems in Electronic Installations.....	278
28.5	Improving Cooling in Existing Racks.....	279
28.6	The Electronics Heat Exchanger System.....	281
28.7	Addressing Causes of Failure.....	282
28.8	Environmental Control System Concerns.....	282
<b>Chapter 29</b>	<b>Lessons for Electronic Engineers</b>	<b>285</b>
29.1	Overheating in Racks.....	285
29.2	Overheating Due to Screen Room Conditions.....	286
29.3	The Solution to a Common Problem.....	287
29.4	Screen Room As Duct Conditions That Have Caused Component Overheating (Table 29-1).....	287
29.5	Racks As Ducts Conditions That Have Caused Component Overheating (Table 29-2).....	287
29.6	Suggestions For Correcting Existing Electronics Overheating Problems (Table 29-3).....	292
29.7	Suggested Changes in Screen Room and Racks to Avoid Electronics Overheating (Table 29-4).....	292
29.8	Causes of Electronics Overheating Failures Other Than Duct Conditions (Table 29-5).....	294
29.9	Fan and Blower Considerations.....	297
<b>Chapter 30</b>	<b>Overheating Electronics and Corrective Steps to Take</b>	<b>299</b>
30.1	A Screen Room Recommendation.....	299
30.2	An Overview of Sizing Ducts and Racks.....	301

30.3	Tight Packaging .....	302
30.4	The Choice of Rack Width .....	303
30.5	Spacing Between Racks .....	304
30.6	The Screen Room Duct Connection.....	304
30.7	The Size of Screen Room Inlet and Outlet Ducts .....	305
30.8	The Flow Areas of Racks and Exchangers Compared .....	305
30.9	The Sizing of Racks as Ducts .....	306
30.10	Overview of Electronics Cooling Issues.....	308
30.11	Mobile Equipment .....	308
30.12	Maintenance.....	309
30.13	Summary .....	310
30.14	Other Factors .....	311

**Chapter 31 The Cause of Most Field Problems 313**

31.1	Flow Area Conditions That Have Caused Trouble .....	313
31.2	Flow Area Conditions That Affect Performance .....	314
31.3	Providing More Flow Area Than Wanted Causes Problems Similar to These .....	314
31.4	Design Conditions.....	314

**Index 317**
