Preface .....	vii
---------------	-----

## Part I Background

<b>1</b>	<b>Linear Algebra .....</b>	<b>3</b>
1.1	Vectors .....	3
1.2	Matrices and Matrix Operations .....	5
1.3	Matrices and Mappings .....	6
1.4	Inverse and Generalized Inverse Matrices .....	8
1.5	Direct Methods for Solving Linear Equations .....	9
1.6	Schur Complement .....	12
1.7	Norms .....	14
1.8	Scalar Products .....	15
1.9	Orthogonalization .....	18
1.10	Eigenvalues and Eigenvectors .....	19
1.11	Matrix Decompositions .....	21
1.12	Angles of Subspaces .....	24
1.13	Augmented Matrices .....	26
<b>2</b>	<b>Optimization .....</b>	<b>33</b>
2.1	Optimization Problems and Solutions .....	33
2.2	Unconstrained Quadratic Programming .....	34
2.2.1	Quadratic Cost Functions .....	34
2.2.2	Unconstrained Minimization of Quadratic Functions .....	35
2.3	Convexity .....	37
2.3.1	Convex Quadratic Functions .....	38
2.3.2	Minimizers of Convex Function .....	40

2.3.3	Existence of Minimizers . . . . .	41
2.3.4	Projections to Convex Sets . . . . .	42
2.4	Equality Constrained QP Problems . . . . .	44
2.4.1	Optimality Conditions . . . . .	45
2.4.2	Existence and Uniqueness . . . . .	47
2.4.3	KKT Systems . . . . .	48
2.4.4	Min-Max, Dual, and Saddle Point Problems . . . . .	50
2.4.5	Sensitivity . . . . .	52
2.4.6	Error Analysis . . . . .	54
2.5	Inequality Constrained QP Problems . . . . .	55
2.5.1	Polyhedral Sets . . . . .	56
2.5.2	Farkas's Lemma . . . . .	56
2.5.3	Necessary Conditions . . . . .	57
2.5.4	Existence and Uniqueness . . . . .	59
2.5.5	Optimality Conditions for Convex QP Problems . . . . .	60
2.5.6	Optimality Conditions for Bound Constrained Problems . . . . .	61
2.5.7	Min-Max, Dual, and Saddle Point Problems . . . . .	62
2.6	Equality and Inequality Constrained QP Problems . . . . .	64
2.6.1	Existence and Uniqueness . . . . .	64
2.6.2	KKT Conditions . . . . .	65
2.6.3	Bound and Equality Constrained Problems . . . . .	66
2.6.4	Duality for SPD Hessian and Dependent Constraints . . . . .	67
2.7	Duality for SPS Hessian and Dependent Constraints . . . . .	71
2.7.1	Constrained Dual Problem . . . . .	71
2.7.2	Uniqueness of a KKT Pair . . . . .	74
2.8	Separable Quadratic Inequality Constraints . . . . .	77
2.8.1	Feasible Cone and Optimality Conditions . . . . .	78
2.8.2	Separable Inequality and Equality QCQP Problems . . . . .	79
2.8.3	Constraint Qualification . . . . .	80
2.8.4	Existence and Uniqueness . . . . .	80
2.8.5	KKT Conditions for QCQP . . . . .	81

## Part II Basic Algorithms

<b>3</b>	<b>Gradient Methods . . . . .</b>	<b>85</b>
3.1	Reducing Euclidean Error . . . . .	86
3.2	Reducing the Cost Function . . . . .	88
3.3	Barzilai-Borwein Gradient Method . . . . .	90
3.4	Exploiting Momentum . . . . .	92
3.5	Analysis of Heavy Ball Method . . . . .	93
3.6	Comments . . . . .	98

<b>4</b>	<b>Conjugate Gradients as Direct Method</b> .....	99
4.1	Conjugate Directions and Minimization .....	100
4.2	Generating Conjugate Directions and Krylov Spaces .....	102
4.3	Conjugate Gradient Method .....	104
4.4	Comments .....	106
<b>5</b>	<b>Gradient Projection</b> .....	107
5.1	Separable Convex Constraints and Projections .....	107
5.2	Reducing Euclidean Error .....	110
5.3	Quadratic Function with Identity Hessian .....	112
5.4	Decrease Along the Projected-Gradient Path .....	113
5.5	Dominating Function .....	115
5.6	The Schöberl Lemma .....	116
5.7	Subsymmetric Sets .....	117
5.8	Reducing Energy Error .....	120
5.9	Comments .....	121
<b>6</b>	<b>From Penalty to Exact Augmented Lagrangians</b> .....	123
6.1	Review of Alternative Methods .....	124
6.2	Penalty Method .....	126
6.2.1	Minimizing Augmented Lagrangian .....	127
6.2.2	An Optimal Feasibility Error Estimate for Homogeneous Constraints .....	128
6.2.3	Approximation Error and Convergence .....	130
6.2.4	Improved Feasibility Error Estimate .....	131
6.3	Exact Augmented Lagrangian Method .....	132
6.3.1	Algorithm .....	133
6.3.2	Convergence of Lagrange Multipliers .....	135
6.3.3	Effect of the Steplength .....	136
6.3.4	Convergence of the Feasibility Error .....	140
6.3.5	Convergence of Primal Variables .....	141
6.3.6	Implementation .....	141
6.4	Comments and References .....	142
<b>7</b>	<b>Active Sets with Finite Termination</b> .....	143
7.1	KKT Conditions and Related Inequalities .....	144
7.2	The Working Set Method with Exact Solutions .....	145
7.2.1	Auxiliary Problems .....	146
7.2.2	Algorithm .....	147
7.2.3	Finite Termination .....	149
7.3	Polyak's Algorithm .....	150
7.3.1	Basic Algorithm .....	150
7.3.2	Finite Termination .....	151
7.3.3	Characteristics of Polyak's Algorithm .....	152

7.4	Inexact Polyak's Algorithm . . . . .	152
7.4.1	Looking Ahead and Estimate . . . . .	152
7.4.2	Looking Ahead Polyak's Algorithm . . . . .	155
7.4.3	Properties of Modified Polyak's Algorithms . . . . .	156
7.5	Comments and References . . . . .	157

### Part III Optimal Algorithms

<b>8</b>	<b>Conjugate Gradients as Iterative Method . . . . .</b>	<b>161</b>
8.1	Rate of Convergence and Optimality . . . . .	162
8.1.1	Min-max Estimate . . . . .	162
8.1.2	Estimate in the Condition Number . . . . .	164
8.1.3	Optimality . . . . .	166
8.2	Preconditioned Conjugate Gradients . . . . .	166
8.3	Preconditioning by Conjugate Projector (Deflation) . . . . .	169
8.3.1	Conjugate Projectors . . . . .	169
8.3.2	Minimization in Subspace . . . . .	170
8.3.3	Conjugate Gradients in Conjugate Complement . . . . .	171
8.3.4	Preconditioning Effect . . . . .	173
8.4	Conjugate Gradients for the Least Square Problems . . . . .	175
8.4.1	Equivalent Formulation and Krylov Spaces . . . . .	176
8.4.2	Algorithm cgSLS . . . . .	178
8.4.3	Convergence and Error Bounds . . . . .	180
8.5	Convergence in the Presence of Rounding Errors . . . . .	182
8.6	Numerical Experiments . . . . .	183
8.6.1	Discretized Energy Cost Benchmark . . . . .	183
8.6.2	Basic CG and Preconditioning . . . . .	184
8.6.3	Numerical Demonstration of Optimality . . . . .	185
8.6.4	Performance of cgSLS . . . . .	186
8.7	Comments and References . . . . .	187
<b>9</b>	<b>SMALE for Equality Constraints . . . . .</b>	<b>189</b>
9.1	Asymptotically Exact Augmented Lagrangian Method . . . . .	190
9.1.1	Algorithm . . . . .	190
9.1.2	Auxiliary Estimates . . . . .	191
9.1.3	Convergence Analysis . . . . .	193
9.2	Semimonotonic Augmented Lagrangians (SMALE) . . . . .	194
9.2.1	SMALE Algorithm . . . . .	195
9.2.2	Relations for Augmented Lagrangians . . . . .	196
9.2.3	Convergence and Monotonicity . . . . .	199
9.2.4	Optimality of the Outer Loop . . . . .	202
9.2.5	Optimality of SMALE with Conjugate Gradients . . . . .	204
9.3	Preconditioning Preserving Gap in the Spectrum . . . . .	207

9.4	Implementation of Inexact Augmented Lagrangians . . . . .	208
9.4.1	Stopping, Modification of Constraints, and Preconditioning . . . . .	209
9.4.2	Initialization of Constants . . . . .	209
9.4.3	Solution of More General Problems . . . . .	210
9.5	Numerical Experiments . . . . .	211
9.5.1	Uzawa, Exact Augmented Lagrangians, and SMALE . . . . .	211
9.5.2	Numerical Demonstration of Optimality . . . . .	212
9.6	Comments and References . . . . .	213
<b>10</b>	<b>MPRGP for Bound Constraints . . . . .</b>	<b>215</b>
10.1	Quantitative Refinement of KKT Conditions . . . . .	216
10.2	MPRGP Schema . . . . .	218
10.3	Rate of Convergence . . . . .	220
10.3.1	Convergence in Energy Norm . . . . .	220
10.3.2	Rate of Convergence of Gradients . . . . .	223
10.3.3	Optimality . . . . .	226
10.4	Finite Termination . . . . .	227
10.5	Implementation of MPRGP and Optional Modifications . . .	230
10.5.1	Expansion Step with Feasible Half-Step . . . . .	230
10.5.2	MPRGP Algorithm . . . . .	231
10.5.3	Choice of Parameters . . . . .	232
10.5.4	Proportioning with Newton Step (PRGPN) . . . . .	233
10.6	Preconditioning . . . . .	235
10.6.1	Preconditioning in Face . . . . .	235
10.6.2	Preconditioning by Conjugate Projector . . . . .	237
10.7	MPRGP for Problems with SPS Hessian . . . . .	241
10.8	Numerical Experiments . . . . .	243
10.8.1	Polyak, MPRGP, and Preconditioned MPRGP . . . . .	243
10.8.2	Numerical Demonstration of Optimality . . . . .	244
10.8.3	Numerical Experiments with SPS Hessian . . . . .	245
10.9	Comments and References . . . . .	247
<b>11</b>	<b>MPGP and PBBF for Separable QCQP . . . . .</b>	<b>249</b>
11.1	Projected Gradient and KKT Conditions . . . . .	250
11.2	Alternative Error Measures . . . . .	253
11.2.1	Reduced Gradient . . . . .	254
11.3	MPGP Scheme . . . . .	256
11.4	Rate of Convergence . . . . .	257
11.5	Bound on the Norm of Gradients . . . . .	259
11.6	Implementation . . . . .	261
11.6.1	Projection Step with Feasible Half-Step . . . . .	261
11.6.2	MPGP Algorithm in More Detail . . . . .	263

11.7	Spectral Projected Gradients with Fallback . . . . .	263
11.7.1	Algorithm PBBF . . . . .	263
11.7.2	Rate of Convergence . . . . .	265
11.8	Numerical Experiments . . . . .	266
11.9	Comments . . . . .	269
<b>12</b>	<b>Solvers for Separable and Equality QP/QCQP Problems .</b>	<b>271</b>
12.1	KKT Conditions . . . . .	272
12.2	Penalty and Exact Method of Multipliers . . . . .	273
12.3	SMALSE-M/SMALBE-M Algorithm . . . . .	274
12.4	Convergence and Optimality of SMALSE . . . . .	276
12.4.1	Inequalities Involving the Augmented Lagrangian . . . . .	276
12.4.2	Monotonicity and Feasibility . . . . .	278
12.4.3	Boundedness . . . . .	280
12.4.4	Convergence . . . . .	281
12.4.5	Optimality of the Outer Loop . . . . .	283
12.4.6	Optimality of the Inner Loop . . . . .	285
12.5	SMALSE-Mw for Strong Curvature . . . . .	287
12.5.1	Reduced Projected Gradient (Quadratic Constraints) . . . . .	287
12.5.2	SMALSE-Mw Algorithm . . . . .	291
12.6	R-Linear Convergence of SMALBE-M . . . . .	291
12.7	Adaptive Constraint Re-orthogonalization . . . . .	293
12.7.1	Algorithm . . . . .	293
12.7.2	Convergence of Adaptive SMALBE-M . . . . .	296
12.8	Implementation . . . . .	297
12.9	Numerical Experiments . . . . .	299
12.9.1	Balanced Reduction of Feasibility and Gradient Errors . . . . .	299
12.9.2	Adaptive Augmentation—3D Hertz Problem . . . . .	300
12.9.3	Numerical Demonstration of Optimality . . . . .	302
12.10	Comments . . . . .	303

## Part IV Case Studies

<b>13</b>	<b>Elliptic Variational Inequalities . . . . .</b>	<b>307</b>
13.1	Model Problem . . . . .	308
13.2	Domain Decomposition and Discretization . . . . .	309
13.3	TFETI Quadratic Programming Problem . . . . .	310
13.4	Hybrid TFETI Problem and Optimality . . . . .	312
13.5	Numerical Experiments . . . . .	314
13.5.1	Billions Equality Constrained QP Benchmark . . . . .	314
13.5.2	Model Variational Inequality . . . . .	315

13.5.3	Elastic Cube on Rigid Obstacle . . . . .	316
13.5.4	Roller Bearings of Wind Generator . . . . .	317
13.6	Comments . . . . .	318
<b>14</b>	<b>Contact Problem with Friction . . . . .</b>	<b>319</b>
14.1	Coulomb Friction . . . . .	320
14.2	Variational Formulation . . . . .	321
14.3	Tresca Friction and Dualization . . . . .	322
14.4	Domain Decomposition and Discretization . . . . .	323
14.5	Dual Formulation . . . . .	324
14.6	Preconditioning by Projectors to Rigid Body Modes . . . . .	326
14.7	Numerical Experiments . . . . .	329
14.7.1	Cantilever Beams with Isotropic Friction . . . . .	329
14.7.2	Yielding Clamp Connection . . . . .	331
<b>15</b>	<b>Model Predictive Control . . . . .</b>	<b>333</b>
15.1	Linear Model Predictive Control (MPC) . . . . .	334
15.2	Regulator Problem . . . . .	335
15.3	Oscillating Masses Regulator Problem . . . . .	336
<b>16</b>	<b>Support Vector Machines . . . . .</b>	<b>339</b>
16.1	Primal SVM Quadratic Programming Problems . . . . .	340
16.2	Dual SVM Quadratic Programming Problems . . . . .	342
16.3	Numerical Experiments . . . . .	344
16.3.1	Mushroom and Phishing Classification Problem . . . . .	344
16.3.2	ExCAPE Data Set . . . . .	345
<b>17</b>	<b>PERMON and ESPRESO Software . . . . .</b>	<b>349</b>
17.1	PERMON . . . . .	349
17.2	ESPRESO . . . . .	350
	<b>Acronyms and Notations . . . . .</b>	<b>351</b>
	<b>References . . . . .</b>	<b>355</b>
	<b>Index . . . . .</b>	<b>373</b>
