

CONTENTS

INTRODUCTION 11

Miloš Matěj

THE HISTORICAL CONTEXT 15

Irena Korbelářová

The South Plant of the Vítkovice Ironworks – the prehistory of the New Metalworks (up to the spring of 1945) 15

The Kunčice Plant on the route to becoming an independent metallurgical complex (from nationalization to 1951) 17

The Klement Gottwald New Metalworks (Nová huť Klementa Gottwalda / NHKG, 1952–1989/90) 23

The New Metalworks and its successors around the turn of the new millennium (up to 2024) 36

HISTORICAL DEVELOPMENT OF INDIVIDUAL PRODUCTION UNITS 41

Ludvík Tejzr – Jan Počta

The coking plant 41

The coking plant design and the start of construction 41

The beginnings of production 41

Modernization and ecological improvements 44

The most recent innovations and automation projects 48

The current situation, shutdown of production 48

The raw material base and ore agglomeration 50

The north ore storage facility and agglomeration plant 50

Raw material unloading, ore storage and homogenization 50

The agglomeration plant 50

The south ore storage facility and agglomeration plant 54

Raw material unloading, ore storage and homogenization 54

The agglomeration plant 54

The south-north belt transport connection 55

Blast furnaces 56

The plans for the blast furnace plant and the design of the blast furnaces 56

The establishment of the blast furnace plant 56

Blast furnace VP 1 56

The furnace's profile and structural design 57

The furnace charge and the charging process 60

The blower and blast stove systems 60

Working at the hearth and on the furnace platform 60

Removal and processing of slag 62

Blast furnace gas cleaning 63

The first operating results	63
The overhaul of blast furnace VP 1 in 1957	63
The 1961 overhaul of blast furnace VP 1, reconstruction with a thick-walled stack	65
Blast furnace VP 2	65
The furnace's profile and structural design	65
Operating results	66
The 1960 overhaul	66
The launch of operations with raised pressures at the furnace top	66
Blast furnaces VP 3 and VP 4, operational from 1958–1960 (during the second phase of the construction of the blast furnace plant)	68
Blast furnace VP 3	68
The furnace's profile and structural design	68
The blower and blast stove systems	69
Blast furnace VP 4	69
The partial replacement of coke by oil injection via the tuyeres	69
The overhauls of the blast furnaces in 1967–1971, increasing the usable volume of furnaces VP 2, 3 and 4 to 1,260 m ³	71
The overhaul of blast furnace VP 1 in 1967	71
The overhaul of blast furnace VP 3 in 1968	72
The overhaul of blast furnace VP 4 in 1969	72
The overhaul of blast furnace VP 2 in 1971	72
The medium-grade repair of blast furnace VP 1 in 1975	73
The medium-grade repair of blast furnace VP 2 in 1976, the installation of the first Czechoslovak-designed bell-less furnace top	73
The development of the bell-less furnace top (BLT)	74
The medium-grade repair of blast furnace VP 3 in 1977	75
The discovery of an erratic boulder near the blast furnaces	75
The blast furnaces during the overhauls of 1980–1985	75
The 1980 overhaul of blast furnace VP 1	75
The 1981 overhaul of blast furnace VP 3	77
The overhaul of blast furnace VP 4 in 1982 and of blast furnace VP 2 in 1984	77
The establishment of the joint venture Ostrava Blast Furnaces (Vysoké pece Ostrava, a. s.)	78
The blast furnaces during the overhauls in the 1990s and at the beginning of the 21st century, the increase of the usable volume of furnaces VP 2 and VP 3 to 1,598 m ³	78
The overhauls of blast furnace VP 1 (1995) and blast furnace VP 2 (1993, 2008)	78
The overhauls of blast furnace VP 3 in 1993 and 2008	79
The overhaul of blast furnace VP 4 in 1994 and the medium-grade repair in 2005	79
The last innovations at blast furnaces VP 2 and VP 3, permanent decommissioning	80
The steelworks and the continuous casting plant	80
The fixed Siemens-Martin furnaces (the first phase of construction)	81
The tilting Siemens-Martins furnaces (the second phase of construction)	82

The Maerz-Boelens furnaces (the third phase of construction)	82
The tandem furnaces (the fourth phase of construction)	84
The conversion of the Siemens-Martin and Maerz-Boelens furnaces into tandem furnaces	87
The beginnings of secondary metallurgy when casting steel into coquilles	88
The continuous casting plant	88
Continuous casting station ZPO 1	90
The modernization of continuous casting station ZPO 1 in 2013	93
Continuous casting station ZPO 2, mini strip mill	93
Continuous casting station ZPO 3	94
The rolling plant (production of sections, strips and wires)	94
Rolling mills producing re-roll stock	95
Bloom rolling mills I and II	95
The continuous billet casting mill	96
Finishing mills	96
The heavy/medium-section cross country mill (HSCC)	99
Strip mill P 250	99
Strip mill P 800	99
The continuous wire mill	101
The medium/fine-section rolling mill (SJV)	103
The Steckel 1500 hot wide strip mill (TŠP 1500)	103
The tube rolling mill and tube welding plant	106
The unfinished tube rolling mill built in 1943–1945	106
The completion of the tube rolling mill after 1945	106
The Large Stiefel mill (Stiefel 4–10")	109
The Small Stiefel mill (Stiefel 140)	111
Production of helical welded tubes	111
Tube insulation	112
Changes in the names and organizational structure of the tube rolling mill	112
The forge with a 118 MN press (12,000 t)	115
The machine works and foundry	118
Production of machinery and equipment for deep boring and oil extraction	118
Production of railway wheelsets	119
Production of automotive wheels	121
Introduction of new types of production	122
Mine supports	122
Road barriers	122
The foundry	124
The small flake graphite grey iron foundry	124
The cast steel foundry	125
The large grey iron foundry	125

The modernization of the foundries in the 1990s 126

Energy 126

The early beginnings and the launch of production 126

The original configuration of the power plant (buildings I, II, III and IV) 127

The coal management facility, storage bins and crushers (building I) 127

The boiler hall (building II) 128

Reducing atmospheric emissions of harmful substances 129

Water management (building III) 129

The water supply to the metallurgical facilities 130

The electrical engine hall (building IV, first hall) 130

Electricity production and supply to the metallurgical complex 132

Heat production and distribution 132

Production of compressed air 132

The engine hall, turbo blowers, electric and steam-powered compressors
(building IV, second hall) 132

Electric compressors 134

Steam-powered compressors 134

PRODUCTION TECHNOLOGIES AND THE TECHNOLOGICAL FLOW 137

Miloš Matěj – Ludvík Tejzr – Jan Počta

The technological flow 137

The coking plant 137

Coke oven batteries 137

Coke oven chambers 139

Heat recovery, regenerators 139

Charging the coke oven chambers, operations with compacted coal and loose coal 139

The chemical production facility at the coking plant, processing of coke oven gas 141

Removal of tar 141

Removal of ammonia 142

Removal of sulphur (desulphurization) 142

Removal of BTX 142

Ecological improvements 142

Iron ore agglomeration 143

Pig iron production 143

Blast furnaces 145

The Czechoslovak-designed blast furnace 149

Soviet-design blast furnaces with modifications by Vítkovice and self-supporting stacks 149

Blast heating and blowers 149

Cleaning blast furnace gas 154

The basic range of pig iron produced in a blast furnace 155

Cupola furnaces	155
Steel production and secondary metallurgy	155
Refining processes, refining, the steel production process	155
Acidic and basic processes	158
Open-hearth furnaces, the Martin process	158
Fixed and tilting Siemens-Martin furnaces (designation SM)	158
Tandem furnaces (designation TA)	158
Maerz-Boelens furnaces (designation MB)	161
Secondary metallurgy	164
Ladle furnaces (designation PP)	164
The vacuum degassing station (designation VD)	164
The continuous casting station (designation ZPO)	164
Forming	169
Rolling	169
Longitudinal rolling	170
Diagonal rolling, tube rolling	170
Stiefel automated rolling mills	170
Wire production	171
Forging	172
Hydraulic press 118 MN (12,000 t)	172

REGISTERS 183

Ludvík Tejzr – Jan Počta

Register of coke oven batteries	183
Register of blast furnaces	184
Register of steel furnaces	188
Register of rolling mills	191
Register of tube rolling mills	194
Register of tube welding facilities	195

GENERAL AXONOMETRY OF THE NEW METALWORKS 196–197

LITERATURE AND SOURCES 199
