Introduction	xix

Section A Innovative techniques in conservation and remote sensing

1. Biome functioning and bioindicators

Marina Regina Frizzas, Pedro Henrique Brum Togni, Ludmilla Moura de Souza Aguiar, Cássia Beatriz Rodrigues Munhoz, Ricardo Bomfim Machado, and Charles Martins de Oliveira

1. Introduction	3
2. The importance of using bioindicators for biome conservation	4
2.1 Brazilian biomes and its threats	4
2.2 The use of bioindicators in the Brazilian biomes	5
3. Vertebrates as bioindicators—Bats as an example	6
4. Invertebrates as bioindicators	9
4.1 Air quality assessment	9
4.2 Assessment of the water environment	9
4.3 Assessment of the terrestrial environment	10
4.4 Dung beetles as indicators—A case study	10
5. Invasive plants and woody encroachment	11
6. Regional indicators for biodiversity monitoring	13
6.1 Remote sensing for monitoring invasive species	14
7. Conclusions and prospects	14
Acknowledgments	14
References	14

2. Integration of Ecological Informatics, Remote Sensing, and Machine Learning: A Systematic Literature Review

Emília Alves Nogueira, Christian Dias Cabacinha, and Fabrizio Soares

1. Introduction	21
2. Methods	22
3. Results	24
3.1 Article analysis	24
3.2 Synthesis of the data	24
4. Discussion	29
5. Threats to validity	31
6. Final considerations	31
Acknowledgments	32
References	32

3. Research progress of eDNA technology in biodiversity monitoring

Nengwen Xiao, Xiaoxuan Sun, Mei Shen, and Ningning Guo

1. Advantages and disadvantages of eDNA technology	35
2. eDNA technology process and method	36
2.1 Sample collection and processing	36
2.2 DNA extraction	38
2.3 PCR amplification	38
2.4 Sequencing and data analysis	39
3. Progress of research based on eDNA investigation	39
3.1 Species diversity survey	39
3.2 Invasive species detection	40
3.3 Detection of rare and endangered species	40
3.4 Species abundance and biomass assessment	41

3.5 Reconstruction of ancient ecosystems	42	3. Innovative techniques in terrestrial insect diversity monitoring	72
4. Conclusions and prospects	42	3.1 Trap monitoring in terrestrial insect diversity	72
4.1 Lack of standardized process norms for sampling programs	42	3.2 Camera monitoring in terrestrial insect diversity	76
4.2 Primer bias	42	3.3 Sensor monitoring in terrestrial insect diversity	78
4.3 Inadequate database	42	3.4 Intelligent monitoring in terrestrial insect diversity	80
References	43	4. Innovative techniques in terrestrial vertebrate diversity monitoring	83
4. Importance Indice		4.1 Camera monitoring in terrestrial vertebrate diversity	83
<i>Germano Leão Demolin-Leite</i>		4.2 Sensor monitoring in terrestrial vertebrate diversity	85
1. Introduction	47	4.3 Intelligent monitoring in terrestrial vertebrate diversity	85
2. Percentage of Importance Indice (%I.I.)	48	4.4 Drone monitoring in terrestrial vertebrate diversity	86
3. Experimental areas	48	5. Innovative techniques in aquatic animal diversity monitoring	87
4. Classification of phytophagous arthropods by the %I.I.	50	5.1 Camera monitoring in aquatic animal diversity	87
5. Classification of natural enemies by the %I.I.	51	5.2 Sensor monitoring in aquatic animal diversity	88
6. Conclusions	53	5.3 Intelligent monitoring in aquatic animal diversity	89
Acknowledgments	54	5.4 Drone monitoring in aquatic animal diversity	89
References	54	6. Conclusion	90
5. Importance Indice-Production Unknown		References	91
<i>Germano Leão Demolin-Leite</i>		7. Forestry conservation through machine learning innovations	
1. Introduction	57	<i>Fernando Coelho Eugenio,</i>	
2. Percentage of Importance Indice-Production Unknown (%I.I.-P.U.)	58	<i>Sally Deborah Pereira da Silva,</i>	
3. Experimental area	59	<i>Roberta Aparecida Fantinel,</i>	
4. Classification of phytophagous arthropods by %I.I.-P.U.	59	<i>Ivana Pires de Sousa-Baracho,</i>	
5. Classification of natural enemies by %I.I.-P.U.	61	<i>and Fabiano Ramos Costa</i>	
6. Conclusions	64	1. Introduction	95
Acknowledgments	64	1.1 Traditional learning	96
References	64	1.2 Ensemble learning	96
6. Long-term biome biomonitoring		1.3 Neural networking and deep learning	97
<i>Qiang Ding, Yijie Tong, Lulu Li,</i>		1.4 Reinforcement learning	97
<i>Zhengyu Zhao, Zhehao Tian, Ning Liu,</i>		2. Algorithms	97
<i>and Ming Bai</i>		2.1 Linear analysis	98
1. Introduction	69	2.2 Random forest method	99
2. Brief description of techniques currently used in diversity monitoring	70	2.3 Support-vector machine techniques	100
2.1 Techniques: Trap monitoring	70	2.4 K-nearest neighbors	100
2.2 Techniques: Camera monitoring	70	2.5 Deep learning	101
2.3 Techniques: Sensor monitoring	70	2.6 Other algorithms	102
2.4 Techniques: Intelligent monitoring	71		
2.5 Techniques: Drone monitoring	71		

3. Conclusions or perspectives	103
Acknowledgments	103
References	103

7. Conclusions and perspectives	133
Acknowledgments	134
References	134

8. Remote sensing

Eric Bastos Gorgens and Maria Luiza de Azevedo

1. Introduction	105
2. Remote sensing	105
3. Storing information	105
4. Remote sensing characteristics	106
5. Active and passive sensors	108
6. Scanning system	108
7. Coordinate system	109
8. Platforms	110
9. Targets	111
10. Sensor types	112
11. Remote sensing products	114
12. Final consideration	117

10. Glaciers

Marcelo Henrique Soller Ramada, Stephan Machado Dohms, and Ana Laura Pereira Lourenço

1. Introduction	139
2. Geographic location	141
3. Biodiversity	142
4. Human activities and their impacts	144
5. Glacier protection laws, protection policies, and other measures to conserve glaciers	145
6. Operational and potential monitoring tools to conserve or to recover the biome	147
7. Conclusions or perspectives	148
Acknowledgments	149
References	149

Section B

Global warming perspectives for 50 years

9. Insular biomes

Germano Leão Demolin-Leite

1. Introduction	121
2. Biodiversity	124
2.1 Canary Islands	124
2.2 Marajó Island	124
3. Human activities and their impacts	125
4. Impact of global warming	127
4.1 Island morphology and biodiversity	127
4.2 Food and water security of the populations residing on the islands	128
4.3 Invasive alien species, diseases, and epidemics	129
4.4 Island tourism	130
5. Operational, monitoring, and statistical tools	130
5.1 Remote sensing	130
5.2 The normalized difference vegetation index	130
5.3 Time-calibrated phylogenies of DNA-bounded species	131
5.4 Field surveys and interviews	131
5.5 Modeling	131
6. Conservation strategies	132

11. Deserts

Haroun Chenchouni and Souad Neffar

1. Introduction	155
2. Geographic location	156
3. Biodiversity	156
4. Features of conservation areas	157
5. Ecological indicators of conservation areas	157
5.1 Species diversity and populations of key species	158
5.2 Quality of the water environment	159
5.3 Assessment of plant cover	159
5.4 Climate change	159
5.5 Community engagement	159
6. Human activities and their impacts	160
7. Operational and potential monitoring tools for desert conservation and recovery	160
7.1 Expansion of protected areas	160
7.2 Mitigating resource overexploitation	160
7.3 Ecosystem restoration	160
7.4 Environmental monitoring	161
7.5 Environmental education and engagement of local communities	161
7.6 Promoting scientific research	161
7.7 Sustainable development programs and international cooperation	161
8. Conclusion	161
9. Future outlook and perspectives	161

Conflicts of interests	162		
Availability of data and materials	162		
Funding	162		
References	162		
12. Mediterranean and shrublands			
<i>Filippo Bussotti and Martina Pollastrini</i>			
1. Introduction	167		
2. Disturbances in ME	168		
2.1 Forest fires	168		
2.2 UV radiation	169		
2.3 Air pollution and atmospheric depositions	169		
2.4 Impacts of extreme heat and drought events	169		
2.5 Biotic interactions	172		
3. Ecophysiological mechanisms of impact and recovery of Mediterranean vegetation	173		
3.1 Physiological impacts of drought stress in Mediterranean trees and shrubs	173		
3.2 Impacts and recovery in Mediterranean vegetation	174		
4. Dynamics and evolution of ME under climate change	174		
4.1 Loss of biodiversity	174		
4.2 Substitution of species	174		
4.3 Vegetation shifts	175		
4.4 Evolution or regression of Mediterranean shrubland	175		
5. Issues for management and monitoring	175		
6. Conclusions	175		
References	176		
13. Steppes and prairies			
<i>Sara Gamboa and Manuel Hernández Fernández</i>			
1. Introduction	181		
2. Geographic location	182		
2.1 North American prairies and shrublands	182		
2.2 Eurasian steppes	182		
2.3 Patagonian steppe	183		
2.4 High-altitude steppes	183		
3. Past, present, and future of climate trends	183		
4. Impacts of global warming in steppes and prairies	184		
4.1 Flora: Adapting to new realities	184		
4.2 Fauna: A dance of adaptation and migration	186		
4.3 Recurring wildfires: Burning down the house	187		
4.4 Soil carbon sequestration: Decarbonization and productivity at risk	188		
4.5 Land degradation: An eroding future	189		
4.6 Water scarcity and drying water sources: The rain that does not reach	190		
4.7 Highland steppes: Ecosystems vanishing in the air	190		
5. Green horizons: Mitigation of climate challenges in steppes and prairies	191		
6. Conclusion: Toward a sustainable future for the steppe and prairie biome	192		
Acknowledgments	193		
References	193		
14. Effects of climate change on the distribution of dung beetle species in South American pasturelands			
<i>Maria Eduarda Maldaner, Ricardo José da Silva, Gabriel de Mello, Priscila Lemes, and Fernando Z. Vaz-de-Mello</i>			
1. Introduction	201		
2. Material and methods	202		
2.1 Geographical and functional data	202		
2.2 Climatic data and geographical barriers	202		
2.3 Climate niche modeling	202		
3. Results and discussion	203		
3.1 Climate niche modeling performance	203		
3.2 Future distribution of dung beetles: Many losses and few gains	203		
3.3 Future scenarios for key species regarding South American pasturelands	205		
3.4 Future scenarios on dung beetle functional types and reduction in functional diversity	205		
3.5 Highlights and prospects of this research	206		
Acknowledgments	206		
References	206		
15. Potential changes in vegetation across Northern Eurasia in warmed climates predicted from CMIP5 climate models by the end of the century			
<i>Nadezhda M. Tchebakova and Elena I. Parfenova</i>			
1. Introduction	209		
2. Data and methods	209		
2.1 Geography and climate	209		
2.2 Permafrost	211		

2.3 Vegetation in Northern Eurasia	212	3. Potential solutions	266
2.4 Russia's bioclimatic vegetation model, RuBCliM	213	3.1 Research needs	266
2.5 The RuBCliM validation	214	3.2 Reduction of emissions	266
3. Results	214	3.3 Carbon sequestration in caves and karst areas: A natural solution to climate change	267
3.1 Climate change across Northern Eurasia by the end of the century	214	3.4 Enhance resilience to climate change through protected areas' networks	267
3.2 RuBCliM verification	214	3.5 Engineering subterranean ecosystems	268
3.3 Potential change in biome distributions over Northern Eurasia by the end of the century	215	3.6 Translocations of cave fauna	269
4. Discussion	215	3.7 Ex situ breeding programs	271
5. Conclusions	218	Acknowledgments	273
Acknowledgments	218	References	273
References	218		
16. Temperate forests		19. Agriculture and agroecology	
<i>Germano Leão Demolin-Leite</i>		<i>Nuno Rodrigo Madeira, Mariane Carvalho Vidal, and Carlos Eduardo Pacheco Lima</i>	
1. Introduction	223	1. Introduction	277
2. Biodiversity	225	2. More resilient and sustainable food production systems	279
2.1 South America	225	3. Nontillage system (NTS)	280
2.2 North America	226	4. Integrated crop-livestock-forestry system (ICLFS), agroforestry system (AFS), and syntropic agriculture	282
2.3 Europe	227	5. Agroecological transition and agroecology	284
2.4 Asia	228	6. Neglected and underutilized species (NUS) and nonconventional edible plants (NCEP or, in Portuguese, PANC)	285
2.5 Oceania	229	7. Conclusions or perspectives	289
3. Human activities and their impacts	229	Acknowledgments	289
4. Impact of global warming	233	References	289
5. Conservation strategies and tools	235		
6. Conclusions and perspectives	237	20. Changing landscape of agriculture: Innovative approaches for food security and sustainability in Qatar	
Acknowledgments	239	<i>Kishwar Ali and Rachid Benlamri</i>	
References	239	1. Introduction	293
17. Tropical forests		2. The scope of this literature review	293
<i>Germano Leão Demolin-Leite</i>		3. Current status of agriculture in Qatar	294
1. Introduction	245	4. Soil conservation in Qatar	296
2. Biodiversity	246	5. Artificial intelligence (AI) in agriculture	296
3. Deforestation	249	6. Multiple sensor-driven smart irrigation and management system	296
4. Climate effects of deforestation	255	7. Drone- and UAV-assisted monitoring in agriculture	297
5. Impact of global warming on tropical forests and humanity	257	8. Computing power and data analytical tools	297
6. Conservation strategies	259		
7. Conclusions	259		
Acknowledgments	261		
References	261		
18. Moving forward: Mitigating the effect of climate change in subterranean ecosystems			
<i>Rodrigo L. Ferreira, Francis G. Howarth, and Stefano Mammola</i>			
1. Introduction	265		
2. Unintended consequences caused by mitigation programs	265		

9. Life cycle assessment (LCA) and circular bio-economy	297	3.2 Deforestation, urbanization, and habitat fragmentation	325
10. Conclusions and recommendations	297	3.3 Climate change and zoonoses emergency	326
References	298	3.4 Climate change and animal diseases	329
21. Traditional peoples and communities: <i>The Coming Blessing Land</i>		3.5 Impacts of climate changes on ecosystems, habitats, and wildlife behavior	329
<i>André Brasil, César Guimarães, and Pedro Aspahan</i>		3.6 Ecosystem resilience and importance to preserve biodiversity	331
1. Introduction	301	3.7 Climate change and antimicrobial resistance	331
2. History and transformation of space by <i>Terra Vista</i> settlement	303	4. Global coordination and governance help the implementation of one health	331
3. A visit to the <i>Terra Vista</i> settlement	306	4.1 Importance of COVID-19 to trigger one health approaches	331
3.1 Solange's portrait	308	4.2 One health high-level expert panel (OHHLEP)	331
4. The land's lesson <i>a terra em aula</i>	312	5. One health approach and healthy ecosystem	332
4.1 The Baptism of Seu Badu	314	5.1 Pandemic prevention and preparedness response	333
5. The coming blessing perspectives	317	6. Challenges and future directions	337
References	318	6.1 COP 28 report and actions	339
22. Zoonoses and pandemic potential		7. Conclusions	339
<i>Janice Reis Ciacchi Zanella</i>		Acknowledgments	340
1. Introduction	319	References	340
2. Zoonotic diseases and emerging pandemics	320	Conclusions and remarks	345
2.1 Viruses as the most frequent emergent zoonotic pathogen	321	Index	347
3. Drivers or factors for zoonose emergency and spillover	323		
3.1 Social, economic, and demographic changes in the human population	324
