List of Figures	xiii
List of Tables	xvii
Preface	xix
I Introduction to Pricing and Management of Financial Securities	1
1 Mathematics of Compounding	3
1.1 Interest and Return	3
1.1.1 Amount Function and Return	3
1.1.2 Simple Interest	6
1.1.3 Periodic Compound Interest	7
1.1.4 Continuous Compound Interest	10
1.1.5 Equivalent Rates	11
1.1.6 Continuously Varying Interest Rates	14
1.2 Time Value of Money and Cash Flows	16
1.2.1 Equations of Value	16
1.2.2 Deterministic Cash Flows and Their Net Present Values	18
1.3 Annuities	21
1.3.1 Simple Annuities	21
1.3.2 Determining the Term of an Annuity	26
1.3.3 General Annuities	27
1.3.4 Perpetuities	28
1.3.5 Continuous Annuities	29
1.4 Bonds	31
1.4.1 Introduction and Terminology	31
1.4.2 Zero-Coupon Bonds	31
1.4.3 Coupon Bonds	33
1.4.4 Serial Bonds, Strip Bonds, and Callable Bonds	34
1.5 Yield Rates	36
1.5.1 Internal Rate of Return and Evaluation Criteria	36
1.5.2 Determining Yield Rates for Bonds	38
1.5.3 Approximation Methods	40
1.5.4 The Yield Curve	47
1.6 Yield Risk and Duration	51
1.6.1 Immunization	55
1.7 Exercises	57

2	Primer on Pricing Risky Securities	65
2.1	Stocks and Stock Price Models	65
2.1.1	Underlying Assets and Derivative Securities	65
2.1.2	Basic Assumptions for Asset Price Models	66
2.2	Basic Price Models	67
2.2.1	A Single-Period Binomial Model	67
2.2.2	A Discrete-Time Model with a Finite Number of States	74
2.2.3	Introducing the Binomial Tree Model	77
2.2.4	Recursive Construction of a Binomial Tree	82
2.2.5	Self-Financing Investment Strategies in the Binomial Model	83
2.2.6	Log-Normal Pricing Model	86
2.3	Arbitrage and Risk-Neutral Pricing	91
2.3.1	The Law of One Price	92
2.3.2	A First Look at Arbitrage in the Single-Period Binomial Model	93
2.3.3	Arbitrage in the Binomial Tree Model	95
2.3.4	Risk-Neutral Probabilities	96
2.3.5	Martingale Property	98
2.3.6	Risk-Neutral Log-Normal Model	99
2.4	Value at Risk	100
2.5	Dividend Paying Stock	103
2.6	Exercises	106
3	Portfolio Management	113
3.1	Expected Utility Functions	113
3.1.1	Utility Functions	113
3.1.2	Mean-Variance Criterion	121
3.2	Portfolio Optimization for Two Assets	122
3.2.1	Portfolio of Two Risky Assets	122
3.2.2	Portfolio Lines	126
3.2.3	The Minimum Variance Portfolio	129
3.2.4	Selection of Optimal Portfolios	131
3.3	Portfolio Optimization for N Assets	137
3.3.1	Portfolios of Several Assets	137
3.3.2	The Minimum Variance Portfolio	140
3.3.3	Minimum Variance Portfolio Line	141
3.3.4	Case without Short Selling	144
3.3.5	Maximum Expected Utility Portfolio	145
3.3.6	Efficient Frontier and Capital Market Line	147
3.4	The Capital Asset Pricing Model	152
3.5	Exercises	154
4	Primer on Derivative Securities	163
4.1	Forward Contracts	163
4.1.1	No-Arbitrage Evaluation of Forward Contracts	165
4.1.2	Value of a Forward Contract	170
4.2	Basic Options Theory	171
4.2.1	Payoffs of Standard Options	172
4.2.2	Put-Call Parities	175
4.2.3	Properties of European Options	176
4.2.4	Early Exercise and American Options	178
4.2.5	Nonstandard European-Style Options	180

4.3	Fundamentals of Option Pricing	183
4.3.1	Pricing of European-Style Derivatives in the Binomial Tree Model	183
4.3.2	Pricing of American Options in the Binomial Tree Model	191
4.3.3	Option Pricing in the Log-Normal Model: The Black-Scholes-Merton Formula	192
4.3.4	Greeks and Hedging of Options	196
4.3.5	Black-Scholes Equation	202
4.4	Exercises	206
II	Discrete-Time Modelling	217
5	Single-Period Arrow-Debreu Models	219
5.1	Specification of the Model	219
5.1.1	Finite-State Economy. Vector Space of Payoffs. Securities	219
5.1.2	Initial Price Vector and Payoff Matrix	222
5.1.3	Portfolios of Base Securities	223
5.2	Analysis of the Arrow-Debreu Model	224
5.2.1	Redundant Assets and Attainable Securities	224
5.2.2	Completeness of the Model	227
5.3	No-Arbitrage Asset Pricing	229
5.3.1	The Law of One Price	229
5.3.2	Arbitrage	231
5.3.3	The First Fundamental Theorem of Asset Pricing	232
5.3.4	Risk-Neutral Probabilities	236
5.3.5	The Second Fundamental Theorem of Asset Pricing	239
5.3.6	Investment Portfolio Optimization	240
5.4	Pricing in an Incomplete Market	243
5.4.1	A Trinomial Model of an Incomplete Market	243
5.4.2	Pricing Unattainable Payoffs: The Bid-Ask Spread	246
5.5	Change of Numéraire	252
5.5.1	The Concept of a Numéraire Asset	252
5.5.2	Change of Numéraire in a Binomial Model	253
5.5.3	Change of Numéraire in a General Single Period Model	254
5.6	Exercises	261
6	Introduction to Discrete-Time Stochastic Calculus	271
6.1	A Multi-Period Binomial Probability Model	271
6.1.1	The Binomial Probability Space	271
6.1.2	Random Processes	277
6.2	Information Flow	280
6.2.1	Partitions and Their Refinements	280
6.2.2	Sigma-Algebras	284
6.2.3	Filtration	290
6.2.4	Filtered Probability Space	292
6.3	Conditional Expectation and Martingales	293
6.3.1	Measurability of Random Variables and Processes	293
6.3.2	Conditional Expectations	295
6.3.3	Properties of Conditional Expectations	301
6.3.4	Conditioning in the Binomial Model	305
6.3.5	Binomial Model with Interdependent Market Moves	308
6.3.6	Sub-, Super-, and True Martingales	312

6.3.7	Classification of Stochastic Processes	315
6.3.8	Stopping Times	317
6.4	Exercises	324
7	Replication and Pricing in the Binomial Tree Model	331
7.1	The Standard Binomial Tree Model	331
7.2	Self-Financing Strategies and Their Value Processes	334
7.2.1	Equivalent Martingale Measures for the Binomial Model	338
7.3	Dynamic Replication in the Binomial Tree Model	341
7.3.1	Dynamic Replication of Payoffs	341
7.3.2	Replication and Valuation of Random Cash Flows	350
7.4	Pricing and Hedging Non-Path-Dependent Derivatives	351
7.5	Pricing Formulae for Standard European Options	356
7.6	Pricing and Hedging Path-Dependent Derivatives	361
7.6.1	Average Asset Prices and Asian Options: Recursive Evaluation	361
7.6.2	Extreme Asset Prices and Lookback Options	365
7.6.3	Recursive Evaluation of Lookback Options	366
7.7	American Options	371
7.7.1	Writer's Perspective: Pricing and Hedging	371
7.7.2	Buyer's Perspective: Optimal Exercise	378
7.7.3	Early-Exercise Boundary for Non-Path-Dependent Options	386
7.7.4	Pricing American Options: The Case with Dividends	387
7.8	Exercises	391
8	General Multi-Asset Multi-Period Model	397
8.1	Main Elements of the Model	397
8.2	Assets, Portfolios, and Strategies	400
8.2.1	Payoffs and Assets	400
8.2.2	Static and Dynamic Portfolios	403
8.2.3	Self-Financing Strategies	403
8.2.4	Replication of Payoffs	405
8.3	Fundamental Theorems of Asset Pricing	406
8.3.1	Arbitrage Strategies	406
8.3.2	Enhancing the Law of One Price	407
8.3.3	Equivalent Martingale Measures	408
8.3.4	Calculation of Martingale Measures	410
8.3.5	The First and Second FTAP	413
8.3.6	Pricing and Hedging Derivatives	415
8.3.7	Pricing under the Markov Property	416
8.3.8	Radon–Nikodym Derivative Process and Change of Numéraire	422
8.4	More Examples of Discrete-Time Models	433
8.4.1	Binomial Tree Model with Stochastic Volatility	433
8.4.2	Binomial Tree Model for Interest Rates	436
8.4.3	Interest Rates with the Markov Property	443
8.4.4	Forward Measures for Interest-Rate Derivative Pricing	448
8.5	Exercises	458

A	Elementary Probability Theory	463
A.1	Probability Space	463
A.1.1	A Sample Space and Events	463
A.1.2	Probability	467
A.1.3	Probability Space	470
A.1.4	Counting Techniques and Combinatorial Probabilities	471
A.1.5	Conditional Probability	475
A.1.6	Law of Total Probability and Bayes' Formula	477
A.1.7	Independence of Events	479
A.2	Univariate Probability Distributions	481
A.2.1	Random Variables	481
A.2.2	Cumulative Distribution Function	483
A.2.3	Discrete Probability Distributions	484
A.2.4	Continuous Probability Distributions	487
A.3	Mathematical Expectations and Other Moments	491
A.3.1	Mathematical Expectation of a Discrete Random Variable	491
A.3.2	Variance and Other Moments	494
A.3.3	Mean, Variance, and Median of a Continuous Random Variable	496
A.3.4	Moment Generating Functions	498
A.4	Discrete and Continuous Probability Distributions	500
A.4.1	Bernoulli Trials	500
A.4.2	Bernoulli Distribution	501
A.4.3	Binomial Distribution	502
A.4.4	Hypergeometric Distribution	504
A.4.5	Geometric Distribution	505
A.4.6	Negative Binomial Distribution	506
A.4.7	Poisson Distribution	507
A.4.8	Continuous Uniform Distribution	508
A.4.9	Exponential Distribution	508
A.4.10	Normal Distribution	510
A.4.11	Gamma Distribution	514
A.4.12	Transformation of Continuous Random Variables	515
A.5	A Joint Probability Distribution	516
A.5.1	Bivariate Continuous Probability Distributions	519
A.5.2	Independence of Random Variables	520
A.6	Limit Theorems	523
A.6.1	Chebyshev's Theorem	523
A.6.2	Sum of Random Variables	524
A.6.3	Sample Mean and Limit Theorems	525
A.6.4	The Law of Large Numbers	526
B	Answers and Hints to Exercises	529
B.1	Chapter 1	529
B.2	Chapter 2	531
B.3	Chapter 3	533
B.4	Chapter 4	534
B.5	Chapter 5	537
B.6	Chapter 6	542
B.7	Chapter 7	546
B.8	Chapter 8	550

C Glossary of Symbols and Abbreviations 553

D Greek Alphabet 557

Answers and Hints to Exercises 565

Chapter 1 565

Chapter 2 565

Chapter 3 565

Chapter 4 565

Chapter 5 565

Chapter 6 565

Chapter 7 565

Chapter 8 565

A.1.1 Probability Space and Events 565

A.1.2 Probability 565

A.1.3 Conditional Probability 565

A.1.4 Counting Techniques and Combinatorial Probability 565

A.1.5 Law of Total Probability and Bayes' Formula 565

A.1.6 Independence of Events 565

A.1.7 Univariate Probability Distributions 565

A.2.1 Random Variables 565

A.2.2 Replication and Valuation 565

A.2.3 Quantitative Distribution Functions 565

A.2.4 Discrete Probability Distributions 565

A.2.5 Continuous Probability Distributions 565

A.3.1 Mathematical Expectation and Other Moments 565

A.3.2 Variance and Other Moments 565

A.3.3 Mean, Variance, and Median of a Continuous Random Variable 565

A.3.4 Moment Generating Functions 565

A.4.1 Discrete and Continuous Probability Distributions 565

A.4.2 Binomial Distribution 565

A.4.3 Binomial Distribution 565

A.4.4 Hypergeometric Distribution 565

A.4.5 Geometric Distribution 565

A.4.6 Negative Binomial Distribution 565

A.4.7 Poisson Distribution 565

A.4.8 Continuous Uniform Distribution 565

A.4.9 Exponential Distribution 565

A.4.10 Normal Distribution 565

A.4.11 Gamma Distribution 565

A.4.12 Transformation of Continuous Random Variables 565

A.5.1 Joint Probability Distribution 565

A.5.2 Bivariate Continuous Probability Distributions 565

A.5.3 Independence of Random Variables 565

A.5.4 Limit Theorems 565

A.5.5 Chebyshev's Theorem 565

A.5.6 Sum of Random Variables 565

A.5.7 Sample Mean and Limit Theorems 565

A.5.8 The Law of Large Numbers 565

A.6.1 Binomial Tree Model with Stochastic Interest Rates 565

A.6.2 Binomial Tree Model with Stochastic Interest Rates 565

A.6.3 Binomial Tree Model with Stochastic Interest Rates 565

A.6.4 Binomial Tree Model with Stochastic Interest Rates 565

A.6.5 Binomial Tree Model with Stochastic Interest Rates 565

A.6.6 Binomial Tree Model with Stochastic Interest Rates 565

A.6.7 Binomial Tree Model with Stochastic Interest Rates 565

A.6.8 Binomial Tree Model with Stochastic Interest Rates 565

A.6.9 Binomial Tree Model with Stochastic Interest Rates 565

A.6.10 Binomial Tree Model with Stochastic Interest Rates 565

A.6.11 Binomial Tree Model with Stochastic Interest Rates 565

A.6.12 Binomial Tree Model with Stochastic Interest Rates 565
