Chapter 1

Evolution of DNA Sequences

Wen-Hsiung Li, Chi-Cheng Luo, and Chung-I Wu

1. Introduction	1
2. Methods for Estimating the Number of Nucleotide Substitutions between Sequences	4
2.1. Methods	4
2.2. Comparison of Methods	12
3. Rates of Nucleotide Substitution in Various Regions of Genes	16
3.1. Coding Regions	16
3.2. Noncoding Regions	23
3.3. Pseudogenes	25
4. Molecular Clock	28
4.1. The Controversy	28
4.2. A Reevaluation	32
4.3. Rates of Nucleotide Substitution following Gene Duplication	41
5. Patterns of Nucleotide Substitution in Pseudogenes and Functional Genes	43
6. Nonrandom Usage of Synonymous Codons	51
6.1. Patterns of Codon Usage	51
6.2. Factors Affecting Usage of Synonymous Codons	52
7. Concerted Evolution of Multigene Families	65
7.1. Mechanisms of Concerted Evolution	65
7.2. Factors Affecting the Rate of Concerted Evolution	70
7.3. Evolutionary Implications	74
8. Mechanisms of DNA Evolution	77

9. Concluding Remarks	82
References	84

Chapter 2

The Mitochondrial Genome of Animals

Wesley M. Brown

1. Introduction	95
2. Structure, Content, and Function in Animal Mitochondrial DNA	97
2.1. Gene Content	97
2.2. Genome Structure	99
2.3. Gene Order	99
2.4. Genome Size	101
2.5. Control Region	101
2.6. Replication	102
2.7. Transcription	103
2.8. Strand Distribution of Genes and Nucleotides	104
2.9. Genetic Code and Codon Usage	106
3. Sequence Variation in Animal Mitochondrial DNA	106
3.1. Protein Genes	108
3.2. Transfer RNA Genes	109
3.3. Ribosomal RNA Genes	110
3.4. Other Regions	110
4. Rates of Change in Animal Mitochondrial DNA	117
4.1. Rates of Nucleotide Substitution	117
4.2. Additions and Deletions	121
4.3. Rates of Genome Rearrangements	121
5. Speculations, Problems, and Prospects	122
References	124

Chapter 3

Evolution of Chloroplast and Mitochondrial DNA in Plants and Algae

Jeffrey D. Palmer

1. Introduction	131
2. Chloroplast Genome Evolution	132
2.1. Chloroplast DNA Inheritance	133

2.2. Cytological Organization of Chloroplast DNA	134
2.3. Physicochemical Properties of Chloroplast DNA	135
2.4. Molecular Organization and Rearrangement of Chloroplast DNA	139
3. Chloroplast Gene Evolution	170
3.1. Evolution of Individual Chloroplast Genes	170
3.2. General Features of Chloroplast Gene Evolution	183
4. Mitochondrial DNA Evolution	190
4.1. Genome Size	191
4.2. Genome Organization and Intragenomic Recombination	193
4.3. Rearrangement in Evolution	195
4.4. Rearrangement in Cultured Cells and Somatic Crosses ..	196
4.5. Extrachromosomal Elements in Plant Mitochondria	199
4.6. Gene Content and Gene Transfer	201
4.7. Gene Evolution and Genetic Code	203
5. Phylogenetic Implications of Organelle DNA Variation	206
5.1. Endosymbiotic Origins of Chloroplasts and Mitochondria	206
5.2. Phylogenetic Relationships among Plants and Algae	209
6. Summary Comparison of Chloroplast and Mitochondrial DNA Evolution	211
References	216

Chapter 4

Localized Highly Repetitive DNA Sequences in Vertebrate and Invertebrate Genomes

George L. Gabor Miklos

1. Introduction	241
1.1. Historical Perspectives: <i>Audi alteram partem</i>	242
2. The Molecular and Biological Data Base: Vertebrates	247
2.1. Kangaroo Rats and the Concept of a Library	247
2.2. Amphibians and the Transcriptional Capacities of Tandem Arrays	249
2.3. The Calf and the Concept of DNA Reamplification	253
2.4. Primate Repeats and DNA Sequence Variation	257
2.5. The Mouse, DNA Polymorphisms, and Chromosome Pairing	268
2.6. Rats and Rearrangements	270

2.7. Sheep, Goats, Satellite Homologies, and Rearrangements	274
3. The Molecular and Biological Data Base: Invertebrates	275
3.1. <i>Drosophila</i> Species	275
3.2. Manipulation of Heterochromatic Regions	280
3.3. Satellite DNA and Development Timing	285
3.4. Evolutionary Considerations	289
3.5. Germ Line Effects	296
3.6. Crabs: From the Simple to the Complex	299
4. Data Summary	302
4.1. Kangaroo Rats	302
4.2. Amphibia	302
4.3. The Calf	303
4.4. Primates	303
4.5. The Mouse	303
4.6. Rats	303
4.7. Sheep and Goats	304
4.8. <i>Drosophila</i>	304
4.9. Grasshoppers	304
4.10. Crabs	305
5. Epilogue	305
5.1. Cellular, Structural, and Mechanistic Approaches	305
5.2. Evolutionary Concepts and Tandem Arrays: <i>Anguilla cauda tenes</i>	306
6. Conclusions	311
References	313

Chapter 5

The Evolution of Interspersed Repetitive DNA Sequences in Mammals and Other Vertebrates

Carl W. Schmid and Che-Kun James Shen

1. Introduction	323
2. Background	324
2.1. DNA Renaturation Studies	324
2.2. Summary of Renaturation Studies	326
3. RNA Pseudogenes	326
3.1. Pseudogenes Resulting from Processed mRNA	326
3.2. Small RNA Pseudogenes Are Recognizably Interspersed Repeats	327
4. The <i>Alu</i> Family and Its Allies	328

4.1. Structure of the Human <i>Alu</i> Family	328
4.2. Direct Repeats Flanking <i>Alu</i> Family Members	334
4.3. Nonhuman <i>Alu</i> -like Sequences	338
5. Non- <i>Alu</i> -Family Interspersed Repeats	343
5.1. <i>Kpn/Bam</i> H1 Repeats in Primate and Rodent	343
5.2. Other Families of Inserted Repeats	345
5.3. Interspersed Tandem Repeats	345
6. Biological Functions and Effects	347
6.1. Similarity of Inserted Repeats and Pseudogenes	347
6.2. Possible Functions of <i>Alu</i> -like Sequences	348
6.3. Effects Attributable to the Presence and Insertion of <i>Alu</i>	349
6.4. Functions and Effects of Interspersed Tandem Repeats	351
7. Summary	352
References	352

Chapter 6

The Contributions of Retroviruses to the Study of Mammalian Evolution

Raoul E. Benveniste

1. Introduction	359
2. Isolation of Primate Retroviruses	362
2.1. Introduction	362
2.2. Comparison of Primate Viral Isolates	363
3. Phylogeny of Primates as Indicated by DNA-DNA Hybridization	365
3.1. Generation Time Effect on the Average Rate of DNA Evolution	375
3.2. Thermal Stability Measurements of Mammalian Species Capable of Producing Viable Hybrids	377
4. Evolution of Primate Retrovirus Genes	378
4.1. Evolution of Baboon Type C Viral Genes	378
4.2. Effect of Geographic Habitat of a Species on the Rate of Baboon Virogene Evolution	380
4.3. Evolution of Languar Type D Viral Genes	385
4.4. Evolution of Colobus, Macaque, Squirrel Monkey, and Owl Monkey Virogenes	386
5. Endogenous Mammalian Retroviruses	388
6. Interspecies Transmission and Germ Line Integration of Mammalian Retroviruses	391

6.1. Transfer of Virus from Baboon Ancestor to Domestic Cat Ancestor	392
6.2. Use of Interspecies Retrovirus Transmission as a Marker for Species Divergence	397
6.3. Interspecies Transmission from Ancestors of Rodents to Cats	398
6.4. Interspecies Transmission from Rodent Ancestors to Ancestors of the Pig	399
6.5. Interspecies Transmission from New World Monkeys to New World Carnivores	401
6.6. Interspecies Transmission from Rodent Ancestors to Ancestors of Minks and Weasels	402
7. Interspecies Transmission of Infectious Retroviruses	402
7.1. Origin of Gibbon Leukemia Virus	403
7.2. Origin of Infectious Macaque Viruses	404
7.3. Mammalian Retroviruses of Unknown Origin	405
7.4. Interspecies Transmission of Nonmammalian Retroviruses	407
8. Conclusion	408
References	410

Chapter 7

Evolution of Ribosomal DNA

Susan A. Gerbi

1. Origin of Genes for the Translational Apparatus	419
1.1. An RNA Basis for the Primitive Translational Machinery	419
1.2. Was There a tRNA Ancestor to rRNA?	423
1.3. Ribosomal Proteins May Be a Later Addition to the Ribosome	424
1.4. Coordinate Regulation of Synthesis of RNA Components of the Ribosome	428
2. Basic Organization of rDNA	430
2.1. Organization of rDNA in Bacteria	430
2.2. Organization of rDNA in Mitochondria	432
2.3. Organization of rDNA in Chloroplasts	434
2.4. Organization of rDNA in Eukaryotic Nuclei	438
3. Evolutionary Conservation in rRNA Structure	441
3.1. Primary Structure of rRNA	442

3.2. Secondary Structure of rRNA	447
4. Processing of rRNA	462
4.1. rRNA Processing in Eubacteria	462
4.2. rRNA Processing in Eukaryotes	463
5. Nontranscribed Spacers	470
5.1. Length Variability and Sequence Repetition in the NTS	470
5.2. Functional Regions within the NTS	471
6. Evolutionary Forces Acting on rDNA	481
6.1. The Riddle of Concerted Evolution	481
6.2. Mechanisms of Molecular Drive	482
6.3. Selection Superimposed on Molecular Drive	485
References	487

Chapter 8

On the Evolution of Genome Organization in Mammals

Stephen J. O'Brien, Hector N. Seuanez, and James E. Womack

1. Introduction	519
2. Procedures for Studying Genome Evolution	522
3. The Human Gene Map: An Index Species	526
4. Comparative Genetics and Cytogenetics of Primates	527
4.1. The Great Apes	527
4.2. Comparative Mapping of Man and Other Primates	535
4.3. Primate Gene Families	540
5. Comparative Genetics and Cytogenetics of Rodents	547
5.1. Comparative Genetics within Rodentia	547
5.2. Comparative Genetics between Rodents and Primates	554
6. Comparative Genetics and Cytogenetics of Carnivores	558
6.1. The Cat Family, Felidae	558
6.2. Other Carnivores	565
7. Other Mammalian Families	567
8. Endogenous Retroviruses	569
9. Comparative Genetics of Mammalian Oncogenes	571
10. Conclusions	577
References	579
Index	591
