Introduction	6
2 Literature review.....	8
2.1 Biological influence of developmental change	8
2.1.1 Growth and development of body	8
2.1.2 Development of a locomotor system at preschool age	10
2.1.3 Development of a cardiorespiratory system at preschool age	11
2.1.4 Development of the nervous system up to school age	12
2.2 Motor development.....	14
2.2.1 Motor development and related terminology	16
2.2.2 Characteristics of motor development and motor learning in children age three to seven	18
2.2.3 Assessment and tests of motor proficiency in preschool age	21
2.3 Determinants of motor skill development and level of physical activity	23
2.3.1 Motor proficiency in relation to organized physical activities	26
2.3.2 Age and gender differences of motor proficiency	28
2.3.3 Motor proficiency in relation to intelligence.....	31
2.4 Motor skill deficit - Developmental Coordination Disorder	34
2.4.1 Diagnosis and treatment of developmental coordination disorder	37
2.4.2 Children with DCD in physical education and sport classes.....	38
3 Aim and Hypothesis	41
3.1 Hypothesis	41
4 Methods and materials.....	43
4.1 Participants	43
4.2 Instruments.....	43
4.2.1 Anthropometry	43
4.2.2 Movement Assessment Battery 2 nd edition (MABC- 2).....	44
4.2.3 Raven's progressive colour matrices (CPM).....	45
4.3 Procedure	46
4.4 Data collection and Statistical analysis.....	46
5 RESULTS.....	48
5.1 Analysis of differences in motor proficiency of preschool children aged 5 to 7.....	50

5.1.1	Descriptive statistics the level of motor proficiency of preschool children aged 5 to 7 related to MD, AC, BAL and TTS	50
5.1.2	The significant difference in motor competence in preschool children aged 5 to 7	52
5.1.3	Characteristics and homogeneity of preschool children age 5 to 7 related to MD, AC, BAL, and TTS.....	53
5.1.4	Measures of similarities or differences between preschool children aged 5 to 7 related to motor proficiency	54
5.2	Analysis of differences in motor proficiency of preschool children related to gender differences	56
5.2.1	Descriptive statistics the level of motor proficiency of preschool boys and girls related to MD, AC, BAL and TTS	56
5.2.2	The significant difference in motor competence in preschool according to gender	58
5.2.3	Characteristics and homogeneity of the boys and girls related to MD, AC, BAL, and TTS..	59
5.3	Analysis of differences in motor proficiency of preschool boys related to participation in organized physical activity.....	60
5.3.1	Descriptive statistics the level of motor proficiency of boys from the control group, football and sports school related to MD, AC, BAL and TTS	60
5.3.2	The significant difference in motor competence between preschool boys according to their participation in organised physical activity.....	62
5.3.3	Characteristics and homogeneity of the control, football and judo-sports school groups	63
5.3.4	Measures of similarities or differences between the control group, football, and judo- sports school related to motor proficiency	64
5.4	Analysis of differences in motor proficiency of preschool girls related to organised physical activity.....	67
5.4.1	Descriptive statistics the level of motor proficiency of girls from the control group, rhythmic gymnastics and sports school related to MD, AC, BAL, and TTS.....	67
5.4.2	The significant difference in motor competence between preschool girls age 5 to 7 according to their participation in organised physical activity.....	69
5.4.3	Characteristics and homogeneity of the control, rhythmic gymnastics, and sports school groups.....	70
5.4.4	Measures of similarities or differences between the control group, rhythmic gymnastics, and sports school related to motor proficiency.....	71
5.5	Analysis of differences in motor proficiency between preschool children at different cognitive level	74

5.5.1	Descriptive statistics the level of motor proficiency of preschool children at different IQ levels according to the Raven test	74
5.5.2	Significant differences in motor competence between preschool children at different cognitive levels	76
5.5.3	Characteristics and homogeneity of the groups at different cognitive levels related to manual dexterity, aiming and catching, balance, and total test score.....	77
5.5.4	Measures of similarities or differences between the groups at different cognitive levels related to motor proficiency	78
6	Discussion.....	82
6.1	Motor proficiency of preschool children related to age.....	83
6.2	Motor proficiency of preschool children related to gender	84
6.3	Motor proficiency of preschool boys according to participation in organised physical activity	86
6.4	Motor proficiency of preschool girls according to participation in organised physical activity	89
6.5	Motor proficiency of preschool children related to the cognitive level.....	92
7	Conclusions	97
8	Summary.....	98
