

# CONTENTS

	Preface	xiii
	List of Symbols	xv
<b>CHAPTER 1</b>	<b>INTRODUCTION</b>	<b>1</b>
	1.1 Soil Behavior in Civil and Environmental Engineering	1
	1.2 Scope and Organization	3
	1.3 Getting Started	3
<b>Part I</b>	<b>Soil Formation, Composition, Characterization</b>	<b>5</b>
<b>CHAPTER 2</b>	<b>SOIL FORMATION</b>	<b>7</b>
	2.1 Introduction	7
	2.2 The Earth's Crust	7
	2.3 Geologic Cycle and Geological Time	8
	2.4 Rock and Mineral Stability	9
	2.5 Weathering	10
	2.6 Origin of Clay Minerals and Clay Genesis	16
	2.7 Residual Soils	17
	2.8 Sediment Erosion, Transport, and Deposition	20
	2.9 Terrestrial Deposits	25
	2.10 Mixed Continental and Marine Deposits	27
	2.11 Marine Deposits	28
	2.12 Chemical and Biological Deposits	31
	2.13 Hard Soils and Soft Rocks	32
	2.14 Fills	33
	2.15 Tailings	33
	2.16 Post-Depositional Changes in Sediments	34
	2.17 Structure Development	39
	2.18 Soil Profiles and Taxonomy	44
	2.19 Concluding Comments	47
	Questions and Problems	47
<b>CHAPTER 3</b>	<b>SOIL MINEROLOGY</b>	<b>49</b>
	3.1 Importance of Soil Mineralogy in Geotechnical Engineering	49
	3.2 Atomic Structure	50
	3.3 Interatomic Bonding	51
	3.4 Secondary Bonds	51
	3.5 Crystals and their Properties	52
	3.6 Factors Controlling Crystal Structures	55
	3.7 Silicate Crystals	56

3.8	Surfaces	58
3.9	Nonclay Mineral Particles	59
3.10	Structural Units of Clay Minerals	60
3.11	Synthesis Pattern and Classification of the Clay Minerals	65
3.12	Intersheet and Interlayer Bonding in the Clay Minerals	66
3.13	The 1:1 Minerals	67
3.14	Smectite Minerals	70
3.15	Micalike Clay Minerals	73
3.16	Other Clay Minerals	74
3.17	Determination of Soil Composition	76
3.18	X-Ray Diffraction Analysis	79
3.19	Microscopy	82
3.20	Other Methods for Compositional Analysis	85
3.21	Quantitative Estimation of Soil Components	86
3.22	Concluding Comments	87
	Questions and Problems	87
<b>CHAPTER 4</b>	<b>SOIL–WATER–CHEMICAL INTERACTIONS</b>	<b>89</b>
4.1	Introduction	89
4.2	Nature of Ice and Water	90
4.3	Influence of Dissolved Ions on Water Structure	91
4.4	Mechanisms for Soil–Water Interaction	92
4.5	Observations and Evidence of Structure and Properties of Adsorbed Water	96
4.6	Clays as Colloidal Particles	100
4.7	Elements of Double-Layer Theory	100
4.8	Electrostatic Forces from the DLVO Theory	105
4.9	Influences of System Variables on the Double Layer	106
4.10	Long-Range Attraction: Van Der Waals Forces	107
4.11	Net Energy of Interaction: Combining Electrostatic and Van Der Waals Forces	108
4.12	Limitations of the DLVO Layer Model	110
4.13	Clay Particle Interactions Deduced from Molecular Simulations	114
4.14	Cation Exchange—General Considerations	116
4.15	Theories for Ion Exchange	117
4.16	Soil–Chemical Interactions	118
4.17	Concluding Comments	119
	Questions and Problems	120
<b>CHAPTER 5</b>	<b>FUNDAMENTAL ENGINEERING CHARACTERIZATION OF SOILS</b>	<b>123</b>
5.1	Introduction	123
5.2	Particle Size Distribution in Granular Soils	126
5.3	Morphological Characterization of Granular Soils	130
5.4	Texture of Granular Soils	135
5.5	Interparticle Friction	137
5.6	Sand Particle Stiffness	146
5.7	Sand Particle Strength	148
5.8	Packing Density of Granular Soils and the Limits	152
5.9	Particle Sizes of Clays and Influences of Exchangeable Cations and pH	155
5.10	Atterberg Limits and Activity of Clays	157
5.11	Dominating Influence of the Clay Phase	161
5.12	Mixed Soils	162
5.13	Effects of Organic Matter	165
5.14	Concluding Comments	165
	Questions and Problems	167

<b>CHAPTER 6</b>	<b>SOIL FABRIC AND ITS MEASUREMENT</b>	<b>169</b>
6.1	Introduction	169
6.2	Preparing Samples for Direct Observation of Fabric	171
6.3	Direct Observation of Soil Fabric	174
6.4	Image Processing and Analysis	185
6.5	Use of Particulate Mechanics and Numerical Modelling to Study Fabric	190
6.6	Qualitative Assessment of Fabric	191
6.7	Quantitative Assessment of Fabric	198
6.8	Void Fabric of Cohesionless Soils	207
6.9	Concluding Comments	208
	Questions and Problems	209
<b>Part II</b>	<b>Engineering Properties and Behavior</b>	<b>211</b>
<b>CHAPTER 7</b>	<b>EFFECTIVE, INTERGRANULAR, AND TOTAL STRESS</b>	<b>213</b>
7.1	Introduction	213
7.2	Principle of Effective Stress	213
7.3	Force Distributions in a Particulate System	214
7.4	Interparticle Forces in Silt, Sand, and Gravel-Sized Particles	216
7.5	Interparticle Forces in Clay-Sized Particles	225
7.6	Relating Interparticle Forces and Macroscale Stress	228
7.7	Total Potentials and Heads	231
7.8	Water Pressures	232
7.9	Assessment of Intergranular Stress	234
7.10	Assessment of Terzaghi's Effective Stress	236
7.11	Effective Stress in Unsaturated Soils	239
7.12	Concluding Comments	241
	Questions and Problems	241
<b>CHAPTER 8</b>	<b>CONDUCTION PHENOMENA</b>	<b>243</b>
8.1	Introduction	243
8.2	Flow Laws and Interrelationships	243
8.3	Hydraulic Conductivity	245
8.4	Flows Through Unsaturated Soils	260
8.5	Thermal Conductivity	266
8.6	Electrical Conductivity	269
8.7	Diffusion	274
8.8	Simultaneous Flows of Water, Current, and Salts Through Soil-Coupled Flows	276
8.9	Quantification of Coupled Flows	279
8.10	Electrokinetic Phenomena	284
8.11	Transport Coefficients and the Importance of Coupled Flows	285
8.12	Compatibility—Effects of Chemical Flows on Properties	289
8.13	Electroosmosis	291
8.14	Electroosmosis Efficiency	293
8.15	Consolidation by Electroosmosis	296
8.16	Electrochemical Effects	301
8.17	Electrokinetic Remediation	303
8.18	Self-Potentials	303
8.19	Concluding Comments	305
	Questions and Problems	305

<b>CHAPTER 9</b>	<b>VOLUME CHANGE BEHAVIOR</b>	<b>307</b>
9.1	Introduction	307
9.2	Factors Controlling Resistance to Volume Change	308
9.3	Fundamental Concepts in Volume Change Behavior of Fine-Grained Soils	310
9.4	Consolidation	318
9.5	Secondary Compression	322
9.6	Evolution of Fabric During Compression	324
9.7	Influence of Structure on Compression Behavior	325
9.8	The Stresses in One-Dimensional Consolidation	327
9.9	Volume Change Behavior Under Constant Stress Ratio Conditions	333
9.10	Swelling and Shrinkage of Fine-Grained Soils	334
9.11	Fundamental Concepts in Volume Change Behavior of Coarse-Grained Soils	336
9.12	Particle Deformations and Breakage During Volume Change	339
9.13	Collapsing Soils	343
9.14	Influences of Mineralogical Detail in Soil Expansion	345
9.15	Osmotic Pressure and Water Adsorption Influences on Compression and Swelling	348
9.16	Summary	353
9.17	Concluding Comments	354
	Questions and Problems	354
<b>CHAPTER 10</b>	<b>LOAD-DEFORMATION BEHAVIOR AND STRENGTH</b>	<b>357</b>
10.1	Introduction	357
10.2	General Characteristics of Strength and Deformation	358
10.3	Critical State: A Useful Reference Condition	369
10.4	State Variables to Express the Void Ratio and Confining Pressure Dependency	378
10.5	Effective Strength of Sands	380
10.6	Effective Strength of Clays	385
10.7	Undrained Strength of Clays	388
10.8	Undrained Strength of Sands	392
10.9	True Cohesion	397
10.10	Prefailure Deformation of Soil	399
10.11	Linear Elastic Stiffness	402
10.12	Transition from Elastic to Plastic States	410
10.13	Evolution of Fabric During Soil Deformation	419
10.14	Influence of Fabric and Structure on Deformation and Strength	425
10.15	Intermediate Stress Effects and Stress Anisotropy	436
10.16	Concluding Comments	441
	Questions and Problems	442
<b>CHAPTER 11</b>	<b>SOME SPECIAL FEATURES OF SOIL BEHAVIOR</b>	<b>445</b>
11.1	Introduction	445
11.2	Sensitivity and Its Causes	445
11.3	Property Interrelationships in Sensitive Clays	456
11.4	Behavior After Peak and Strain Localization	461
11.5	Residual State and Residual Strength	465

	11.6	Undrained Cyclic Loading and Liquefaction	469
	11.7	Response to Drained Cyclic Loading	480
	11.8	Engineering Behavior of Mixed Soils	482
	11.9	Elastic Wave Propagation	484
	11.10	Fracturing of Soils	487
	11.11	Dispersive Clays	491
	11.12	Internal Erosion	493
	11.13	Slaking	495
	11.14	Concluding Comments	495
		Questions and Problems	495
<b>CHAPTER 12</b>		<b>THERMAL EFFECTS ON SOIL BEHAVIOR</b>	<b>497</b>
	12.1	Introduction	497
	12.2	Variations of Thermal Properties of Soil With State and Environmental Conditions	499
	12.3	Heat Transfer in Individual Particles and at Particle Contacts	503
	12.4	Temperature Effect on Volumetric Behavior	505
	12.5	Theoretical Analysis of Drained Conditions	510
	12.6	Thermal Pressurization in Undrained Conditions	513
	12.7	Theoretical Analysis of Undrained Conditions— Thermal Pressurization	515
	12.8	Temperature Effect on Mechanical Characteristics	517
	12.9	Unsaturated Soil	523
	12.10	Thermo-Hydro-Mechanical Coupling	524
	12.11	Thermally Driven Moisture Flow	525
	12.12	An Introduction to Ground Freezing	526
	12.13	Ground-Freezing Processes	529
	12.14	Frost Heave and Ice Lens Formation	535
	12.15	Mechanical Behavior of Frozen Soil	538
	12.16	Concluding Comments	543
		Questions and Problems	544
<b>CHAPTER 13</b>		<b>TIME EFFECTS ON STRENGTH AND DEFORMATION</b>	<b>545</b>
	13.1	Introduction	545
	13.2	General Characteristics	546
	13.3	Fundamental Mechanisms of Time-Dependant Behavior: Rate Process Theory	553
	13.4	Bonding, Effective Stresses, and Strength	557
	13.5	Shearing Resistance as a Rate Process	562
	13.6	Interpreting Soil Behavior Using Rate Process Theory	562
	13.7	Rate Effects on Stress–Strain Relationships of Clay	565
	13.8	Rate Effects on Stress–Strain Relationships of Sand	570
	13.9	Rate Effects on Stiffness and Cyclic Response	572
	13.10	Creep	574
	13.11	Creep Rupture	586
	13.12	Stress Relaxation	592
	13.13	Aging	592
	13.14	Mechanisms for Soil Property Changes During Sand Aging	599
	13.15	Inertia Effects and Rapid Flows	603
	13.16	Concluding Comments	604
		Questions and Problems	604
		References	607
		Index	651
