Preface **xi**
Acknowledgments **xiii**
List of Abbreviations **xv**

A. HISTORY & METHODS

1.	Introduction to Sleep Research	3	2.6	Issues related to laboratory sleep studies	28
1.1	Overview	3	2.7	Other methods of studying sleep	30
1.2	Why sleep?	3	3.	History and Methods of Circadian Rhythms Research	35
1.3	Early research on sleep	5	3.1	Overview	35
1.4	Dreams and REM sleep	8	3.2	A short history of circadian rhythms research	35
2.	Methods for Sleep Research	15	3.3	Studying circadian rhythms	37
2.1	Overview	15	3.4	Masking effects	42
2.2	Measuring sleep	15	3.5	Studying human circadian rhythms	43
2.3	Stages of sleep	18	3.6	Impacts of laboratory environments	45
2.4	Sources of EEG patterns	23			
2.5	The rhythms of sleep	25			

B. FACTORS AFFECTING SLEEP

4. Sleep Across the Human Lifespan	51	5.3	Homeostatic regulation of sleep and slow-wave activity	86	
4.1	Overview	51	5.4	Alternatives to homeostatic regulation	94
4.2	Sleep in infants	51	5.5	Homeostatic regulation of REM sleep	100
4.3	Sleep in childhood	55	5.6	Models of REM sleep regulation	104
4.4	Sleep in adolescence	58	5.7	The two-process model of sleep regulation	107
4.5	Sleep in adult women	68	6. Cultural and Environmental Effects on Sleep	118	
4.6	Sleep in adulthood and aging	70	6.1	Overview	118
4.7	Challenges in studying aging effects on sleep	76	6.2	Cultural, social, and geographic influences on sleep	118
5. Homeostatic and Circadian Regulation of Sleep	84	6.3	Cultural anthropology of sleep	120	
5.1	Overview	84	6.4	Control of lighting	122
5.2	Homeostasis	84			

- 6.5 Observational and experimental studies of sleep in preindustrial societies 125
- 6.6 Sleep patterns over recent decades 128
- 6.7 The co-sleeping controversy 131

7. Sleep in Other Species 138

- 7.1 Overview 138

- 7.2 Measuring sleep across species 138
- 7.3 Sleep in invertebrates 142
- 7.4 Differences in sleep patterns among mammals 143
- 7.5 Unihemispheric sleep 151
- 7.6 Seasonal changes in sleep 158

C. PHYSIOLOGICAL MECHANISMS

8. Suprachiasmatic Nuclei, Sleep, and Aging 167

- 8.1 Overview 167
- 8.2 Physiological mechanisms generating daily rhythms 167
- 8.3 Role of the SCN in sleep regulation 179
- 8.4 Role of the circadian system in aging effects on sleep 183
- 8.5 Are older people less affected by sleep loss? 190

9. Pineal Gland and Melatonin 206

- 9.1 Overview 206
- 9.2 The pineal gland and the circadian system 206
- 9.3 Seasonal physiological regulation: a model for melatonin’s function 210
- 9.4 Melatonin as a chronobiotic 212
- 9.5 Melatonin and sleep 215
- 9.6 Clinical uses of melatonin 223
- 9.7 Melatonin and circadian amplitude 227
- 9.8 Cautions in the use of melatonin 231

10. Brainstem Regulation of Sleep and Waking 240

- 10.1 Overview 240
- 10.2 States of arousal 240
- 10.3 Norepinephrine 243
- 10.4 Dopamine 245

- 10.5 Serotonin 249
- 10.6 Brainstem glutamate and GABA systems 254
- 10.7 Pontine acetylcholine 255
- 10.8 Acting out one’s dreams 260

11. Forebrain Regulation of Sleep and Waking 266

- 11.1 Overview 266
- 11.2 Tuberomammillary nucleus and histamine 266
- 11.3 Lateral hypothalamus 270
- 11.4 Preoptic area 281
- 11.5 Basal forebrain nuclei and acetylcholine 283
- 11.6 Adenosine, astrocytes, and sleep homeostasis 286
- 11.7 Other physiological regulators of sleep 291
- 11.8 Overview of forebrain systems involved in sleep regulation 293

12. Thalamocortical Mechanisms 301

- 12.1 Overview 301
- 12.2 Generating cortical rhythms 301
- 12.3 Information processing during sleep 309
- 12.4 Sleep protection and information processing in NREM sleep 315
- 12.5 Modulation of awareness during sleep 319
- 12.6 Sleep as a local cortical phenomenon 323

D. IMPACTS OF SLEEP DURATION & QUALITY

13. Behavioral Effects of Inadequate Sleep and Shift Work 337

- 13.1 Overview 337
- 13.2 How much sleep do you need? 337
- 13.3 Sleep loss and sustained attention 340
- 13.4 Individual differences in response to sleep loss 349
- 13.5 Sleep loss, circadian phase, and performance 353
- 13.6 Banking effects of sleep duration 356
- 13.7 Sleep loss and executive task performance 357
- 13.8 Effects of sleep loss on emotional regulation and perception 360
- 13.9 Adverse work hours and shift work 363
- 13.10 Physiological effects of jet lag and shift work 367

14. Sleep and Human Health, Part A 381

- 14.1 Overview 381
- 14.2 Studying sleep deprivation 381

- 14.3 Effects of “total” sleep deprivation 384
- 14.4 Studying effects of sleep duration 389
- 14.5 Sleep-disordered breathing 393
- 14.6 Sleep, metabolic syndrome, and glucose regulation 393
- 14.7 Sleep and body weight regulation 398
- 14.8 Sleep and vascular disease 406
- 14.9 Sleep and the immune system 410

15. Sleep and Human Health, Part B 421

- 15.1 Overview 421
- 15.2 Sleep and pain 421
- 15.3 Sleep, anxiety, and mood disorders 424
- 15.4 Sleep and schizophrenia 431
- 15.5 Sleep and Alzheimer’s disease 435
- 15.6 Sleep and mortality risk 442
- 15.7 Why long and short sleep are related to illness and mortality risk 447

E. FUNCTIONS OF SLEEP

16. Models of the Functions of Sleep 461

- 16.1 Overview 461
- 16.2 Ecological/circadian models 461
- 16.3 Physiological models 464

17. The Role of Sleep in Memory 468

- 17.1 Overview 468
- 17.2 Introduction to sleep and memory 468
- 17.3 Studying how sleep affects memory 471
- 17.4 Explicit (declarative) learning 475
- 17.5 REM sleep, emotional content, and memory 478
- 17.6 Sensory/perceptual learning 480
- 17.7 Motor/procedural learning 483

- 17.8 Separate or overlapping roles for NREM and REM sleep? 485
- 17.9 Modulators of sleep effects on memory 486
- 17.10 Sleep effects on memory over the lifespan 490
- 17.11 Insight and problem-solving during sleep 493

18. Physiology of Sleep Effects on Memory 501

- 18.1 Overview 501
- 18.2 Sleep and neural plasticity: long-term potentiation 501
- 18.3 Sleep and neural plasticity: visual cortex 503
- 18.4 Neural replay and plasticity 506
- 18.5 An aside on hippocampal neurogenesis, sleep, and depression 509

18.6	System-level consolidation in NREM sleep	510	18.14	Learning during sleep	530
18.7	Neural basis for motor skill learning	516	18.15	Sleep effects on synaptic strength	533
18.8	Spindles across the lifespan	517			
18.9	Sleep spindles and intelligence	519	19.	Neural Plasticity and the Functions of Sleep	542
18.10	REM sleep and memory consolidation	520	19.1	Overview	542
18.11	Sensory enhancement of memory during sleep	523	19.2	The involvement of sleep in neural plasticity and memory	542
18.12	Manipulating sleep EEG features to enhance memory	525	19.3	Species differences	544
18.13	Neurochemical effects on sleep-related consolidation	528	19.4	Epilogue on the functions of sleep	544

APPENDICES

Appendix A Dreaming and its Mechanisms in REM and NREM Sleep 549

A.1	Dreaming in REM and NREM sleep	549
A.2	Neurophysiological basis of dreaming	551

Appendix B Obstructive Sleep Apnea 555

Appendix C Methods for Studying Neural Mechanisms Related to Sleep 558

C.1	Correlating neurotransmitter levels with sleep stages	558
-----	---	-----

C.2	Measuring neuronal activity during sleep stages	558
C.3	Manipulating neural functions chemically or electrically	559
C.4	Ablation (lesion) methods	560
C.5	Genetic methods to increase or decrease gene expression	560
C.6	Optogenetic methods	561
C.7	Pharmacogenetic methods	561
C.8	Studying clinical populations with neurotransmitter defects	561

Appendix D Narcolepsy, Influenza, and the Immune System 563

Index	565
-------	-----
