

Contents

I. Liver Structure

Chapter 1

Liver Structure and Innervation

Dieter Sasse

1. Introduction	3
2. Liver Structure	4
2.1. Development	4
2.2. General Histology	5
2.3. Ploidy	6
2.4. Ultrastructure	8
2.5. Sinusoidal Cells	12
2.6. Architecture of Liver Parenchyma	14
3. Innervation of the Liver	19
3.1. Macroscopic Aspects	19
3.2. Microscopic Aspects	19
3.3. Electron-Microscopic Aspects	21
4. Summary	22
References	23

Chapter 2

Hepatic Hemodynamics and Microcirculation

P. G. Withrington and P. D. I. Richardson

1. Introduction	27
2. Hepatic Vascular Resistance: Control Values	28

3. Techniques	29
4. Hepatic Arterial Resistance	30
4.1. Intrinsic Regulation	30
4.2. Blood Gases	31
4.3. Osmolarity	31
4.4. Nervous Control	31
4.5. Gastrointestinal and Pancreatic Hormones	32
4.6. Catecholamines and Related Drugs	33
4.7. Autacoids and Systemic Peptide Hormones	33
4.8. Summary	34
5. Portal Venous Resistance	35
5.1. Intrinsic Regulation	35
5.2. Blood Gases	35
5.3. Osmolarity	36
5.4. Nervous Control	36
5.5. Gastrointestinal and Pancreatic Hormones	36
5.6. Catecholamines and Related Drugs	37
5.7. Autacoids and Systemic Peptide Hormones	38
5.8. Summary	39
6. Interrelationship Between the Hepatic Artery and the Portal Vein . . .	41
6.1. Mutual Pressure–Flow Curves	41
6.2. “Transhepatic” Drug Effects	42
7. Capacitance and Exchange	44
7.1. Regulation of Liver Volume	44
7.2. Exchange in the Hepatic Microcirculation	47
8. Relationship of Liver Circulation to Liver Function	48
8.1. Postprandial Hyperemia	48
8.2. Metabolic Stimulation	48
9. Summary	49
References	49

II. Methods

Chapter 3

Histology and Histochemistry

Dieter Sasse

1. Introduction	57
2. Histology	58
2.1. Tissue Pretreatment	58

2.2. Routine Staining Methods	64
2.3. Special Staining Methods	66
3. Histochemistry	68
3.1. Substances	68
3.2. Enzymes	73
4. Summary	83
References	84

Chapter 4

Immunohistochemistry

Jeffrey Baron, Jeffrey M. Voigt, Thomas T. Kawabata, and Jan A. Redick

1. Introduction	87
2. Tissue Preparation	89
2.1. General Considerations	89
2.2. Fixation Procedures	90
2.3. Embedding Procedures	92
2.4. Unfixed, Frozen Sections	93
3. Immunoenzymatic Techniques	94
3.1. General Considerations	94
3.2. Direct and Indirect Peroxidase Methods	97
3.3. Unlabeled Antibody Peroxidase–Antiperoxidase Method	99
3.4. Avidin–Biotin–Peroxidase Method	101
4. Immunofluorescence Techniques	102
4.1. General Considerations	102
4.2. Direct Immunofluorescence	103
4.3. Indirect Immunofluorescence	104
5. Dual-Labeling Techniques	106
5.1. General Considerations	106
5.2. Dual Immunoenzymatic Labeling Methods	106
5.3. Dual Immunofluorescence Labeling Methods	107
5.4. Combined Immunoenzymatic and Immunofluorescence Labeling Methods	107
6. Quantitative Immunohistochemical Techniques	108
6.1. General Considerations	108
6.2. Microdensitometry	109
6.3. Microfluorometry	110
7. Summary	112
References	112

*Chapter 5****Quantitative Histochemical Measurements within Sublobular Zones of the Liver Lobule****Frederick C. Kauffman and Franz M. Matschinsky*

1. Introduction	119
2. Preparation of Tissue Samples for Analyses	120
2.1. Sampling and Sectioning of Tissues	120
2.2. Drying and Storage of Samples	121
2.3. Identification of Sublobular Zones and Histological Control	122
2.4. Dissection and Weighing of Samples	122
3. Analytical Procedures	123
3.1. General Considerations	123
3.2. Examples of Quantitative Histochemical Measurements in Liver	130
4. Advantages and Limitations of the Quantitative Histochemical Approach	132
References	133

*Chapter 6****Separation of Functionally Different Liver Cell Types****Kai O. Lindros, Gunnar Bengtsson, Mikko Salaspuro, and Hannu Väänänen*

1. Introduction	137
2. Dispersion of Liver Tissue into Isolated Cells	138
2.1. Mechanical and Chemical Methods	138
2.2. Enzymatic Methods	139
3. Separation of Hepatocytes and Nonhepatocytes	140
3.1. Centrifugation Methods	140
3.2. Enzymatic Methods	140
4. Separation of Various Types of Nonhepatocytes	140
4.1. Kupffer Cells and Endothelial Cells	142
4.2. Fat-Storing Cells and Pit Cells	142
4.3. Cells from the Vascular Trees	142
5. Separation of Periportal and Perivenous Hepatocytes	143
5.1. Background	143
5.2. Separation Based on Physicochemical Differences	143
5.3. Separation of Cells from Either Subacinar Zone	148
6. Conclusions	152
7. Summary	153
References	153

Chapter 7

New Micromethods for Studying Sublobular Structure and Function in the Isolated, Perfused Rat Liver*John J. Lemasters, Sungchul Ji, and Ronald G. Thurman*

1. Introduction	159
1.1. Criteria for Direct, Dynamic Measurements of Sublobular Events with Miniature Probes	160
2. Miniature Probes	160
2.1. Micro-Light Guide	160
2.2. Miniature Oxygen Electrode	164
3. Localization of Sublobular Regions on the Surface of Perfused Liver	167
3.1. Models of Liver Lobular Structure	167
3.2. India Ink Injections and Vascular Casts	168
3.3. Microcirculation at the Liver Surface	169
3.4. Hepatic Lobular Continuum	173
4. Lobular Oxygen Gradients	173
4.1. Surface Measurements of NADH Fluorescence	173
4.2. Surface Oxygen Tension	175
4.3. Precautions and Other Considerations	178
5. Other Applications of Miniature Probes	178
5.1. NAD ⁺ -linked Cellular Metabolism	178
5.2. Mixed-Function Oxidations	178
6. Assessment of Liver Injury After Toxic or Metabolic Insult	179
6.1. Light and Electron Microscopy	180
6.2. Enzyme Release	180
7. Conclusion	181
References	182

Chapter 8

Redox Scanning in the Study of Metabolic Zonation of Liver*Bjørn Quistorff and Britton Chance*

1. Introduction	185
2. Indicators of the Intracellular Redox State of Pyridine Nucleotides ..	186
2.1. Indicator Metabolite Method	186
2.2. Tissue Fluorescence	187
2.3. Different Pyridine Nucleotide Pools	189
2.4. Flavoprotein/Pyridine Nucleotide Ratio Method	190

3. Low-Temperature Scanning Technique	193
3.1. General Description	193
3.2. Details of the Instrument	194
4. Spatial Resolution of the Instrument	195
5. Freeze-Quenching of Tissue	195
6. Examples of Scanning Results	197
6.1. Histogram Distribution of Redox States	197
6.2. Two- and Three-Dimensional Redox-Ratio Images	200
7. Conclusions	204
8. Summary	204
References	204

III. Distribution of Metabolic Functions

Chapter 9

Metabolism of Carbohydrates

Kurt Jungermann and Norbert Katz

1. Introduction	211
2. Role of the Liver in the Metabolism of Carbohydrates: Interorgan Relationships	212
2.1. Glucose Uptake	212
2.2. Glucose Release	213
3. Role of Substrates, Hormones, and Nerves in the Regulation of Carbohydrate Metabolism	215
3.1. Glycogen Metabolism	216
3.2. Glycolysis and Gluconeogenesis	218
4. Role of Zonal Hepatocyte Heterogeneity in the Regulation of Carbohydrate Metabolism	219
4.1. Zonal Distribution of Enzymes	220
4.2. Zonal Heterogeneity of Signals and Signal Transmission	223
4.3. Functional Significance of Zonal Heterogeneity: Metabolic Zonation	225
4.4. Comparison of Non-zonation and Zonation Models for the Regulation of Carbohydrate Metabolism	230
5. Summary	231
References	232

Chapter 10

Metabolism of Lipids

Norbert Katz

1. Introduction	237
2. Role of the Liver in the Metabolism of Lipids:	
Interorgan Relationships	237
2.1. Fatty Acid Synthesis	237
2.2. Lipolysis and β -Oxidation	238
2.3. Ketogenesis	238
2.4. Esterification	239
2.5. Lipoprotein Formation and Processing	239
3. Role of Metabolites and Hormones in the Regulation of Lipid Metabolism	241
3.1. Liponeogenesis	241
3.2. Lipolysis and β -Oxidation	243
3.3. Ketogenesis	244
3.4. Esterification	244
3.5. Lipoprotein Metabolism	245
4. Zonal Hepatocyte Heterogeneity of Lipid Metabolism	245
4.1. Liponeogenesis	245
4.2. β -Oxidation	247
4.3. Ketogenesis	247
4.4. Lipoprotein Metabolism	248
5. Summary	249
References	249

Chapter 11

Metabolism of Amino Acids and Ammonia

Dieter Häussinger and Wolfgang Gerok

1. Introduction	253
2. Role of the Liver in the Metabolism of Amino Acids and Ammonia	254
2.1. Interorgan Relationships in Amino Acid Metabolism	254
2.2. Interorgan Relationships in Ammonia Metabolism	258
3. Regulation of Hepatic Amino Acid and Ammonia Metabolism: Role of Transport, Substrates, and Hormones	260
3.1. Amino Acid Metabolism	260
3.2. Ammonia Metabolism	265
4. Role of Zonal Hepatocyte Heterogeneity in the Regulation of Amino Acid and Ammonia Metabolism in the Liver	268

4.1. Zonal Distribution of Enzymes	268
4.2. Dynamics of Zonal Hepatocyte Heterogeneity in Amino Acid and Ammonia Metabolism	270
4.3. Functional Significance of Zonal Hepatocyte Heterogeneity in Amino Acid and Ammonia Metabolism	274
5. Summary	284
References	285

Chapter 12

Lobular Oxygen Gradients: Possible Role in Alcohol-Induced Hepatotoxicity

Ronald G. Thurman, Sungchul Ji, and John J. Lemasters

1. Introduction	293
2. Oxygen Uptake	293
3. Ethanol Metabolism	295
3.1. Alcohol Dehydrogenase	295
3.2. Catalase	297
3.3. Cytochrome P-450	298
3.4. Swift Increase in Alcohol Metabolism	299
3.5. Physiological Trigger for the Increase in Oxygen Uptake Caused by Ethanol Administration	302
3.6. Mechanism of Increase in Hepatic Oxygen Uptake Caused by Treatment with Ethanol	302
3.7. Role of Glycolysis in the Mechanism of Increased Oxygen Uptake Caused by Treatment with Ethanol	303
4. Role of Hypoxia in Liver Damage	303
4.1. Hepatic Oxygen Supply	305
4.2. Is Hypoxia Involved in the Mechanism of Alcohol-Induced Liver Damage?	307
References	316

Chapter 13

Biotransformation and Zonal Toxicity

Ronald G. Thurman, Frederick C. Kauffman, and Jeffrey Baron

1. Zonal Toxicity	321
1.1. General Considerations	321
1.2. Agents That Cause Damage in Periportal Regions of the Liver Lobule	324

1.3. Agents That Cause Damage in Pericentral Regions of the Liver Lobule	325
2. Mixed-Function Oxidation	327
2.1. General Considerations	327
2.2. Intralobular Distributions of Xenobiotic-Metabolizing Enzymes	338
2.3. Sources of Reducing Equivalents in Specific Regions of the Liver Lobule	345
2.4. Distribution of Function in Intact Periportal and Pericentral Regions of the Liver	347
3. Conjugation Reactions	354
3.1. General Considerations	354
3.2. Glucoronidation	357
3.3. Sulfation	361
3.4. Mercapturic Acid Synthesis	364
4. Conclusions	367
References	367

Chapter 14

Protein Synthesis and Secretion

A. V. LeBouton

1. Introduction	383
2. Interorgan Relationships	383
3. Regulation of Hepatic Protein Synthesis by Extrahepatic and Hepatic Factors	385
3.1. Photoperiod	385
3.2. Nutrition	385
3.3. Osmotic Pressure	386
3.4. Hormones	386
3.5. Age	386
3.6. Polyploidy	387
3.7. Stress	387
3.8. Genetic Diseases	388
3.9. Blood Flow	388
3.10. Turnover	388
4. Regulation of Hepatic Protein Synthesis at the Subcellular Level	389
4.1. Transcription	389
4.2. Competition for Ribosomes	389
4.3. Translation	389
4.4. Transport	390
4.5. Secretion	390

5. Intraacinar Localization	390
5.1. Radioautography	391
5.2. Immunohistology	395
6. Intracellular Localization	403
7. Summary	404
References	405

Chapter 15

Bile Acid Metabolism

Jorge J. Gumucio, William F. Balistreri, and Fred J. Suchy

1. Introduction	411
2. Functional Units	412
2.1. Mature Liver	412
2.2. Developing Liver	412
3. Bile Acid Transport	413
3.1. Enterohepatic Circulation	413
3.2. Unidirectional Perfusion of Bile Acids	414
3.3. Mechanisms of Bile Acid Uptake	414
3.4. Zonal Uptake of Bile Acids	415
4. Intracellular Metabolism of Bile Acids in the Mature Liver	420
4.1. Bile Acid Synthesis	420
4.2. Bile Acid Conjugation	424
4.3. Intracellular Transport	424
4.4. Biliary Secretion	425
5. Hepatocellular Metabolism and Transport of Bile Acids during Liver Development	426
5.1. Concept of "Physiologic Cholestasis" in Infancy	426
5.2. Bile Acid Metabolism	429
5.3. Bile Acid Transport	430
6. Summary	434
References	434

IV. Induction of Liver Cell Heterogeneity

Chapter 16

Zonal Signal Heterogeneity and Induction of Hepatocyte Heterogeneity

Kurt Jungermann

1. Introduction	445
2. Zonal Heterogeneity of Signals and Signal Transmission.....	446
2.1. Oxygen	446
2.2. Carbon Substrates	447
2.3. Hormones	449
2.4. Nerves	452
2.5. Hormone Receptors	453
3. Induction of Zonal Hepatocellular Heterogeneity	453
3.1. Modulation of Enzyme Induction by Oxygen.....	454
3.2. Insulin–Glucagon Antagonism in Enzyme Induction	455
3.3. Role of the Hepatic Nerves in Enzyme Induction	458
3.4. Dynamics of Zonal Hepatocyte Heterogeneity	458
3.5. Conclusion	464
4. Summary	464
References	466

V. Speculations and Directions for the Future

Challenges for the Future	473
