<i>The contributors</i>	ix
<i>Preface to the Series</i>	xxi
<i>Preface</i>	xxiii
1 New concepts in relation to the pathophysiology of Alzheimer's disease <i>A. N. Davison</i>	1
2 The 'autocannibalism' of choline-containing membrane phospholipids in the pathogenesis of Alzheimer's disease <i>R. J. Wurtman, J. K. Blusztajn and J.-C. Maire</i>	17
3 Future prospects offered by positron emission tomography for the study of Alzheimer's disease <i>J. C. Baron</i>	23
4 The neuronal cytoskeleton and neurofibrillary tangles <i>B. H. Anderton, J.-P. Brion, J. Flament-Durand, M. C. Haugh, J. Kahn, C. C. J. Miller, A. Probst and J. Ulrich</i>	35
5 Neurochemical and behavioural effects following lesions of the nucleus basalis in the rat <i>G. Pepeu, F. Casamenti, F. Pedata, F. Orzi, G. Diana and E. Palumbo</i>	53
6 In search of possible markers and models in Alzheimer's disease. <i>M. Briley, M. Brown, P. Chopin, X. Heral and C. Moret</i>	63
7 Neurotransmitter systems in Alzheimer's disease <i>S. De St Hilaire-Kafi, C. Bouras and J. Constantinidis</i>	73
8 Serotonin neurones and receptors in Alzheimer's disease <i>D. N. Middlemiss, D. M. Bowen and A. M. Palmer</i>	89
9 Two drug binding sites on muscarinic receptors <i>N. J. M. Birdsall, E. C. Hulme, W. Kromer, B. S. Peck, J. M. Stockton and M. J. Zigmond</i>	103

- 10 Soluble and membrane-bound forms of choline-*o*-acetyltransferase activity in the purely cholinergic neurons of *Torpedo*. *L. Eder-Colli, S. Amato and Y. Froment* 122
- 11 Regulation and biosynthesis of cholinesterases in the human brain *H. Soreq and H. Zakut* 140
- 12 An immunohistochemical study comparing selected features of the anatomy of cholinergic innervation in the cerebral cortex of six mammalian species *F. Eckenstein* 157
- 13 Cell biology of forebrain cholinergic neurons: effect of NGF, triiodothyronine and gangliosides *F. Hefti* 169
- 14 Dissociated monolayer cultures of human spinal cord *A. C. Kato, L. Erkman and G. Touzeau* 181
- 15 A glycoprotein from muscle-conditioned medium involved in the differentiation of rat cholinergic neurons in culture: partial purification and regulation of neurotransmitter metabolism enzymes in central-nervous-system cultures *M. C. Giess, J. C. Martinou, B. Raynaud, C. Delteil, A. Le Van Thai, S. Vidal and M. Weber* 190
- 16 Neurite-promoting factors for embryonic spinal neurons: studies on development in the chick and possible importance for the understanding of degenerative disorders of the nervous system *T. Taguchi and C. E. Henderson* 203
- 17 Molecular biology as a possible approach to human inherited disorders *I. Oberlé* 216
- 18 Genetics of Alzheimer's disease: a large kindred with apparent Mendelian transmission; possible implications for a linkage study *J.-F. Foncin, D. Salmon and A. C. Bruni* 242
- 19 DNA markers in familial Alzheimer's disease *P. H. St George-Hyslop, R. Tanzi, W. Hobbs, K. Gibbons, J. F. Gusella, L. Nee, R. Polinsky, J. Haines and P. M. Conneally* 257
- 20 Behavioural recovery following 6-OHDA lesion of the nucleus accumbens and intra-accumbens implantation of dopaminergic grafts *K. Choulli, J. P. Herman, D. Nadaud, K. Taghzouti, H. Simon and M. Le Moal* 265

CONTENTS

vii

21 Transplantation of 5-HT neurons to the adult rat brain *A. Privat,*
H. Mansour, M. Geffard and M. Lerner-Natoli 280

Index 301
