

CONTENTS

<i>Preface</i>	PAGE V
--------------------------	-----------

CHAPTER 1

BOILER TYPES AND THEIR CHARACTERISTICS

1. The Economic Boiler	3
2. The Lancashire Boiler	7
3. Vertical Shell Boilers	11
4. Water-tube Boilers	14
5. Fluctuating Loads on Boilers.	15

CHAPTER 2

NOTES ON THERMAL TESTING

1. Feed Water	17
2. Steam	18
3. Fuel	19
4. Duration of Boiler Test.	20
5. Flue Gas Sampling	20
6. Flue Gas Temperature Measurement	21
7. Combustion Air	22
8. Draught	23
9. External Heat Losses	23
10. Auxiliary Plant	24
11. Air Infiltration and By-passing	25
12. Expressing the Thermal Efficiency of the Boiler	25

CHAPTER 3

OBSERVATIONS AND ANALYSES

1. Description of Test Boiler and Plant	27
2. Observations and Deductions.	29

CHAPTER 4

COMBUSTION CALCULATIONS

	PAGE
1. Theoretical Weight of Air required for Combustion . . .	33
2. Analysis of the Products of Perfect Combustion of One Pound of Fuel	36
3. Excess Air supplied for Combustion	38
4. Volume of Dry Products of Combustion.	40
5. Summary of Combustion Air and Gas Data	41
6. Theoretical Temperature developed over Fuel Bed	41
7. Actual Volume of Combustion Gases	43
8. Actual Velocity of Combustion Gases	44
9. Combustion of Liquid Fuels	44
10. Combustion of Gaseous Fuels	45

CHAPTER 5

COMBUSTION LOSSES

1. Loss due to Moisture in the Fuel as Fired	49
2. Loss due to Moisture formed in the Burning of the Hydrogen in the Fuel	49
3. Loss due to Moisture in the Combustion Air	50
4. Loss of Sensible Heat in the Steam used by Jets under Fire-grates	51
5. Loss due to Incomplete Combustion of Carbon	52
6. Loss due to Unburned Carbon in Ashes, Clinker, and Riddlings.	52
7. Loss of Sensible Heat in Ashes and Clinker	53
8. Loss due to Heat carried away in Dry Chimney Gases	54
9. Loss due to Radiation and Convection from Exposed Boiler and Brickwork Surfaces	55
10. Loss due to Unburned Hydrogen, Hydrocarbons, and the "Unaccounted"	60

CHAPTER 6

BOILER THERMAL EFFICIENCIES AND
HEAT TRANSFER

	PAGE
1. Boiler, Superheater, Economizer, and Stoker Efficiencies	61
2. Heat in Gases at any Temperature	66
3. Heat Gradient through Boiler Gas Circuit	67
4. Heat Balance	70
5. Ash Balance	71
6. Cost of Steam Generation	72

CHAPTER 7

FURTHER BOILER THERMAL TESTS USING
DIFFERENT FUELS

1. Economic Boiler Plant Burning Oil Fuel	75
2. Water-tube Boiler Plant Burning Coke-oven Gas	81
3. Loco Type Boiler Burning Wood Refuse.	94

APPENDIX 1. FUEL, WATER, AND STEAM DATA

1. Calorific Values of Fuels	101
2. Conversion of Fuel Analysis	102
3. Equivalent Evaporation F. & A. 212°F	103
4. Properties of Dry Saturated Steam	104
5. Heat in Superheated Steam	106
6. Molecular Weights of Gases	107
7. Theoretical Combustion Data	108
8. Heat of Formation and Combustion	109
9. Correction of Gas Volume for Temperature	110
10. Weights and Volumes of Gases	112
11. Volume of Steam at Various Temperatures	112
12. Feed Water Correction for Temperature	114

APPENDIX 2. THE CALCULATION OF THE SPECIFIC HEATS OF
GASEOUS MIXTURES

116

	PAGE
APPENDIX 3. BOILER HOUSE AIR DATA	125
APPENDIX 4. HEAT LOSSES FROM EXPOSED BOILER SURFACES	
1. Heat Loss by Radiation	128
2. Heat Loss by Natural Convection	130
3. Heat Loss by Forced Convection	131
4. Thermal Resistance of Firebrick	134
APPENDIX 5. BOILER HEAT LOSS AND FUEL GRAPHS	135
APPENDIX 6. SUMMARY OF THEORETICAL COMBUSTION FORMULAE	143
<i>Bibliography</i>	145
<i>Index.</i>	147
