Preface	v
<i>Chapter 1</i>	
<i>Biosynthesis of cholesterol</i>	
Hans C. Rilling and Liliane T. Chayet (Salt Lake City and Santiago)	1
I. Introduction	1
II. Source of acetyl-CoA	2
III. Acetyl-CoA acetyl transferase (EC 2.3.1.9)	3
1. Cellular location	3
2. Enzymology	4
3. Mechanism	4
IV. 3-Hydroxy-3-methylglutaryl-CoA synthetase (EC 4.1.3.5)	5
1. Cellular location	5
2. Enzymology	6
3. Mechanism	7
V. 3-Hydroxy-3-methylglutaryl-CoA reductase (EC 1.1.1.34)	8
1. Enzymology	9
2. Mechanism	9
3. Regulation	11
VI. Mevalonate-5-phosphotransferase (EC 2.7.1.36)	12
VII. Phosphomevalonate kinase (EC 2.7.4.2)	12
VIII. Pyrophosphomevalonate decarboxylase (EC 4.1.1.33)	13
IX. Isopentenyl pyrophosphate isomerase (EC 5.3.3.2)	14
1. Enzymology	14
2. Substrate specificity	15
3. Mechanism	16
X. Prenyltransferase (EC 2.5.1.1)	17
1. Enzymology	17
2. Substrate binding	18
3. Mechanism	19
4. Kinetics	20
5. Termination	21
6. Analogs	22
XI. Squalene synthetase	23
1. Enzymology	23
2. Kinetics	24
3. Analogs	24
4. Mechanism	25
XII. Squalene epoxidase and cyclase	27
1. Enzymology	27
2. Mechanism	28

XIII. The conversion of lanosterol to cholesterol	31
1. Sterol function	31
2. General aspects of enzymology	31
3. The pathway	32
4. Decarbonylation at C-14	32
5. Decarboxylation at C-4	34
6. Introduction of Δ^5	36
Acknowledgement	37
References	37

Chapter 2

Control mechanisms in sterol uptake and biosynthesis

John F. Gill Jr., Peter J. Kennelly and Victor W. Rodwell (West Lafayette) . 41

I. Control of sterol uptake	41
1. Plasma lipoproteins	41
a. Normal plasma lipoproteins, 41 — b. Abnormal plasma lipoproteins, 44 — c. Chemically modified lipoproteins, 44 —	
2. Cellular mechanisms of cholesterol uptake	44
a. The LDL receptor and receptor-mediated endocytosis, 45 — b. Other receptor-mediated lipoprotein uptake mechanisms, 48 — c. Receptor-independent cholesterol uptake, 51	
3. Regulation of receptor-mediated sterol uptake	52
4. Diseases related to receptor-mediated cholesterol uptake	54
a. Homozygous FH, receptor-negative and receptor-defective, 54 — b. Heterozygous FH, 56 — c. Homozygous FH, internalization-defective, 56 — d. Wolman syndrome, 56 — e. Cholesterol ester storage disease, 56 —	
II. Control of sterol biosynthesis	57
1. Mammalian HMG-CoA reductase	57
a. Rate-limiting step in sterol biosynthesis, 57 — b. Distribution, 57 — c. Diurnal rhythm and developmental pattern, 58 — d. Regulation of HMG-CoA reductase protein level, 59 — e. Modulation of HMG-CoA reductase activity, 62 —	
2. Other sites of control	65
a. Early sites of control, 65 — b. Later sites of control, 66 —	
Acknowledgements	67
References	67

Chapter 3

Participation of sterol carrier proteins in cholesterol biosynthesis, utilization and intracellular transfer

Terence J. Scallen and George V. Vahouny (Albuquerque and Washington) 73

I. Introduction	73
II. Sterol carrier protein ₁ (SCP ₁)	74
1. Purification and characterization of SCP ₁	74
2. Substrate specificity	74
3. Participation of SCP ₁ in the conversion of enzymatically generated, microsome-bound squalene to sterol	75
4. Properties of SCP ₁	75

III.	Sterol carrier protein ₂ (SCP ₂)	77
1.	Participation of SCP ₂ in cholesterol biosynthesis	77
a.	General remarks, 77 — b. Purification and characterization of SCP ₂ , 77 — c. Substrate specificity, 78 — d. Kinetic studies, 78 — e. Anti-SCP ₂ IgG, 79—	
2.	Participation of SCP ₂ in cholesterol utilization	80
a.	Cholesterol esterification, 80 — b. Cholesterol 7 α -hydroxylase, 81 —	
3.	Participation of SCP ₂ in intracellular cholesterol transfer	82
a.	SCP ₂ is required for cholesterol transport from adrenal lipid droplets to mitochondria, 82 — b. Identification of adrenal SCP ₂ , 84 — c. SCP ₂ facilitates the translocation of cholesterol from the outer to the inner mitochondrial membrane, 85 —	
4.	Comparison of SCP ₂ with other low molecular weight proteins	87
a.	Fatty-acid-binding protein (FABP), 87 — b. Nonspecific phospholipid exchange protein, 90 —	
IV.	The participation of sterol carrier proteins in intracellular cholesterol metabolism	91
	Acknowledgements	91
	References	91

Chapter 4

Biosynthesis, function and metabolism of sterol esters

	Alan Jones and John Glomset (Seattle)	95
I.	Introduction	95
II.	Distribution and physical properties of cholesterol esters	95
III.	Enzymes and proteins that mediate the formation, transport, and hydrolysis of cholesterol esters	98
1.	Acyl-CoA : cholesterol acyltransferase (EC 2.3.1.26)	98
2.	Cholesterol ester hydrolase (EC 3.1.1.13)	101
a.	Acid CEH, 101 — b. Neutral CEH, 102 —	
3.	Lecithin : cholesterol acyltransferase (EC 2.3.1.43)	103
4.	Plasma cholesterol ester transfer protein	106
IV.	Physiology of cholesterol esters	107
1.	Plasma lipoprotein cholesterol esters	107
2.	Tissue cholesterol esters	110
a.	Fibroblasts, 111 — b. Cells that form steroid hormones, 112 — c. Macrophages, 112 — d. Hepatocytes, 113 —	
V.	Cholesterol sulfate	113
VI.	Cholesterol esters and disease	114
VII.	Conclusion	116
	References	116

Chapter 5

Cholesterol absorption and metabolism by the intestinal epithelium

	Eduard F. Stange and John M. Dietschy (Dallas)	121
I.	Introduction	121
II.	Absorption of cholesterol	123
III.	Intestinal cholesterol synthesis	125
1.	Methodology	125
2.	Localization	126

3. Regulation	128
4. Function	132
IV. Intestinal lipoprotein uptake	132
1. Methodology	132
2. Localization	133
3. Regulation	134
4. Function	135
V. Intestinal cholesterol esterification	136
1. Acyl-CoA: cholesterol acyltransferase (ACAT)	136
a. Methodology, 136 — b. Localization, 137 — c. Regulation, 138 — d. Function, 139 —	
2. Cholesterol esterase of pancreatic origin	140
a. Methodology, 140 — b. Localization, 140 — c. Regulation, 140 — d. Function, 140	
VI. Origin of the cholesterol in intestinal lymph	141
1. Total cholesterol mass	141
2. Newly synthesized cholesterol	142
VII. Compartmentalization of cholesterol in the enterocyte	144
Acknowledgements	146
References	146

Chapter 6

Cholesterol and biomembrane structures

D. Chapman, Mary T.C. Kramers and C.J. Restall (London)	151
I. Introduction	151
II. The occurrence of sterols	151
III. Cholesterol-phospholipid interactions	152
IV. The effects of cholesterol upon membrane proteins	159
V. The effects of cholesterol on cellular functions	161
VI. Cholesterol exchange	162
VII. The experimental manipulation of cholesterol	163
VIII. Cholesterol and disease	164
1. Liver disease	164
2. Familial hypercholesterolaemia	164
3. Ageing and atherosclerosis	165
4. Muscular dystrophy	166
5. Malaria	166
6. Cholesterol and cancer	166
IX. Cholesterol evolution	168
X. Conclusions	169
Acknowledgements	170
References	170

Chapter 7

Biosynthesis of plant sterols

T.W. Goodwin (Liverpool)	175
I. Introduction	175
II. Formation of cycloartenol	175
III. Alkylation reactions	178

IV.	Steps other than those involving methylation	184
	1. Demethylation	184
	2. Isomerization of $\Delta^8 \rightarrow \Delta^5$	187
	3. Insertion of the Δ^{22} double bond	188
V.	Cholesterol	189
VI.	Steroid hormones	190
VII.	Cardiac glycosides	190
VIII.	Sapogenins	192
IX.	Ecdysteroids	192
X.	Steroid alkaloids	193
XI.	Withanolides	194
XII.	Brassinosteroids	194
XIII.	Sterol esters	196
XIV.	Sterol glycosides and acylglycosides	196
XV.	Function of sterols	196
	1. In membranes	196
	2. As hormones	197
	References	198

Chapter 8

Structures, biosynthesis and function of sterols in invertebrates

	Nobuo Ikekawa (Tokyo)	199
I.	Sterols in marine invertebrates	199
	1. Introduction	199
	2. Sterols in Porifera (sponges)	201
	3. Sterols in Coelenterata	204
	4. Sterols in Echinodermata (starfish)	207
	5. Sterols in crustaceans	209
	6. Sterols in Mollusca and others	210
	7. Side chain modification of sterols in marine invertebrates	212
II.	Sterol metabolism in insects	213
	1. Dealkylation of phytosterol	213
	2. Inhibitors of phytosterol metabolism	217
	3. Structure requirement of sterol for growth and development	219
III.	Ecdysteroids in insects	219
	1. Introduction	219
	2. Ecdysteroids isolated from insects and their biosynthesis	220
	3. Ecdysone metabolism and biological activity	222
	Acknowledgements	225
	References	225

Chapter 9

Mechanism of bile acid biosynthesis in mammalian liver

	Ingemar Björkhem (Stockholm)	231
I.	Introduction	231
II.	Formulation of the sequence of reactions in the biosynthesis of bile acids	233
III.	Cholesterol 7α -hydroxylase	237
	1. Assay of cholesterol 7α -hydroxylase in liver microsomes	237
	2. Substrate specificity and physiological substrate for cholesterol 7α -hydroxylase	239

3. Mechanism of 7 α -hydroxylation of cholesterol and experiments with purified enzyme components	240
IV. Conversion of 7 α -hydroxycholesterol into 7 α -hydroxy-4-cholesten-3-one	244
V. 12 α -Hydroxylation	245
VI. Saturation of the Δ^4 double bond	246
VII. Reduction of the 3-oxo group	247
VIII. 26-Hydroxylation	247
1. Microsomal 26-hydroxylation	248
2. Mitochondrial 26-hydroxylation	249
IX. Conversion of 5 β -cholestane-3 α ,7 α ,12 α ,26-tetrol into 3 α ,7 α ,12 α -trihydroxy-5 β -cholestanoic acid	251
X. Conversion of 3 α ,7 α ,12 α -trihydroxy-5 β -cholestanoic acid into cholic acid	252
XI. Conjugation of the carboxylic group	253
XII. Formation of allo bile acids in the liver	255
1. Conversion of 5 β -bile acids to allo bile acids	255
2. Conversion of cholestanol into allo bile acids	255
3. Conversion of 7 α -hydroxy-4-cholesten-3-one into allo bile acids	257
XIII. Species differences and alternative pathways in the biosynthesis of bile acids	257
XIV. Inborn errors of metabolism in bile acid biosynthesis	261
1. Cerebrotendinous xanthomatosis	261
2. Zellweger's disease	263
XV. Regulation of the overall biosynthesis of bile acids	264
1. Feedback regulation of bile acid biosynthesis	264
2. Relation between cholesterol 7 α -hydroxylase and HMG-CoA reductase	266
3. Possible mechanisms for regulation of cholesterol 7 α -hydroxylase activity	268
XVI. Regulation of the ratio between cholic acid and chenodeoxycholic acid	270
Acknowledgements	272
References	272

Chapter 10

Bile alcohols and primitive bile acids

Takahiko Hoshita (Hiroshima)	279
I. Introduction	279
II. Occurrence and structure of bile alcohols in lower vertebrates	279
III. Occurrence and structure of primitive bile acids in lower vertebrates	285
IV. Occurrence and structure of bile alcohols in mammals	289
V. Occurrence and structure of primitive bile acids in mammals	291
VI. Metabolism of bile alcohols and primitive bile acids in mammals	293
VII. Metabolism of bile alcohols and primitive bile acids in lower vertebrates	296
References	299

Chapter 11

Metabolism of bile acids in liver and extrahepatic tissues

William H. Elliott (St. Louis)	303
I. Introduction	303
1. Enterohepatic circulation	303
2. Subcellular location	304
3. Transport and hepatocytes	306

II.	Conjugation	306
1.	Amino acids and proteins	306
a.	Preparation and analyses of CoA derivatives, 307 — b. Bile acid : CoA synthetase (bile acid CoA ligase) and bile acid CoA : glycine/taurine- <i>N</i> -acyltransferase, 307 — c. Metabolism, 308 —	
2.	Sulfates	309
3.	Glucuronides	310
III.	Hydroxylation of the steroid nucleus	310
1.	3 α -Hydroxylation	311
2.	6 β - and 6 α -hydroxylation	311
3.	7 α - and 7 β -hydroxylation	313
4.	12 α -Hydroxylation	315
5.	16 α -Hydroxylation	315
IV.	Hydroxylation in the side chain	316
V.	Oxidoreduction	317
VI.	Extrahepatic studies	320
1.	Brain	320
2.	Cecum	320
3.	Urine	321
4.	Meconium	324
	Acknowledgement	324
	References	325

Chapter 12

Metabolism of bile acids in intestinal microflora

Phillip B. Hylemon (Richmond)

331

I.	Introduction	331
II.	Composition of intestinal microflora	332
III.	Deconjugation	333
IV.	Desulfation	334
V.	Epimerization of hydroxyl groups	334
1.	3 α - and 3 β -hydroxysteroid dehydrogenase	335
2.	6 α - and 6 β -hydroxysteroid dehydrogenase	335
3.	7 α -Hydroxysteroid dehydrogenase	336
4.	7 β -Hydroxysteroid dehydrogenase	336
5.	12 α -Hydroxysteroid dehydrogenase	337
VI.	7 α - and 7 β -dehydroxylase	338
	Acknowledgement	341
	References	342

Chapter 13

Physical-chemical properties of bile acids and their salts

Martin C. Carey (Boston)

I.	Introduction	345
II.	Molecular structures	345
1.	Chemistry	345
2.	Hydrophilic-hydrophobic balance	348
3.	Miscellaneous physical constants	349
III.	Crystalline structures	352
1.	Bile acids and their derivatives	352

2. Bile salt hydrates	352
3. "Choleic acids"	358
IV. Surface physical chemistry	359
1. Bile acids	359
2. Bile salts	360
3. Mixed monolayers	362
V. Bulk aqueous physical chemistry	364
1. pH-solubility relations	365
2. Bile acids — solubility behavior	369
3. Temperature-solubility relations	370
VI. Micelle formation in aqueous solvents	372
1. Critical micellar concentrations	372
a. Methods of determining bile salt CMC values, 372 — b. Influence of variation in physical-chemical conditions, 372 — c. Inventory of published data, 373 —	
2. Micellar size and polydispersity	373
a. Unconjugated bile salts, 374 — b. Glycine-conjugated bile salts, 374 — c. Taurine-conjugated bile salts, 375 — d. Polydispersity, 375 —	
3. Micellar shape and hydration	375
4. Micellar structures	377
5. Micellar charge and counterion binding	378
6. Rates of exchange of micellar and intermicellar components	379
7. Critical and non-critical self-association	379
VII. Reverse micelle formation in non-aqueous media	382
1. Bile acid esters	382
2. Bile acids and salts	383
3. Bile salts within the hydrophobic domains of liposomes and membranes	384
VIII. Mixed micelle formation	388
1. Bile salt-hydrocarbon micelles	388
2. Bile salt-insoluble amphiphile micelles	389
3. Bile salt-swelling amphiphile micelles	390
4. Bile salt-soluble amphiphile micelles	393
5. Bile salt-swelling amphiphile-insoluble amphiphile micelles	394
6. Mixed micelle-unilamellar vesicle transition	395
7. Native bile and intestinal content	396
Acknowledgements	397
References	397

Chapter 14

Roles of bile acids in intestinal lipid digestion and absorption

B. Borgström, J.A. Barrowman and M. Lindström (Lund).	405
I. Introduction	405
1. Historical remarks	405
2. Brief outline of intestinal lipid digestion and absorption	405
II. Roles of bile salts in the intestinal lumen	406
1. What is the physical state of the lipids in the intestinal contents?	406
2. Bile salts are bad emulsifiers!	407
3. What is the importance of bile salts for the function of the lipolytic enzymes?	407
4. What is the composition of the luminal contents after a fat meal?	409
III. Roles of bile salts in transport of lipolytic products from lumen of cytosol through mucosal diffusion barriers and plasma membrane	410
1. Methods employed in the study of lipid absorption	410

2. Which are the barriers for lipid transport from lumen to cytosol?	411
3. What factors determine the rate of transport across the intestinal diffusion barriers?	413
4. What is the role of micellar solubilization for intestinal lipid absorption?	414
5. Absorption of lipids from non-micellar phases	416
IV. Roles of bile salts in intracellular events in lipid absorption	417
V. Roles of bile salts in the absorption of specific lipid classes	419
1. Triglycerides	419
2. Phospholipids	419
3. Cholesterol	419
4. Fat-soluble vitamins	420
5. Other nonpolar compounds	421
VI. Are bile salts necessary for lipid absorption?	421
References	422
<i>Subject Index</i>	427
