

CONTENTS

	PAGE
Preface	V
<small>CHAPTER</small>	
I. INTRODUCTORY	
The Prediction of Engine Performance	1
Altitude Test Plant	2
Calibration of the Merlin Engine	7
Test Programme	8
II. THE CHARGE WEIGHT LAW	
The Cylinder Mass Flow	17
The Temperature Function	21
Formulae for B.H.P.	29
Supercharger Horse-power	30
Pumping Horse-power	31
Friction Horse-power	35
III. THE SUPERCHARGER	
Supercharger Relationships	39
Correcting the Supercharger Pressure Ratio in the Maker's Rating Test	50
IV. ALTITUDE PERFORMANCE	
Summary of Relationships	54
Air Consumption, Fuel Consumption, and Mixture Strength	56
Effect of Supercharger Gear Change on Fuel Con- sumption	58
Reduction of Flight Data	60
V. APPLICATION TO THE MERLIN ENGINE	
The Charge Weight Equation	64
Charge Weight and I.H.P.	71
Pumping Losses	76
Friction Horse-power Formula	78
Supercharger Pressure Ratio	81
VI. ALLOWANCE FOR INTAKE AND EXHAUST EFFECTS	
The Air Intake Equations	94
Exhaust Thrust	95

CHAPTER

VII. TWO-STROKE ENGINE PERFORMANCE ANALYSIS

	PAGE
Air Consumption of the Two-stroke Aero-engine	102
Power Developed by the Two-stroke	108
Fuel Consumption of the Two-stroke	110
Exhaust Thrust of the Two-stroke	111

VIII. THE COMPOUND ENGINES

Forms of Compound Engine	113
The Geared-in Turbine Engine	115
Compound Unit with Free Turbine: Power only taken from Piston Unit Shaft	120
Compound Engine with Propeller Power taken from both Piston and Turbine Units	128
Application to Long-range Aircraft	132
References	135
Appendix: List of Symbols	137
Index	141
