CHAPTER I

Introduction to the Devices

1.1. Classification, p. 1. **1.2.** Special devices, p. 6.

CHAPTER II

The Phenomena of Ionization

2.1. Specific ionization, p. 7. **2.2.** The range-energy relation, p. 11. **2.3.** Comparison of proton and α -particle ranges, p. 14. **2.4.** Other heavy-particle relations, p. 15. **2.5.** The Bragg curve, p. 16. **2.6.** Range-energy relation for electrons, p. 16. **2.7.** Energy measurement by total absorption, p. 19. **2.8.** Straggling, p. 21. **2.9.** Range straggling, p. 22. **2.10.** Ionization straggling, p. 24. **2.11.** Comparison of range and energy straggling, p. 24. **2.12.** Absorption in various materials, p. 25.

CHAPTER III

Phenomena Governing the Behaviour of Counters

3.1. Introduction, p. 27. **3.2.** Heavy-ion mobility, p. 27. **3.3.** Electron mobility, p. 31. **3.4.** The velocity of spark breakdown, p. 35. **3.5.** Diffusion effects, p. 36. **3.6.** Electron capture, p. 39. **3.7.** Loss of electrons by heavy negative ions, p. 43. **3.8.** Charge exchange, p. 43. **3.9.** The impact of positive ions on metal surfaces, p. 44. **3.10.** Metastable states, p. 45. **3.11.** Photon effects, p. 45. **3.12.** Multiplication, p. 45. **3.13.** Corona, p. 49. **3.14.** Ionization by positive ions, p. 49. **3.15.** Recombination, p. 50. **3.16.** Volume recombination, p. 51. **3.17.** Columnar recombination, p. 53. **3.18.** Preferential recombination, p. 55. **3.19.** Summary of remarks on recombination, p. 57.

CHAPTER IV

The Electrostatics of Pulse Formation

4.1. The nature of the problem, p. 59. **4.2.** The mechanism of pulse formation—Green's theorem, p. 59. **4.3.** Fast and slow chambers, p. 63. **4.4.** The pulse shape in a parallel-plate chamber, p. 65. **4.5.** Distribution of total pulse sizes, p. 70. **4.6.** α -Particle source, p. 71. **4.7.** Uniform track distribution, p. 72. **4.8.** Neutron irradiation of the parallel-plate chamber, p. 72. **4.9.** Gridded chambers, p. 74. **4.10.** The pulse shape in a coaxial cylinder chamber, p. 77. **4.11.** Distribution of pulse sizes, p. 83. **4.12.** Uniform track distribution, p. 84. **4.13.** Neutron irradiation of the coaxial cylinder chamber, p. 87. **4.14.** Proportional and Geiger counters, p. 89. **4.15.** Distribution of pulse size, p. 90. **4.16.** The shape of the pulse, p. 90. **4.17.** Effect of differentiation on the pulses, p. 92. **4.18.** Pulse differentiation in the parallel-plate chamber, p. 94. **4.19.** Pulse differentiation in the coaxial

cylinder ionization chamber, p. 96. 4.20. Pulse differentiation in proportional and Geiger counters, p. 98. 4.21. Differentiation of $(1 - e^{-\tau s})$, p. 101. 4.22. Remark on differentiation, p. 101. 4.23. The dependence of relative output-pulse height on pulse rising time, p. 103.

CHAPTER V

The Ionization Chamber

5.1. Current chambers, p. 105. 5.2. Current chamber geometry, p. 107. 5.3. Contamination, p. 108. 5.4. Screening, p. 109. 5.5. Space-charge effects, p. 109. 5.6. Pulse chambers, p. 110. 5.7. Slow chambers, p. 110. 5.8. Insulators in slow chambers, p. 112. 5.9. Grid outer electrodes, p. 113. 5.10. Corona and breakdowns, p. 113. 5.11. Fields in slow chambers, p. 116. 5.12. Fast ionization chambers, p. 117. 5.13. Insulators in fast chambers, p. 117. 5.14. Application of h.t. to fast chambers, p. 118. 5.15. Fast positive pulses, p. 120. 5.16. Screening, p. 121. 5.17. Pulse-chamber geometry, p. 121. 5.18. Guard rings, p. 122. 5.19. The speed of ionization chambers, p. 124. 5.20. Control of the speed of an ionization chamber, p. 127. 5.21. Particle group analysis, p. 128. 5.22. Fast-neutron work, p. 132. 5.23. Neutron spectra, p. 132. 5.24. Neutron-flux measurements, p. 133. 5.25. Homogeneous ionization chamber, p. 133. 5.26. Thick film chamber, p. 134. 5.27. Coaxial cylinder chamber, p. 136. 5.28. Use of gases other than hydrogen, p. 138. 5.29. Background counts in neutron chambers, p. 138. 5.30. The neutron-proton scattering cross-section, p. 139. 5.31. BF_3 chambers, p. 140. 5.32. Fission chambers, p. 141. 5.33. Effect of valve noise on $p(E)$, p. 141.

CHAPTER VI

The Proportional Counter

6.1. The use of the device, straggling, p. 143. 6.2. Factors governing the gas amplification A , p. 146. 6.3. The stability of the device, p. 149. 6.4. Some factors governing the choice of a counter gas, p. 152. 6.5. Dependence of A on counter geometry, p. 154. 6.6. Dependence of A on gas purity for different track orientations, p. 157. 6.7. Precautions necessary for a constant A value, p. 157. 6.8. A values achieved, and some special uses, p. 157. 6.9. Proportional counters in coincidence arrangements, p. 160. 6.10. The speed of counting attainable, p. 162. 6.11. Some principles of proportional counter construction, p. 165. 6.12. Insulators in proportional counters, p. 166. 6.13. Wire supports, p. 167. 6.14. The use of the proportional counter in fast-neutron work, p. 168.

CHAPTER VII

The Geiger Counter

7.1. Introduction, p. 170. 7.2. The space charge sheath, p. 170. 7.3. The various types of counter, p. 171. 7.4. The mechanism of avalanche breeding, p. 174. 7.5. The relation between $N(I)$ and counter voltage, p. 177. 7.6. Dependence of V_s on counter variables, p. 178. 7.7. Some characteristics of the space-charge sheath, p. 181. 7.8. The charge developed in the counter, p. 182. 7.9. The propagation of the discharge down the counter wire, p. 187. 7.10. Some additional magnitudes of the discharge, p. 193. 7.11. Statistical fluctuations in the discharge, p. 193. 7.12. The motion of the ion sheath,

p. 202. **7.13.** The dead time and recovery time, p. 206. **7.14.** The dependence of t_{D0} on counter variables, p. 211. **7.15.** The dependence of dead time on counting rate, p. 212. **7.16.** Measurement of dead time, p. 215. **7.17.** Electronic reduction of the dead time, p. 216. **7.18.** The size of the Geiger pulse, p. 216. **7.19.** Geiger counter speed in coincidence arrangements, p. 217. **7.20.** Efficiency, p. 221. **7.21.** Sensitive volume, p. 222. **7.22.** Quantitativity, p. 224. **7.23.** Spurious effects and the plateau, p. 225. **7.24.** Data on the plateau, p. 233. **7.25.** The counter gas and quenching agents, p. 237. **7.26.** The photoelectric effect, p. 237. **7.27.** The background or natural effect, p. 238. **7.28.** The continuous discharge, p. 239. **7.29.** The life of a counter, p. 240. **7.30.** Constructional details, p. 241. **7.31.** The Maze counter, p. 243. **7.32.** Special counters, p. 244. **7.33.** The beaded counter, p. 244. **7.34.** Gridded Geiger counters, p. 246.

CHAPTER VIII

Speed and Statistics

8.1. The random sequence, p. 247. **8.2.** Counting losses, p. 248. **8.3.** The build-up of pulses, p. 250. **8.4.** The statistics of current chambers, p. 255.
