

Contents

1. INTRODUCTION TO CHEMICAL HIGH VACUUM TECHNIQUE 1
2. MATERIALS OF CONSTRUCTION AND OPERATION 3
Pyrex glass: chemical and thermal properties; strength. Mercury: physical and chemical properties; toxicity of mercury vapor; collecting spilled mercury; purification. Stopcock lubricant. Vacuum wax.
3. GLASS BLOWING 14
Equipment. Making apparatus from glass: cutting tubing; manipulating glass in a flame; annealing; bending tubing; making closed ends; end-to-end seals; T-seals; ring seals; bends and seals in place; closed circuits; sealing off apparatus in vacuo; clamping interconnected apparatus.
4. PRODUCING A HIGH VACUUM 30
General principles. Vacuum pumps: diffusion pumps; mechanical fore pumps; pump connections; location of pumps. Evacuating the apparatus. Locating leaks. Nature of the vacuum produced.
5. MEASURING PRESSURE 43
Low pressure. Ordinary pressure.
6. LOW TEMPERATURES 48
Producing low temperatures: liquid nitrogen; solid carbon dioxide; liquid ammonia; cooling baths. Measuring low temperatures: liquid-in-glass thermometers; vapor pressure thermometers; thermocouples.
7. VALVES 62
Stopcocks. Mercury float valves. Mercury reservoirs.

8. INTRODUCING INTO AND REMOVING FROM VACUUM SYSTEM	66
Transfer tubes and tube opener. Weighing tubes. Introducing nonvolatile materials. Removing materials for discarding.	
9. MEASURING VOLUME	72
Noncondensable gas. Condensable gas: volumes at room temperature; volumes above room temperature.	
10. MEASURING VAPOR PRESSURE	82
Below room temperature. Above room temperature. Vapor pressures of pure compounds.	
11. CONDENSATION TRAPS AND FRACTIONATION	86
Principles of condensation. Design of traps. Fractionation procedures: binary mixtures; polycomponent mixtures; criterion of purity. Completeness of condensation.	
12. MISCELLANEOUS SUGGESTIONS AND METHODS	94
Molecular weights and vapor densities. Determining melting point. Reactions at pressures greater than 1 atmosphere. Drying liquid ammonia. Preparation of weighed samples of sodium. Introducing weighed sodium to the vacuum line. Hydrolysis of metal hydrides and organometallic compounds. Oxidation.	
13. PRACTICE IN HIGH VACUUM TECHNIQUE	104
14. A GENERAL UTILITY HIGH VACUUM APPARATUS	110
15. FUTURE DEVELOPMENTS	115
