	PAGE
<b>Chapter 1. Introduction</b>	
1.1 Use of Mathematics	1
1.2 Nuclear Atom	1
1.3 Quantum Theory	2
1.4 Quantum Mechanics	3
1.5 Uncertainty Principle	4
1.6 Correspondence Principle	5
<b>Chapter 2. The Hydrogen Atom</b>	
2.1 The Fundamental State	7
2.2 First Excited State	8
2.3 Degenerate States. Superposition of Wave Functions	9
2.4 Orthogonality	9
2.5 Necessary and Accidental Degeneracy	10
2.6 The $p$ State	11
2.7 Higher Excited States	11
2.8 The Angular Momentum	12
2.9 Graphical Representations of H States	13
2.10 Time-Dependent Wave Function	16
2.11 Superposition of Time-Dependent Functions	17
<b>Chapter 3. The Periodic System</b>	
3.1 Electrons of the $K$ Shell	20
3.2 Pauli Principle	21
3.3 Electronic Structure of the Lighter Elements	22
3.4 Electrons of the $L$ to $Q$ Shells	23
3.5 Interaction of Electrons in Approaching Atoms	27
3.6 Heteropolar Bond	28
3.7 Transition Elements	30
3.8 Independent Motion of Electrons in Wave Mechanics	33
3.9 The Electron Spin	34
3.10 Generalized Pauli Principle	35
<b>Chapter 4. Motion and Position of Nuclei in Molecules</b>	
4.1 Separation of Motions of Nuclei and Electrons	37
4.2 Classical Motion of the Nuclei	38
4.3 Nuclear Vibrations	39
4.4 The Isotope Effect	39
4.5 Nuclear Positions	40
<b>Chapter 5. Atoms and Molecules in Electric Fields</b>	
5.1 Atomic Fields and Macroscopic Fields	44
5.2 Atoms in Homogeneous Fields	44
5.3 Permanent Dipoles	45

	PAGE
5.4 Orientation of Dipoles in an Outside Field	47
5.5 Dielectric Media	48
5.6 Measurement of Dielectric Constants	51
5.7 Determination of Dipole Moments	52
5.8 Values of Dipole Moments	55
5.9 Vector Additivity of Dipoles	56
5.10 Electronic Polarizability	57
5.11 Anisotropic Polarizability	59
 <b>Chapter 6. Van der Waals Attraction Forces</b>	
6.1 Van der Waals Forces	63
6.2 Interaction between Molecules Due to Dipoles and Polarizabilities	63
6.3 Dipole-Dipole Interaction	64
6.4 Effect of Temperature	64
6.5 Polarizability-Polarizability Interaction	65
6.6 Dipole-Polarizability Interaction	66
6.7 Interaction at Small Distances	67
6.8 Ion Interactions	68
 <b>Chapter 7. The Chemical Bond</b>	
7.1 Necessary Approximations	71
7.2 The Atomic-Function Method	71
7.3 Van der Waals Repulsion	72
7.4 Attraction in the Heitler-London Model	74
7.5 $H + H_2$ Reaction	75
7.6 Molecular-Orbital Method	76
7.7 The Tunnel Effect. Greater Nuclear Separation	78
7.8 Molecular-Orbital Functions for the $H_2^+$ Ion	80
7.9 Energy Difference and Time in the Tunnel Effect	82
7.10 Hydrogen Molecule	84
7.11 $He_2^+$	85
7.12 The $He_2$ Molecule	86
7.13 $Li_2$ and $Be_2$	86
7.14 Molecular Orbits Obtained from $p$ Electrons	87
7.15 B, C, N, O, F, Ne	88
7.16 Diatomic Molecules with Different Atoms	89
7.17 Polyatomic Molecules	91
7.18 The Valence-Orbital Method	91
7.19 Directed Valence in $H_2O$ and $NH_3$	92
7.20 Hybridized Functions	94
7.21 Valence Orbits in Double and Triple Bonds	100
7.22 Combined Valence-Orbital and Molecular-Orbital Method	104
7.23 Electron Mobility in Conjugated Systems	111
7.24 Resonance	112
7.25 Resonance Description of Conjugated Systems	116
7.26 Binding by Electron Holes	122
 <b>Chapter 8. Forces in the Solid State</b>	
8.1 Introduction	125
8.2 Forces Acting within Solids	126

## CONTENTS

xi

PAGE

8.3	Vapor Pressures and Melting Points of Solids	127
8.4	Sheetlike Structures	128
8.5	Threadlike Structures	129
8.6	Van der Waals Solids	130
8.7	Dipole Structures, the Hydroxyl Bond and the Hydrogen Bond	134
8.8	Ionic Crystals	137
8.9	Ionic Complexes	142
8.10	Homopolar Crystals	146
8.11	The Metals	147
8.12	Conductivity by Electrons, the Tolman Effect	149
8.13	Free Motion of Electrons	149
8.14	Motion of an Electron in a Weak Periodic Field	151
8.15	Electron States in Strong Periodic Fields	154
8.16	Motion of an Electron in a Strong Periodic Field	159
8.17	Motion of Electrons in a Two- or Three-Dimensional Lattice	162
8.18	Metals and Insulators	166
8.19	Electron Conductivity of Heat	167
8.20	Electric Conductivity in Metals	168
8.21	Semiconductors, Photoelectric Conductivity, and Electric Breakdown	170
8.22	Chemical Binding in Metals and Insulators	172
8.23	Resonance in Metallic Conductors	176
8.24	Alloys	178
8.25	Interstitial Structures	179
8.26	Chemical Processes on Surfaces	180
<b>Chapter 9. Magnetic Properties of Matter</b>		
9.1	Effects of a Magnetic Field	182
9.2	The Magnetic Moment	183
9.3	Temperature-Dependent Paramagnetism	185
9.4	Magnetism and the Production of Low Temperatures	187
9.5	Ferromagnetism	188
9.6	Temperature-Independent Paramagnetism and Diamagnetism	190
<b>Chapter 10. Molecular Vibrations</b>		
10.1	Introduction	193
10.2	Molecular Vibrations	193
10.3	Symmetry of Normal Vibrations	195
10.4	Molecular Rotation	199
10.5	The Infrared Spectrum	200
10.6	Selection Rules	201
10.7	The Pure Rotational Spectrum	202
10.8	Vibrations in the Infrared Spectrum	205
10.9	The Vibration-Rotation Spectrum	206
10.10	Valence and Deformation Vibrations	209
10.11	Effects of Anharmonicity	211
10.12	Infrared Spectra in Solids, Liquids, and Solutions	216
10.13	Scattering of Light	220
10.14	The Raman Effect	221
10.15	The Vibrational Raman Spectrum	224

	PAGE
10.16 The Isotope Effect	228
10.17 The Vibrational Specific Heat	228
<b>Chapter 11. Electronic Spectra</b>	
11.1 Atomic Spectra	231
11.2 Symmetry Properties of Atomic States	231
11.3 Atomic Models	235
11.4 The Influence of Spin	238
11.5 Approximate Selection Rules	241
11.6 The Zeeman Effect	242
11.7 Electronic States in Diatomic Molecules	244
11.8 Co-ordination Schemes	247
11.9 Selection Rules in Diatomic Molecules	253
11.10 Vibrational Structure of Electronic Transitions	254
11.11 Dissociation Energies	257
11.12 The Rotational Structure in Diatomic Molecules	262
11.13 Electronic Spectra of Polyatomic Molecules	265
11.14 Symmetry of Electronic Functions and Selection Rules	266
11.15 Stability of Symmetrical Polyatomic Molecules	267
11.16 Vibrational Selection Rules	270
11.17 Color and Resonance	272
11.18 Predissociation, Radiationless Transitions	278
11.19 Electronic Excitation of a Crystal Lattice	287
11.20 Interaction of Lattice Excitation and Vibration	289
11.21 Photoconductivity, Phosphorescence	291
11.22 Spectra of Conductors	293
<b>Chapter 12. Nuclear Chemistry</b>	
12.1 Size of Atomic Nuclei	296
12.2 The Neutron	298
12.3 Constituents of Atomic Nuclei	299
12.4 Spin and Statistics, Para- and Ortho-Hydrogen	300
12.5 Beta Radioactivity	305
12.6 The Neutrino Hypothesis	307
12.7 Energy-Period Relation in the Beta Decay	308
12.8 Nuclear Stability	312
12.9 The Influence of Coulomb Forces, the End of the Periodic System	315
12.10 The Alpha-Particle Model, Binding Energies in Nuclei	316
12.11 Alpha Radioactivity	317
12.12 Nuclear Fission	319
12.13 Alpha-Particle Reactions	320
12.14 Artificial Sources	321
12.15 Penetration Factor in Nuclear Reactions	322
12.16 Reactions with Accelerated Particles	323
12.17 Nuclear Resonance, the Compound Nucleus	324
12.18 Production of Neutrons	325
12.19 Fast Neutron Reactions	329
12.20 Radiative Capture, Slow-Neutron Reactions	330
12.21 Nuclear Isomers	332

## CONTENTS

xiii  
PAGE

12.22	Chemical Changes during Nuclear Reactions	333
12.23	Nuclear Forces	335
<b>Chapter 13. State of Matter in Stars</b>		
13.1	Composition and Appearance of Stars	337
13.2	Interior of the Stars	338
13.3	Energy Production in the Stars	341
13.4	Instability in Stars	344
13.5	The Expanding Universe	346
13.6	Origin of Elements	347
<b>Index</b>		<b>357</b>
