

	SUMMARY	8
	INTRODUCTION	10
1	STRUT-BASED FUNICULAR STRUCTURES	24
1.1	Spatial Concrete Column	26
1.2	Columns, Topology, Volume, Load Path	40
1.3	Saltatur: Composite Funicular Structure For Reassembly	46
1.4	Hedracrete: Self-Supporting Funicular Branching Concrete	68
1.5	Compression-Only Floors Spanning Columns	80
1.6	Prototyping 3D-Printed Compression-Dominant Funicular Floors Using Scaled Fabrication Models	88
1.7	Litekit House with Prefab Structure	96
1.8	Designing Airplane Wing Structures Using 2D Funicular Networks	108
2	FACE-BASED FUNICULAR STRUCTURES	118
2.1	Hollow Glass Unit Bridge; Vitrum Leve	120
2.2	Multi-Layer Sheet-Based Lightweight Funicular Structures	146
2.3	Shellular Structures and Applications in Micro- and Macro-Scale Systems	154
2.4	Shellular Polyhedral Materials	162
2.5	Bio-Based Composite Spatial Shell Structures	172
2.6	Biomaterial Composite Design and Shellular Structures Development for Augmented Earthen Construction	180
2.7	Self-Healing of Fractured Shellular Metal Structures	188
2.8	Origami and Polyhedral Systems	194
3	HYBRID FUNICULAR SYSTEMS	204
3.1	Diamanti: 3D-Printed, Post-Tensioned Concrete Canopy	206
3.2	3D-Printed Carbon-Absorbing High-Performance Building Structure	226
3.2.1	Design Innovation	230
3.3	Prototyping	234
3.4	Application of Graphic Statics and Strut-and-Tie Models in Designing Innovative Timber Structures	238
3.5	Multi-Material 3D-Printing	248
3.6	Dove Wave	258
4	THE GENERATIVE POWER OF RECIPROCAL POLYHEDRONS	264
4.1	Future Airport Structure Typologies	266
4.2	Mass Timber Studio	284
4.3	Florrisant Fossil Beds National Park Lightweight Timber Structure	312
