<b>Part I Philosophical Foundations</b>	<b>1</b>
<b>1 Empiricism, History, and Psychological Applications of Neuroscience</b>	<b>3</b>
1.0 Introduction	3
1.1 Psychology without Neuroscience	4
1.1.1 Empirical Phenomena in Psychology	4
1.1.1.1 External Phenomena	4
1.1.1.2 Internal Phenomena	5
1.1.2 Empirical Applications and Theoretical Statements in Psychology	6
1.1.2.1 Changing Behavior	7
1.1.2.2 Predicting Future Behavior	8
1.1.2.3 Inferring Mental States	10
1.2 Biological Psychology	13
1.2.1 Empirical Phenomena in Neuroscience	13
1.2.1.1 Components of the Nervous System	13
1.2.1.2 Relationships between Biology and Behavior	14
1.2.2 Empirical Applications of Neuroscience	15
1.2.2.1 Changing Behavior	16
1.2.2.2 Predicting Future Behavior	18
1.2.2.3 Inferring Mental States	21
1.2.3 Theoretical Statements in Biological Psychology	24
1.2.3.1 Logic	24
1.2.3.2 A History of Interpreting Data in Biopsychology	26
1.3 Conclusion	28
<b>2 Study Design, Statistics, and Open Science</b>	<b>35</b>
2.0 Introduction	35
2.1 Study Design	36
2.1.1 Internal Validity: Proving Cause and Effect	36
2.1.1.1 Interventions	37
2.1.1.2 Control Conditions	38
2.1.1.3 Random Assignment	38

2.1.1.4	Large Samples	38
2.1.1.5	Blinding	39
2.1.2	Understanding Multivariate Systems	40
2.1.2.1	Experiments in Complex Systems	40
2.1.2.2	Using Artificial Intelligence with Observational Designs	41
2.1.2.3	Reducing Complexity with Single-Subject Designs	42
2.1.3	External Validity: Generalizing Outside a Study	43
2.1.3.1	Variation between Subjects	43
2.1.3.2	Variation between Species	44
2.1.3.3	Variation between Laboratory Paradigms and the Real World	46
2.2	Statistics	47
2.2.1	Describing a Sample	48
2.2.1.1	Quantifying Group Differences	48
2.2.1.2	Quantifying Consistency of Association	50
2.2.1.3	Predicting Outcomes	50
2.2.2	Making Inferences About Populations	51
2.2.2.1	Confidence Intervals	52
2.2.2.2	Evaluating the Truth Value of Null Hypotheses	53
2.3	Ethics, Credibility, Transparency, and Openness	54
2.3.1	Creating, Publishing, and Discovering Credible Science	56
2.3.1.1	Blinding Research Personnel	56
2.3.1.2	Preregistration	56
2.3.1.3	Open Data	57
2.3.1.4	Replication, Systematic Reviews, and Meta-Analyses	57
2.3.1.5	Publishing Negative Results	58
2.4	Conclusion	59
<b>Part II Biological and Technological Foundations</b>		65
<b>3</b>	<b>Genetics and Cell Biology</b>	67
3.0	Introduction	67
3.1	Genetics and Molecular Biology	68
3.1.1	Foundations of Gene Expression	70
3.1.1.1	Nucleic Acids	70
3.1.1.2	Proteins	71
3.1.2	Variations in Gene Expression	73
3.1.2.1	Specializing for Neurotransmitter Production	73
3.1.2.2	Responding to External Stimuli	74
3.1.2.3	Inheriting Gene Expression Patterns	74
3.2	Cellular Anatomy	77
3.2.1	Morphology	78

3.2.2	Connectivity	80
3.2.2.1	Types of Connectivity	80
3.2.2.2	Methods for Studying Connectivity	81
3.3	Conclusion	82
<b>4</b>	<b>Neuronal Communication and Plasticity</b>	<b>88</b>
4.0	Introduction	88
4.1	Electrophysiology and Neurotransmission	89
4.1.1	Standard Model of Neuronal Electrophysiology	89
4.1.1.1	Postsynaptic Potentials	90
4.1.1.2	Action Potentials	91
4.1.2	Standard Model of Neurotransmission	96
4.1.2.1	Biosynthesis	96
4.1.2.2	Storage and Release	96
4.1.2.3	Receptor Binding	96
4.1.2.4	Cleanup	97
4.1.3	Variations in Electrophysiology and Neurotransmission	97
4.1.3.1	Excitation and Inhibition	98
4.1.3.2	Synaptic Neuromodulation	98
4.1.3.3	Bulk Neuromodulation	100
4.2	Interactions Outside the Brain	100
4.2.1	Sensing Our Environment	101
4.2.1.1	Sensing External Stimuli	101
4.2.1.2	Detecting Internal Bodily Processes	102
4.2.2	Controlling Behavior and Physiology	103
4.2.2.1	Direct Synapses	103
4.2.2.2	Hormone Control	103
4.3	Plasticity	104
4.3.1	Electrophysiological Mechanisms of Plasticity	105
4.3.1.1	High-Frequency Stimulation	105
4.3.1.2	Spike Time-Dependent Plasticity	105
4.3.2	Molecular Mechanisms of Plasticity	106
4.3.2.1	Postsynaptic Changes	106
4.3.2.2	Presynaptic Changes	107
4.4	Conclusion	107
<b>5</b>	<b>Neurotechnology: Recording and Stimulating the Brain</b>	<b>112</b>
5.0	Introduction	112
5.1	Criteria for Evaluating a Technology's Capabilities	113
5.1.1	Technological Power	114
5.1.1.1	Spatial Resolution	114
5.1.1.2	Temporal Resolution	114
5.1.1.3	Comprehensiveness	115

5.1.1.4	Capacity to Discriminate among Neuron Types	116
5.1.1.5	Capacity to Appreciate Diverse Biological Properties	117
5.1.2	Practical Constraints	118
5.1.2.1	Safety	118
5.1.2.2	Cost	118
5.1.2.3	Freedom of Movement	118
5.2	Genetically Invasive Technology	119
5.2.1	Recording: Calcium Imaging	120
5.2.1.1	Technological Foundations	120
5.2.1.2	Power and Constraints	120
5.2.1.3	Application: Discriminating Neurons by Connectivity	120
5.2.2	Stimulation: Optogenetics	122
5.2.2.1	Technological Foundations	122
5.2.2.2	Power and Constraints	123
5.2.2.3	Application: Discriminating Neurons by Neurotransmitter Production	124
5.3	Noninvasive Technologies	124
5.3.1	Recording: EEG	125
5.3.1.1	Technological Foundations	125
5.3.1.2	Power and Constraints	125
5.3.1.3	Analysis	126
5.3.1.4	Application: Detecting Quickly Evolving Processes	127
5.3.2	Recording: fMRI	127
5.3.2.1	Technological Foundations	128
5.3.2.2	Power and Constraints	128
5.3.2.3	Analysis	129
5.3.2.4	Application: Precise Spatial Mapping	130
5.3.3	Stimulation: Transcranial Electric Stimulation and Transcranial Magnetic Stimulation	131
5.3.3.1	Technological Foundations	131
5.3.3.2	Power and Constraints	132
5.3.3.3	Application: Treating Mental Disorders	132
5.4	Anatomically Invasive Technology: Electrodes	133
5.4.1	Recording Electrodes	133
5.4.1.1	Technological Foundations	133
5.4.1.2	Power, Constraints, and Analysis	133
5.4.1.3	Application: Precise Recording in Natural Environments	135
5.4.2	Stimulating Electrodes	135
5.4.2.1	Technological Foundations	135
5.4.2.2	Interpretation	136
5.4.2.3	Application: Continuous and Precise Stimulation	136
5.5	Conclusion	136

<b>Part III Comparing Psychology with Behavior</b>	<b>141</b>
<b>6 Functional Neuroanatomy</b>	<b>143</b>
6.0 Introduction	143
6.1 Anatomy of the Nervous System	144
6.1.1 Regions of the Brain	144
6.1.1.1 Background: Anatomical Terminology	144
6.1.1.2 Macroscopic Structures	144
6.1.1.3 Microscopic Structures and Cortical Anatomy	147
6.1.2 Pathways between the Brain and Body	149
6.1.2.1 The Spinal Cord	149
6.1.2.2 Cranial Nerves	151
6.1.2.3 Autonomic Nervous System	152
6.2 Functional Neuroanatomy	155
6.2.1 Developing a Motor Prosthetic	156
6.2.1.1 Macroscopic Organization of the Motor Cortex	157
6.2.1.2 Diversity among Neighboring Neurons Within the Motor Cortex	157
6.2.1.3 Coordination with Sensory Regions	158
6.2.2 Developing a Visual Prosthetic	160
6.2.2.1 Macroscopic Organization of the Visual Cortex	160
6.2.2.2 Diversity among Neighboring Neurons Within the Visual Cortex	162
6.2.3 Artificially Reactivating Memories	164
6.2.3.1 Memory Storage Across the Cerebral Cortex	165
6.2.3.2 Localizing Memory Processes in the Hippocampus	166
6.2.3.3 Diversity among Neighboring Neurons Within the Hippocampus	168
6.2.4 Reducing Anxiety	170
6.2.4.1 Localizing Fear in the Amygdala	170
6.2.4.2 Fear and Anxiety Outside the Amygdala	171
6.3 Conclusion	174
<b>7 Psychopharmacology and Neurotransmitter Systems</b>	<b>179</b>
7.0 Introduction	179
7.1 Drugs and Neurotransmitter Systems	180
7.1.1 Studying the Brain-Wide Effects of Neurotransmitters	180
7.1.1.1 Routes of Administration	180
7.1.1.2 Mechanisms of Action	182
7.1.2 Studying the Diversity Within Neurotransmitter Systems	183
7.1.2.1 Receptor-Specific Neurotransmitter Effects	183
7.1.2.2 Region-Specific Neurotransmitter Effects	185

7.2	Social Context of Drug Development and Regulation	187
7.2.1	Medical Treatments	187
7.2.1.1	Authorizing Drug Use for Medical Conditions	187
7.2.1.2	Patents and Financing Clinical Trials	189
7.2.2	Restricting Access to Harmful Drugs	189
7.3	Drugs and Behavior	190
7.3.1	Depression	191
7.3.1.1	SSRIs	192
7.3.1.2	Ketamine	194
7.3.1.3	Classic Psychedelics	196
7.3.2	Anxiety and Trauma	198
7.3.2.1	Benzodiazepines	198
7.3.2.2	Cannabis	199
7.3.2.3	MDMA (Ecstasy)	202
7.3.3	Obesity, Eating Behavior, and Addiction	203
7.3.3.1	GLP-1 Drugs	204
7.3.3.2	Opioids	205
7.3.4	Cognitive Enhancement and Attention Deficit Disorders	206
7.3.4.1	Caffeine	206
7.3.4.2	Stimulants	207
7.3.5	Sleep	208
7.3.5.1	Sedatives	210
7.3.5.2	Melatonin	210
7.4	Conclusion	212
<b>8</b>	<b>Behavioral Genetics</b>	<b>217</b>
8.0	Introduction	217
8.1	Heritability	218
8.1.1	Methods for Determining Heritability	219
8.1.1.1	Family Studies	219
8.1.1.2	Adoption Studies	219
8.1.1.3	Twin Studies	223
8.1.2	Generalizations About the Heritability of Psychological Traits	223
8.1.2.1	Law #1: Most Traits Are Heritable	224
8.1.2.2	Law #2: Shared Environment Is Not Important	224
8.1.2.3	Law #3: Nonshared Environment Is Important	225
8.2	Modern Behavioral Genetics	225
8.2.1	Foundations of Behavioral Genetics	225
8.2.1.1	Types of Genetic Variation	225
8.2.1.2	Technologies and Methods of Analysis	228
8.2.1.3	Data Analysis	229
8.2.2	Applications in Neurology and Mental Health	232
8.2.2.1	Monogenic Neurological Conditions	232

8.2.2.2	Alzheimer's Disease	232
8.2.2.3	Depression	233
8.3	Conclusion	235
<b>Part IV Example Applications of Neuroscience in Psychology</b>		<b>239</b>
<b>9</b>	<b>Reinforcement and Addiction</b>	<b>241</b>
9.0	Introduction	241
9.1	Reinforcement, Dopamine, and Reward Regions	243
9.1.1	Dopamine Biology and Neuroanatomy	243
9.1.1.1	Biochemistry and Signaling	243
9.1.1.2	Regions of Dopamine Synthesis and Release	243
9.1.2	Pleasure Electrodes	246
9.1.2.1	Voluntary Intracranial Self-Stimulation in Animals	246
9.1.2.2	Pleasure Electrodes in Humans	248
9.1.3	Measuring Dopamine during Natural Rewards	250
9.1.3.1	Retrospective Reward Learning	250
9.1.3.2	Prospective Reward Prediction	250
9.2	Addiction and Dopamine	252
9.2.1	The Effects of Addictive Drugs on Dopamine	252
9.2.1.1	Measuring Dopamine during Drug Highs in Animals	252
9.2.1.2	Measuring Dopamine during Drug Highs in Humans	253
9.2.2	The Effects of Dopamine Drugs on Addiction	255
9.2.2.1	Pharmacologically Increasing Dopamine Signaling	255
9.2.2.2	Pharmacologically Blocking Dopamine Signaling	256
9.3	Conclusion	257
<b>10</b>	<b>Reward and Depression</b>	<b>262</b>
10.0	Introduction	262
10.1	Defining Mental Disorders	263
10.1.1	Modern Psychiatric Definitions	264
10.1.1.1	General Characteristics of Psychiatric Diagnoses	264
10.1.1.2	Defining Depression	264
10.1.1.3	Problems of Diagnostic Classification	265
10.1.2	Alternative and Complementary Definitions and Concepts	266
10.1.2.1	Appreciating Unconscious Motivations	267
10.1.2.2	Appreciating Environmental Causes	269
10.1.2.3	Appreciating Symptoms in Isolation	270
10.2	Basic Research on Reward Circuitry	271
10.2.1	Lesions, Sympathetic Arousal, and Early Models of Emotion	271
10.2.1.1	Papez's Circuit	271
10.2.1.2	The Limbic System and Triune Brain	273

10.2.2	Neuroimaging of Emotion and Depression	274
10.2.2.1	Rumination and the Default Mode Network	275
10.2.2.2	Sadness and the Anterior Cingulate	275
10.3	Clinical Studies on Depression	278
10.3.1	Nondrug Treatments for Depression	279
10.3.1.1	Psychosurgery	279
10.3.1.2	Electroconvulsive Therapy	280
10.3.1.3	Targeted Neuromodulation	281
10.3.2	Experimenting with Deep-Brain Stimulation	282
10.3.2.1	Activating Reward Regions	283
10.3.2.2	Disrupting Depression Regions	285
10.3.2.3	Personalized Stimulation	285
10.4	Conclusion	287
<b>11</b>	<b>Social Behavior</b>	<b>291</b>
11.0	Introduction	291
11.1	Human Applications of Oxytocin Drugs	292
11.1.1	Basic Human Research in Nonclinical Populations	292
11.1.1.1	Trust	292
11.1.1.2	Interpreting and Expressing Emotion	294
11.1.2	Applied Human Research in Autism	294
11.1.2.1	Defining Autism Psychology and Behavior	295
11.1.2.2	Basic Research Measuring Oxytocin in Blood	296
11.1.2.3	Clinical Trials with Intranasal Oxytocin	297
11.2	Oxytocin's Diverging Effects on Social Behaviors	298
11.2.1	Neurobiology of Social Peptides	298
11.2.1.1	Genetics and Molecular Biology	298
11.2.1.2	Hormonal Effects on Peripheral Tissues	298
11.2.1.3	Neuroanatomy and Drug Delivery to the Brain	298
11.2.2	Animal Research on Social Interaction	299
11.2.2.1	Sex Differences	300
11.2.2.2	Brain Regional Differences	302
11.3	Conclusion	304
<b>12</b>	<b>Language and Speech Prosthetics</b>	<b>307</b>
12.0	Introduction	307
12.1	Localizing Linguistic Functions	308
12.1.1	Speech Production	309
12.1.1.1	Lateralization	309
12.1.1.2	Broca's Area	310
12.1.2	Speech Comprehension	310
12.1.2.1	Wernicke's Area	310
12.1.2.2	Distributed Representations of Word Meaning	311

12.2 Speech Prosthetics and Thought-Reading	313
12.2.1 Typing and Controlling Cursors	313
12.2.1.1 Synthesizing Speech from Minimal Residual Movement	313
12.2.1.2 EEG Devices and Attention Monitoring	313
12.2.1.3 Intracranial Electrodes and Motor Imagery	314
12.2.2 Reading Intended and Inner Speech	315
12.2.2.1 Invasive Technologies Inferring Intended Speech	315
12.2.2.2 Noninvasive Technologies Inferring Covert Speech	317
12.3 Conclusion	318
Epilogue	322
