Part I Focus on Description

1	Estimating and Recording Abundance and Occurrence of Vertebrate Populations	3
1.1	Inventory Surveys of Larger Wildlife	3
1.2	Camera Traps	4
1.3	Genetic Methods	6
1.4	The Use of Detection Dogs in Nature Conservation	8
1.5	Indirect Assessments Using Tracks	8
1.6	Recording Occurrence	9
1.7	Counting Birds by Line Transects	9
1.8	Point-Stop Counts	11
1.9	Sound Decoys and Listening	12
1.10	Luring Top Carnivores	13
1.11	Automated Birdsong Recognition	14
1.12	Recording Ultrasonic Calls of Bats	14
1.13	Nest Search	15
1.14	Mist-Netting for Recording Understory Birds	17
1.15	Community-Based Monitoring	18
	1.15.1 Monitoring of Mammals and Large Birds in the Tropics	19
	1.15.2 Seen Sheets	22
	References	22
2	Sampling Invertebrates and Small Vertebrates	31
2.1	Species Inventories	31
2.2	Estimation of Abundances of Small Animals	32
2.3	Brief Overview of Different Recording Methods for Different Taxa	34
2.4	Hand Collection with an Exhaustor and Tweezers: Catching Through Own Effort	38
2.5	Insect Sweep Net	38
2.6	Knock-Down Methods	39
2.7	Canopy Fogging	40
2.8	Vacuum-Insect Net, D-Vac	41
2.9	Light Traps for Moths	42
2.10	Baits Traps for Butterflies	45

2.11	Flight Interception Traps	47
2.11.1	Window Traps	47
2.11.2	Air Ejector	47
2.11.3	Catch Funnel on the Trunk.	49
2.11.4	Malaise Traps.	49
2.12	Killing and Preservative Agents for Traps	55
2.13	Sticky Traps	55
2.14	Pan Traps	56
2.15	Carrion Trap and Dung Traps	57
2.16	Pitfall Traps (Barber Traps)	61
2.16.1	What Is Better: Dry Traps or Traps with Catching Fluid?	63
2.16.2	On the Arrangement of Traps in the Field	64
2.16.3	To What Extent Is the Result of a Species Inventory Limited by the Method Used?	64
2.17	Catch Trenches and Pits with Live Traps.	66
2.18	Life Trapping of Small Mammals and Other Small Vertebrates	68
2.19	Capturing Reptiles	71
2.20	Recording Arthropods (Macrofauna) of the Forest Floor	72
2.20.1	Catch Stones and Natural Cover Objects.	73
2.20.2	Ground Ejectors	73
2.20.3	Kempson Apparatus	75
2.20.4	Sieve Flotation Method	76
2.20.5	Nematode Extraction	76
2.20.6	Hand Selection.	77
2.21	Emergence Traps for Water Insects	77
2.22	Density Estimation of Earthworms	78
2.23	Microhabitat Areas on the Forest Floor	79
2.23.1	Tree Stumps as Ecological Microsystems	80
2.23.2	Lying Tree Trunks	81
2.24	Stem Ejectors	82
2.25	Tree Bark Structure and Arthropod Coenoses	84
2.26	Monitoring Programs for Terrestrial Habitats	88
2.27	Rapid Biodiversity Assessments (BIORAP)	89
2.27.1	Morphospecies.	89
2.28	Citizen Science.	91
2.28.1	Could Citizen Science Be Beneficial for Your Research?	94
	References.	94
3	Recording Abiotic Parameters.	107
3.1	Data Loggers	107
3.2	Radiation Measurements	108
3.3	Integrated Light Measurement with Light-Sensitive Paper or Film	112
3.4	Integrated Temperature Measurement with the Sugar Inversion Method	112

3.5	Humidity and Evaporation	113
3.5.1	Humidity	113
3.5.2	Evaporation	114
3.6	pH Measurement of Soil	114
3.6.1	Practical Procedure	116
3.7	Weather Stations	117
3.8	Smartphone Apps	117
	References	119
4	Mapping Landscape and Locating Individuals	121
4.1	Description of Vegetation Types	121
4.1.1	How Large Should the Survey Area Be?	122
4.2	Structural Parameters of Terrestrial Habitats	123
4.2.1	PCQ-Method for Woody Plants	123
4.2.2	Decay Stages of Lying Tree Trunks and Fire Marks in Tree Trunks	123
4.2.3	Deadwood (Coarse Woody Debris)	125
4.2.4	Angle Count Sampling with Dendrometer	126
4.2.5	Measurement of Vertical Structure and Canopy Closure in Forests	126
4.2.6	Density Estimation in Grassland Vegetation	128
4.3	Terrain Mapping	128
4.4	Use of Global Positioning System (GPS)	134
4.5	Use of Conservation Drones	135
4.6	Tracking the Movements of Animals Using Radiotelemetry and Satellite Telemetry	137
4.7	Calculation of Home Ranges of Animals	140
	References	142
5	Procedures for Estimating Populations	151
5.1	Estimation of Abundance by Distance Sampling	151
5.2	Population Estimates for Deer (<i>Cervus elaphus</i>)	154
5.3	Population Size Estimates from Recapture Results	156
5.3.1	Marking of Individuals	159
5.4	Differentiation of Photo Recordings	168
5.5	Estimation of Population Density by Removal Trapping	170
	References	171
6	Freshwater Ecology: Limnology	177
6.1	Introduction to Lotic and Lentic Freshwater Systems	177
6.2	Lotic Systems: Rivers	178
6.2.1	Research Questions and Methods for Lotic Systems (Rivers)	178
6.2.2	Methods to Approach These Research Questions	178
6.2.3	How Do You Determine the Velocity and Discharge of a River?	179
6.2.4	Habitat Assessment of Rivers	180
6.2.5	The CQHEI Habitat Evaluation	185
6.2.6	Sampling Benthic Macroinvertebrates from Rivers	186
6.2.7	Detection of Fish in Streams	191

6.3	Lakes	192
6.3.1	Research Questions for Lentic Systems (Lakes)	192
6.3.2	Vertical Stratification	192
6.3.3	Plankton	199
6.3.4	Mapping Lake Macrophytes	206
6.3.5	Water Quality	208
6.3.6	Temporary Waters	219
	References	222

Part II Focus on Analyses

7	Foraging Ecology	229
7.1	Problems in Recording an Animal's Diet	229
7.2	Pellets and Pluckings	230
7.3	Hair Atlas for Determining the Prey Remains of Carnivorous Mammals	233
7.4	Grass-Cuticle Atlas for Herbivorous Mammals and Field Crickets	236
7.5	Food Analysis in Field Locusts	238
7.6	Estimation of the Grazed Phytomass in a Meadow	239
7.7	Exploitation of a Food Source by Ants	241
7.8	Pollen Analysis in Flower Visitors	242
7.9	Studies on Flower Ecology in Flower-Visiting Insects	243
7.10	Large Animals as Seed Dispersers	248
7.11	Determination of the Prey Spectrum of Carnivorous Arthropods	252
	References	261
8	Estimating Predation Pressure	271
8.1	Manipulation of Predator Presence	271
8.2	Predator Reduction in New Zealand	272
8.3	Estimating the Predation Pressure on Bird Nests	273
8.4	Frequency of Bite Injuries and Wounds in Small Animals ...	279
8.5	Estimating Browsing Pressure at Woody Plant Sites	280
8.6	Artificial Wood-Pasture Systems (Silvopasture)	283
8.7	About the Top-Down Control of Population Densities	284
	References	286
9	Habitat Selection	291
9.1	Which Variables Are Used to Assess the Habitat Selection of Animal Species?	291
9.2	How Do you Compare Two Species Lists?	292
9.3	Habitat Preference	292
9.4	On the Relationship Between Habitat Quality and Animal Distribution	294
9.5	Habitat Suitability Indices	301
9.6	Which Characteristics Determine the Habitat Quality for an Animal Species?	303

9.7	Different Land Use Systems and Agroforestry	306
9.8	Are Species Useful as Bioindicators for Valuable Habitats?	307
	References	310
10	Habitat Evaluation for Conservation	317
10.1	Assessment for Landscape Planning	317
10.2	Problems with Species Lists	318
10.3	Habitat Quality Evaluation Criteria	318
10.4	Problems in Estimating Habitat Quality	320
10.5	What Animal Groups Should Be Recorded?	321
10.6	Long-Term Observations in Nature Conservation	323
10.7	What Measurable Short-Term Characteristics of a Species Community Are Essential?	328
10.8	What Ecological Properties or Interactions Make Species Valuable for Habitat Assessment?	329
10.9	Target Species	334
10.10	Quick Forecast of Survival of a Population (Threat-Level)	335
10.11	The Steps of a Population Viability Analysis	336
10.12	Relationship between Species Densities and Habitat Quality	340
10.13	Source and Sink Habitats	340
10.14	Terrain and Vegetation Parameters and Animal Ecological Evaluation Criteria	344
10.15	Evaluation of Hedges	346
10.16	Forest Edges and Edge Effect	348
10.17	Faunal Shifts in an Environmental Gradient	350
10.18	Strips Along Field Margins and Stream Banks	352
10.19	Created Flower Strips	355
10.20	Estimating the Influence of Mowing on the Fauna	357
10.21	Habitat Manipulation with Leaf Litter	359
	References	360
11	Landscape Ecology	371
11.1	Area Requirement of Animal Populations	371
11.2	Comparison of Forest Islands and Dry Locations as Habitat Islands	372
11.3	Individual Plants as Habitat Islands	374
11.3.1	Case Study: Manipulation with Herbaceous Plants as Habitat Islands	378
11.4	Networks of Biotopes	380
11.5	Landscape Corridors	384
11.6	Experiments with Artificial Small Bodies of Water	385
	References	387

12	Niche Differentiation Between Related Species	393
12.1	Niches and Guilds	393
12.2	Ecological Segregation of Songbirds in Foraging for Food	394
12.3	Studies of Species Pairs Concerning Niche Differentiation	397
12.4	Studies on Trophic Niche Overlap of Two Sympatric Primates	398
12.5	Niche Segregation in a Damselfly Community	399
	References	400

Part III Focus on Management and Planning

13	Managing Landscapes and Populations	405
13.1	Environmental Impact Assessment	406
13.2	Compensation Measures	410
13.3	Decision Analysis	415
13.4	Impact Through Tourism	417
13.5	Impact of Wind Farms	418
13.6	Salvage Logging	419
13.7	Prescribed Burning and Fire Effects in Forests	421
13.8	Subsistence Hunting of Bushmeat	428
13.9	Trophy Hunting and Conservation	431
13.10	Reintroduction to Reestablish Wild Populations	432
	References	435
14	Restoration Ecology	447
14.1	Restoration of Forests	447
14.1.1	Tropical Forests	448
14.1.2	Boreal Forests	450
14.1.3	Temperate Forests	451
14.1.4	Rewilding of Home Gardens and Backyards (Homegrown National Park)	452
14.2	River Restoration	453
14.2.1	Physical River Restoration	454
14.2.2	Meander Creation	457
14.2.3	Cleanup of Polluted Rivers	459
14.3	Restoration of Lakes	462
14.3.1	Lakeshore Restoration	463
14.3.2	Assessment Methods	463
14.3.3	Restoration Methods	464
14.3.4	Cleanup of Polluted Lakes	466
14.4	Wetland Restoration	470
14.4.1	Coastal Freshwater Wetlands: Erie Marsh	470
14.5	Peatland Restoration	472
14.5.1	Restoration of Prairie Fens	472
14.5.2	Bog Restoration	475
14.5.3	No Net Loss Policies	476
	References	477

15	Designing Data Collection	485
15.1	Main Features of Statistics.....	485
15.2	Samples: Formulation of Questions, Choice of Methods ...	486
15.3	Stratification.....	487
15.4	Independent and Dependent Samples	488
15.5	Descriptive Statistics	488
15.6	Size and Number of Samples.....	490
15.6.1	How Large Must a Sample Be?.....	490
15.7	Setting Up a Variable List	491
15.8	About the Selection of Statistical Tests	492
15.9	Examples of Statistical Tests	495
15.10	Examination of Influencing Factors.....	497
15.11	Use of Indices	503
15.11.1	Faunal Similarity	503
15.11.2	Diversity.....	505
15.11.3	Faunal Change	508
15.11.4	Niche Calculations.....	509
15.11.5	Dispersion Indices	510
15.11.6	Area-Species Relationships and Isolation Indices	511
	References.....	511
16	Writing Research and Grant Proposals	515
16.1	Recommendations for Writing Scientific Papers.....	515
16.2	On Structuring a Grant Proposal	515
	References.....	517
	Subject Index	519
	Taxonomic Index	525
