

# TABLE OF CONTENTS

## Volume I

### Chapter 1

#### Historical Background

Abstract .....	1
I. Introduction .....	1
A. The Roots of Scientific Holism .....	2
B. The Skeletal Problem .....	3
1. A Renal Thought Experiment .....	3
2. A Skeletal Transform .....	3
3. The Scenario Contains a Thorn .....	3
C. The Roots of Skeletal Atomism .....	5
1. The Kidney .....	6
2. The Skeleton .....	7

#### Note 1

Misextrapolation from Laboratory to Patient .....	11
---	----

#### Note 2

Default Judgments (or Unwitting Assumptions) .....	17
--	----

### Chapter 2

#### Biological Organization

Abstract .....	19
I. Introduction .....	19
II. Some General Properties of Biological IOs .....	19
A. The Ladder Property .....	19
B. The Association-Organization Property .....	20
C. The Function-Property Ratio .....	21
D. Functions Act Upwards in the Ladder .....	23
E. The Function-Control Relation .....	23
F. Space-Time Domain Scaling .....	24
G. The Whole is More Than and Different From the Sum of its Parts .....	25
H. The Andistributive Property .....	25
I. The Losing Betting Odds Property (LBO) .....	27
J. The Downwards Analysis .....	27
K. The Dendritic Property .....	27
III. Final Comments .....	28

#### Note 1

New Tricks and Old Dogs .....	31
-------------------------------	----

#### Note 2

Biological Continua, Switches, and Saturation .....	39
---	----

#### Note 3

Definition of Disease .....	45
-----------------------------	----

#### Note 4

Proof of a Function .....	47
---------------------------	----

## Chapter 3

### The Skeletal IO and the Lower IO ( $L_1$ )

Abstract .....	49
I. Introduction .....	49
A. An Aborted Career .....	49
B. The Basic General Functions Provided by the IO .....	50
1. Histogenesis .....	50
2. Growth .....	52
3. Modeling .....	52
4. Maintenance .....	52
5. Repair .....	54
6. Homeostasis .....	54
C. Skeletal Organization .....	54
II. The Lower IO ( $L_1$ ) .....	55
A. The Common Plan .....	55
B. Programming Modes and Variations .....	63
C. Some Basic Properties of the $L_1$ -Level System .....	64
1. The MC Mode .....	65
2. The N Mode .....	66
III. Functions of $L_1$ Level Entities .....	74
A. Histogenesis .....	74
B. Growth .....	75
C. Micromodeling .....	76
D. Rigidity .....	79
E. Strength .....	79
F. Elastic Compliance .....	79
G. The LOBO Effect .....	79
H. Destruction .....	80
I. Molecular-Level Turnover .....	80
IV. Illustrative Questions .....	80

#### Note 1

On the Former Controversy Surrounding the Skeletal IO .....	83
---	----

#### Note 2

Cities and Skeletons: An Analogy .....	89
--	----

## Chapter 4

### The Middle IO ( $L_2$ )

Abstract .....	93
I. Introduction .....	93
II. Growth .....	95
A. Proliferation .....	95
B. Architecture .....	96
C. Growth .....	97
D. Modeling .....	97
E. Programming Effects .....	99
1. Articular Cartilage .....	100
2. Epiphyseal Plate .....	100
3. Perichondral Ring .....	103
4. Fibrous Tissue .....	103

III.	Macromodeling .....	104
A.	General Properties .....	104
B.	Mechanical Determinants .....	105
C.	“S”- and “L”-Mode Mechanical Effects .....	108
D.	The Primal Role of Precursor Cells (“P”) in Modeling .....	110
E.	The “krσ” Phenomenon .....	110
IV.	Remodeling .....	111
A.	Basic Lamellar Bone Remodeling Properties .....	112
B.	The State Equations of Remodeling .....	121
C.	The MCN Analog for Remodeling .....	121
V.	Illustrative Questions.....	125

Note 1	Dynamic Histomorphometry.....	129
--------	-------------------------------	-----

Note 2	Some of the Histomorphometric Proof of the Bone Remodeling BMU and Coupling .....	133
--------	---	-----

Chapter 5  
**The Upper IO (L<sub>3</sub>)**

Abstract .....	147	
I.	Introduction .....	147
A.	Summation in Bulk: Part of Nature’s Camouflage.....	147
B.	General Properties of the Upper IO .....	148
II.	The Skeletal Envelope System .....	150
A.	Bone Envelopes and Envelope-Specific Behavior .....	150
B.	Mechanisms Underlying the Envelope-Specific Bone Behavior.....	151
C.	Locally Mediated Regulation of the IO.....	153
D.	Series and Parallel Gating .....	162
III.	Temporal Coherence .....	162
A.	The Nature of Temporal Incoherence.....	162
B.	Inducing Temporal Coherence as a Treatment Stratagem.....	163
C.	Temporal Coherence as a Research Tool .....	166
D.	Some Requirements of Coherence Treatment/Research .....	169
IV.	The Epiphyseal System .....	172
A.	Structural Features.....	173
B.	Functions .....	173
V.	Comments on Basic L <sub>3</sub> -Level Functions .....	178
A.	The Basic Roles of the Recruitment Function .....	178
B.	Modeling .....	179
C.	Remodeling .....	179
D.	The IO and Disease .....	180
E.	Repair .....	180
F.	Homeostasis .....	180
G.	Future Research .....	181
H.	Intrinsic and Extrinsic IO Disease .....	181
VI.	Illustrative Questions.....	182

Note 1	A Chronology of Some Basic IO Facts, the Discovery of which Awaited Dynamic Histomorphometry.....	185
--------	---	-----

Note 2	
Mechanical Usage Effects (MU) on Bone Remodeling .....	193
Interface .....	197
 Chapter 6	
<b>The IO, Osteoporoses, and Other Matters</b>	
Abstract .....	199
I. Introduction .....	199
A. Definitions .....	200
II. Comments on OPn and OPs .....	203
A. Growth Modeling-Dependent and Remodeling-Dependent OPn and OPs .....	203
B. Naturally Reversible and Irreversible OPn and OPs .....	203
C. Abnormal Bone Fragility .....	205
D. Envelope Sizes .....	212
E. Bone Balances and Turnover .....	212
F. Regional Differences in BMU-Based Remodeling .....	213
G. BMU Activation Effects .....	213
H. $\Delta B \cdot BMU$ Effects .....	215
I. The LOBO Property .....	216
J. Microdamage .....	216
K. Steady-State Turnover and Activation Function .....	216
L. Accelerated Gains and Losses of Bone in Adults .....	217
M. Fluoride and OPn .....	217
1. Background to Fluoride Treatment .....	218
2. Theoretical Possibilities .....	219
3. Histomorphometric and Other Clues to the Above Matters .....	221
4. Prevalent Notions about Fluoride Mechanisms .....	222
5. Existing Evidence .....	222
6. Provisional Synthesis .....	223
III. Comments on Osteomalacias .....	224
A. Increased Amounts of Osteoid .....	224
B. Osteoid Thickness .....	225
C. Osteoid Thickness and Surface Extent Should be Independent .....	230
D. The On-Off Phenomenon .....	230
E. Ratio of Fractional Resorption Surface to Fractional Formation Surface .....	230
F. Other Mineralization "Defects" .....	231
IV. Comments on Modeling .....	232
A. Micromodeling and Macromodeling are Different Functions .....	232
B. Macromodeling and Remodeling are Different Functions .....	232
C. Bone Malunions Cannot Correct Spontaneously in Adults .....	232
D. Periosteal and Cortical-Endosteal Modeling can be Independent .....	232
E. Fibrous Tissue Length and Thickness are Independent .....	233
V. Comments on Growth .....	233
A. $L_1$ -Mode and $L_2$ -Mode Growth can Vary Independently .....	233
B. The Common Plan of the IO Provides a Basis for Creating Different Kinds of Tissues with Different Properties and Functions .....	233
C. Growth and Modeling are Separate Functions .....	234

D.	Modeling Requires Growth but the Converse is not True .....	234
E.	The Framework of Skeletal Growth and Maturity .....	234
VI.	Illustrative Questions.....	236

Note 1

The Referent .....	241
--------------------	-----

Note 2

Recent Examples of Anholistic Skeletal Thought.....	251
---	-----

Chapter 7

**Mechanical Determinants of Lamellar Bone Macromodeling**

Abstract .....	267
I. Introduction.....	267
A. Orthopedic Biomechanics .....	267
1. Its Subdivisions .....	267
2. Properties of Materials .....	267
3. Kinematics.....	267
4. Pathophysiology of Trauma and Healing.....	268
5. Structural Design of the Adult Skeleton .....	268
6. Design Principles of the Growing Skeleton .....	268
B. General Remarks .....	268
C. The Design and Construction Strategy in Nature .....	268
D. Laws: Wolff's and Others .....	269
E. Review of Basic IO Functions.....	270
II. The IO Mechanisms of Lamellar Bone Modeling .....	271
A. Bone Macromodeling.....	271
1. The Resorption Drift.....	272
2. The Formation Drift .....	273
3. Drift Systems .....	274
4. Further Properties of Lamellar Bone Macromodeling .....	274
III. Mechanical Controls of Lamellar Bone Modeling.....	275
A. The Growth-Modeling Axiom .....	276
B. The Strain/Stress Axiom.....	276
C. The Minimum Effective Strain (MES).....	276
D. The Dynamic Strain Axiom .....	279
E. The Strain-Averaging Mechanism .....	279
F. The Flexure-Drift Axiom.....	281
G. Drift Barriers .....	283
H. The Magnitude Axiom .....	284
I. Exclusions.....	284
J. The Modeling Relations .....	285
IV. Organ-Level Examples of Bone Macromodeling .....	286
A. Vertebral and Metaphyseal Inwaisting.....	286
1. Flexural Neutralization.....	286
B. Natural Long Bone Curves .....	289
C. Abnormal Long Bone Curves .....	290
1. The Compression-Formation and Tension-Resorption Thesis.....	293
D. Modeling of Young or Recently Fractured Bone .....	293
E. Neuromotor Effects.....	293

V.	Discussion .....	295
A.	The Relative Modeling Rate.....	295
B.	The Bone Modeling Transducer: An Hypothesis .....	297
C.	Bone Microdamage.....	300
D.	Biomechanical Competence of Fracture Callus .....	302
E.	Conclusion .....	303
VI.	Illustrative Questions.....	305
	Note 1	
	The MES Concept: Some Analytical Meanings .....	307
	Note 2	
	A Chronology of Post-1960 Understanding of the Mechanical Determinants of Skeletal Modeling .....	321
	Note 3	
	Structural Adaptations to Mechanical Usage.....	325
	Index .....	353

## Volume II

### Chapter 8

#### **Mechanical Determinants of Hyaline Cartilage Modeling**

	Abstract .....	1
I.	Introduction.....	1
A.	The Antecedents.....	1
1.	Nervous System Problems .....	2
2.	Joint and Limb Alignment Problems.....	3
B.	General Remarks .....	3
II.	The IO Chondral Growth and Macromodeling Mechanisms .....	6
A.	Growth .....	6
B.	Macromodeling.....	7
III.	The Chondral Modeling Axioms .....	9
A.	The Postnatal Domain .....	9
B.	Strain Governs Chondral Modeling.....	9
C.	The Minimum Effective Signal (MES) .....	9
D.	The Dynamic Averaging Property .....	10
E.	Chondral Modeling Occurs During Growth.....	10
F.	The Chondral Growth/Force Response Curve (CGFR Curve) .....	10
G.	Chondral Modeling State Equations .....	12
IV.	Clinical Examples of L <sub>0</sub> -Level Chondral Modeling .....	13
A.	Epiphyseal Plate.....	13
1.	Knee Alignment .....	13
a.	The Negative Feedback Mode.....	14
b.	The Positive Feedback Mode.....	16
c.	Epiphyseal Plate Diameter.....	17
B.	Articular Cartilage.....	20
C.	Neuromotor Relationships to Chondral Modeling.....	25
V.	Comment .....	26
A.	The Relative Growth and Modeling Rates.....	26
B.	Chondral Dominance of Skeletal Architecture.....	26
C.	Chondral Creep.....	27

VI. Illustrative Questions.....	32
---------------------------------	----

Note 1

The Composition and Certain Other Properties of Bone, Cartilage, and Fibrous Tissue .....	39
--	----

Chapter 9

**Mechanical Determinants of Fibrous Tissue Modeling**

Abstract .....	43
I. Introduction.....	43
A. Preamble .....	43
B. General Remarks .....	44
II. The IO and Growth, Modeling, and Turnover .....	45
A. Growth .....	45
B. Modeling .....	49
1. Micromodeling.....	49
2. Macromodeling .....	49
C. Turnover .....	49
1. Fibrous Tissue Remodeling BMU.....	49
2. Molecular-Level Turnover .....	51
III. Fibrous Tissue Modeling Phenomena .....	51
A. General Facts.....	51
1. Control of Tendon Length .....	51
2. Control of Bulk Strength.....	51
B. The Dynamic Peak Strain Axiom.....	52
C. The Time-Averaging Axiom.....	52
D. Tension-Creep Compensation.....	52
E. The Minimum Effective Strain (MES).....	52
F. The Stretch Hypertrophy Axiom .....	53
G. State Equations for Fibrous Tissue Modeling.....	55
H. Rules of Thumb .....	55
IV. Discussion .....	56
A. Fatigue and Microdamage .....	56
B. Biomechanical Competence of Fibrous Tissues.....	57
C. Conclusion .....	59
V. Illustrative Questions.....	60

Note 1

The Attuned Perceptions .....	63
-------------------------------	----

Chapter 10

**The IO and Homeostasis**

Abstract .....	73
I. Introduction.....	73
A. Preamble .....	73
B. Pre-IO Concepts.....	74
II. The Skeletal Role in Homeostasis .....	79
A. The Histological System.....	79
1. Osteoclasts.....	79
2. Osteoblasts.....	82
3. The Remodeling BMU.....	83

B.	The Bone Surface-Lining Cell System.....	84
C.	The Percolation System .....	85
1.	Interpretation.....	91
III.	Synthesis.....	95
IV.	Illustrative Questions.....	96

Note 1

Some Properties of Physiological Balances.....	99
--	----

Chapter 11

**The Regional Acceleratory Phenomenon (RAP)**

Abstract .....	109
I. Introduction .....	109
A. Preamble .....	109
B. General Remarks .....	110
II. The RAP.....	110
A. Characteristics of the RAP .....	110
1. The Causes .....	110
2. The Nature of the RAP .....	110
3. Its Anatomical Distribution .....	112
4. Its Duration.....	115
B. Clinical Examples of RAP Effects.....	116
1. Potentiated Bone Healing .....	116
2. The Pathological RAP .....	117
3. Arthrofibrosis .....	118
4. Neuropathic Soft Tissue Problems .....	118
5. The Charcot Joint.....	118
6. Rheumatoid Phenomena .....	121
7. Obtunded RAP of Unknown Cause .....	121
C. The RAP in Research .....	123
1. The RAP in Histomorphometry .....	123
2. Longitudinal Bone Growth.....	123
3. Bone Mechanical Loading Experiments.....	124
III. Comment .....	125
A. Some System Properties of the RAP .....	125
B. Experimental Design and the RAP .....	125
C. Experimental Studies of the RAP.....	125
D. Causative Mechanisms of the RAP.....	127
E. A Final Common Path? .....	128
F. The RAP: It is Ubiquitous.....	128
IV. Illustrative Questions.....	128

Note 1

On Drug and Endocrine Effects on the Skeletal IO.....	131
---	-----

Chapter 12

**The Bone Repair Process**

Abstract .....	135
I. Introduction.....	135
A. A True Ministry.....	135

	B.	Background .....	135
II.		Biologic Processes .....	137
	A.	The Processes .....	137
	B.	The Biology .....	138
	1.	Temporal Overlap and Smearing.....	144
	2.	Biomechanical Competence .....	145
	3.	Normal Variations of Traumatically Induced Bone Repair .....	147
	4.	The General Biologic Functions Involved.....	147
III.		Clinical Problems Related to the Bone Repair Mechanism.....	147
	A.	Clinical Problems in the Repair of Bone Trauma.....	147
	1.	Rate Problems .....	148
	2.	Problems of Quantity and Kind .....	150
	a.	Insufficient Callus .....	150
	b.	Impaired Mineralization .....	152
	c.	A Remodeling Disorder .....	153
	B.	The Bone Repair Mechanism in Disease .....	153
IV.		Clinical-Biological Synthesis.....	153
	A.	The Skeletal IO .....	153
	B.	The Abnormal RAP .....	154
	C.	Abnormal "P" Response.....	155
	D.	Abnormal "D" .....	155
	E.	Abnormal "A" .....	155
	F.	Defective "M" .....	156
	G.	Abnormal "O" and "C" .....	156
	H.	Temporal Incoherence .....	156
V.		Therapeutic Prospects.....	157
	A.	Electrical Stimulation (ES) .....	157
	B.	Bone Grafting .....	158
	C.	By-Passing the Callus Phase.....	158
	D.	Direct Biological Stimulation.....	159
	E.	Future Research .....	159
	F.	Summary .....	160
VI.		Illustrative Questions.....	160

Note 1

		On the Acceptance of IO-Oriented Skeletal Research .....	163
--	--	--	-----

Chapter 13

**Choosing Appropriate Model Systems for Skeletal Research**

		Abstract .....	165
I.		Introduction.....	165
	A.	Background to the Terminology .....	165
II.		The Skeletal IO (and Growth, Macromodeling, and Remodeling) .....	166
	A.	General Remarks .....	166
	B.	Growth .....	168
	C.	Lamellar Bone Macromodeling .....	168
	1.	Control.....	168
	2.	Age Incidence .....	169
	3.	Distribution .....	169
	4.	Operational Features .....	169

5.	More on Distribution and Control.....	171
6.	Distributive Properties .....	171
7.	Functions of Macromodeling.....	172
D.	Lamellar Bone Remodeling .....	173
1.	Age Incidence, Distribution, and Control .....	173
2.	Operational Composition.....	173
3.	Distributive Properties .....	173
4.	The $\Delta B \cdot BMU$ .....	174
5.	Remodeling Variants in the Spongiosa of Growing Animals.....	174
6.	The Functions of Remodeling .....	175
III.	Concerning Intraskkeletal Mechanisms of Bone Disease .....	178
A.	Growth Modeling-Dependent Lamellar Bone Disease .....	178
B.	Remodeling-Dependent Bone Disease .....	183
C.	In Vitro Systems: Their IO-Oriented Properties .....	184
D.	Envelope-Specific Phenomena.....	186
E.	Skeletal Turnover Mechanisms .....	187
1.	Turnover in the Growing Skeleton .....	189
2.	Turnover in the Adult Skeleton .....	190
IV.	Propositions and Postulates .....	191
V.	Illustrative Questions.....	193

Note 1

On Tissue and Organ Culture Techniques .....	195
--	-----

Chapter 14

**An Optimizing Strategy for Skeletal Research**

Abstract .....	197
I. Introduction .....	197
II. The Algorithm .....	198
A. Some Goals of Medical Research .....	198
B. Two Ways to Find Cures.....	199
1. The Random Path.....	199
2. The Downward Search.....	199
C. A Basis for an Optimizing Algorithm .....	199
1. The Function/Property Ratio .....	200
2. The Function/Disease Relation.....	200
3. The Odds of Random Choices .....	200
4. Functions Evolve Upwards.....	200
5. Identifying the Causative Malfunctions .....	201
6. The Upwards Search.....	202
7. Recapitulation.....	202
8. The Control of the Causative Malfunction .....	203
III. Comment .....	205

Note 1

Theory: Some of Its Value and Uses .....	211
--	-----

Note 2

Some Effects of an Investment in a Scientific Posture.....	217
--	-----

Chapter 15

**Some Design Problems in Hip Replacement Prostheses: An Analysis**

Abstract ..... 221

I. Introduction ..... 221

II. The Problem ..... 222

    A. Brief History ..... 222

    B. Subsequent Course ..... 224

III. The Natural Solution ..... 225

    A. The Problem is Not ..... 225

    B. What the Normal Hip Achieves ..... 226

    C. How the Normal Hip Achieves it ..... 227

IV. Man's Solution ..... 232

    A. Base Plate Fit ..... 232

    B. Effects of Local Unit Load Multiplication ..... 232

    C. Differential Longitudinal Stiffness ..... 235

    D. The Cone Piston Effect ..... 235

    E. The Shear-Shunt and Skid Mechanisms ..... 237

    F. The Outflaring Cortical Flexure ..... 241

    G. Load Focusing can Multiply Trivial Total Loads into Catastrophic  
        Local Ones ..... 241

V. Possible Solutions ..... 242

    A. Transmission of the Vertical Load ..... 242

    B. The Shear Skid and Shunt ..... 242

    C. The Inwaisting Factor ..... 243

    D. Toggling ..... 244

    E. Mechanical Fit and Tolerances ..... 244

    F. The Cement ..... 244

    G. Biologic Fixation ..... 244

    H. The Biology ..... 244

    I. Generalization to Other Situations ..... 245

VI. Illustrative Questions ..... 245

Note 1

Communication between Laboratory and Clinic ..... 247

Chapter 16

**A Summation**

I. A Perspective ..... 251

II. A Metamorphosis ..... 251

III. Some Conclusions ..... 254

    A. Some Lessons of the Recent Past ..... 254

    B. The Future ..... 256

Note 1

Pre-IO Concepts of Skeletal Physiology ..... 257

Note 2

Science and Recipes: A Postface ..... 265

**Appendix I**

I. Introduction ..... 267  
II. Definitions of Symbols in the State Equations ..... 268  
III. Glossary ..... 268

Acknowledgments ..... 285

**References**

I. Symposia and Multiauthor Texts ..... 287  
II. Specific Citations ..... 288  
III. Group Citations ..... 314

Index ..... 319
