

Linear Models and the Relevant Distributions and Matrix Algebra: A Unified Approach, Volume 2 covers several important topics that were not included in the first volume. The second volume complements the first, providing detailed solutions to the exercises in both volumes, thereby greatly enhancing its appeal for use in advanced statistics programs. This volume can serve as a valuable reference. It can also serve as a resource in a mathematical statistics course for use in illustrating various theoretical concepts in the context of a relatively complex setting of great practical importance. Together with the first volume, this volume provides a largely self-contained treatment of an important area of statistics and should prove highly useful to graduate students and others.

Key Features:

- Includes solutions to the exercises from both the first and second volumes
- Includes coverage of several topics not covered in the first volume
- Highly valuable as a reference book for graduate students and researchers

Preface (to Volume 2)	vii
I Additional Topics	1
8 Constrained Linear Models and Related Topics	3
8.1 Constrained Models: Basic Definitions and Results	4
8.2 Constrained Models: Jointly Nonestimable Constraints	33
8.3 Some Results on the Testing of Hypotheses	41
8.4 Model “Sum of Squares”	46
8.5 Analysis of Variance (ANOVA)	48
8.6 Regression Splines	64
8.7 Reparameterization	69
Exercises	81
Bibliographic and Supplementary Notes	86
Index	89
II Exercises and Solutions	91
2 Matrix Algebra: a Primer	93
3 Random Vectors and Matrices	111
4 The General Linear Model	125
5 Estimation and Prediction: Classical Approach	133
6 Some Relevant Distributions and Their Properties	155
7 Confidence Intervals (or Sets) and Tests of Hypotheses	179
8 Constrained Linear Models and Related Topics	213
Additional References	233
