Preface	13
I Plenary Lectures	15
Z. P. Bažant: <i>Microplane modeling of damage or fracture and multiscale concepts</i>	16
K. Willam, C. Cotto, B. Blackard: <i>Current issues in interface mechanics</i>	18
F.-J. Ulm, M. Vandamme, C. Bobko, J. A. Ortega: <i>The nanogranular nature of hydrated nanocomposites: concrete, clay and bone</i>	20
D. Ambrosi: <i>Stress and growth in soft biological tissues</i>	22
B. Markert, W. Ehlers: <i>Modeling and simulation of spheroidal tumor growth</i>	24
T. Ch. Gasser, M. Auer, J. Swedenborg: <i>Hyperelastic modeling of the arterial wall with application to abdominal aortic aneurysms</i>	26
J. M. Huyghe, M. M. Molenaar, F. P. T. Baaijens: <i>Poromechanics of compressible charged porous media</i>	28
T. Belytschko, S. Loehnert: <i>Multiscale methods for the failure of heterogeneous materials</i>	30
S. R. Idelsohn, E. Oñate, J. Marti, M. De Mier: <i>Modeling fluids of heterogeneous materials including fluid-structure interactions using the particle finite element method</i>	32
R. Chudoba, F. Peiffer, M. Mombartz, J. Hegger: <i>Enriched finite element formulation for coupled cracking and debonding applied to textile reinforced concrete</i>	34
L. Sanavia, D. Gawin, B. A. Schrefler: <i>Multi-physics modelling of partially saturated geomaterials</i>	36
S. Bishnoi, K. L. Scrivener: <i>Modelling the hydration of portland cement using μic</i>	38
F. Darve, L. Sibille, F. Prunier, F. Nicot, F. Donze, B. Chareyre: <i>Bifurcations in granular materials: continuous and discrete approaches</i>	40
J. W. Rudnicki: <i>Coupled deformation diffusion effects on fault zone localization and dynamic slip propagation</i>	42
A. Roos, E. Héripré, J. Crépin, J.-L. Chaboche: <i>Microstrains, macrostresses and the role of subsurface fields in the identification of constitutive laws</i>	44
E. Rohan, F. Seifrt, B. Miara: <i>On dispersion and band gaps in heterogeneous media</i>	46

C. T. Sun, G. L. Huang: <i>Continuum models for heterogeneous solids under dynamic loading</i>	48
A. Zubelewicz, A. K. Zurek: <i>Formation of dynamic defect structures in metals at extreme loading rates</i>	50
D. Kolymbas: <i>Static analysis of soil reinforcement</i>	52
II Multiscale Modelling of Heterogeneous Materials	55
Ł. Kaczmarczyk, C. Pearce, N. Bićanić: <i>Multiscale analysis of heterogeneous materials for second order continuum</i>	56
S. Mesarovic, J. Padbidri: <i>Boundary conditions for multiscale simulations of heterogeneous microstructures: continua and granular materials</i>	58
W. Cecot: <i>On application of adaptive FEM to multiscale modeling</i>	60
I. Schmidt, L. C. Brinson: <i>Nanoholes and nanoshapes: the influence of nanotube geometry on polymer composite properties</i>	62
B. K. Thakkar, L. G. J. Gooren, R. H. J. Peerlings, M. G. D. Geers: <i>Creasing behavior of corrugated paper board</i>	64
V. Sansalone, T. Lemaire, S. Naïli: <i>Modeling fibrillar structures in bones: A multiscale approach</i>	66
M. Konrad, R. Chudoba, K. Meskouris, A. Scholzen: <i>Effect of local imperfections in cracks bridged by multi-filament yarn on multi-cracking response</i>	68
J. R. Carmona, R. C. Yu, G. Ruiz: <i>Numerical modeling of mixed-mode crack propagation in reinforced concrete</i>	70
L. Kong, P.-Y. Hicher, C. Chang: <i>Multiscale modelling of anisotropic clay</i>	72
J. Fořt, J. Halama: <i>Numerical solution of two-phase steady and unsteady flow with condensation</i>	74
III Discrete Cracking, Fracture and Interface Elements	77
N. Valoroso, L. Champaney: <i>Geometrically nonlinear interface elements for de-cohesion analysis of adhesively bonded joints</i>	78
G. Borino, B. Failla, F. Parrinello: <i>A damage interface model with cohesive-frictional transition</i>	80
D. Ciancio, I. Carol, M. Cuomo: <i>A stress recovery method for nodes along planar bi-material interfaces</i>	82
M. Cuomo, L. Contrafatto, M. Micciché: <i>Modeling of cohesive fracture processes by intra-element interfaces</i>	84

J. G. Rots, S. Invernizzi: <i>Sequentially linear analysis of discrete cracking in masonry panels</i>	86
IV Parameter Identification and Inverse Analysis	89
M. Hautefeuille, J. B. Colliat, S. Melnyk, A. Ibrahimbegović: <i>Probabilistic aspects for heterogeneous materials failure</i>	90
S. Bossuyt, H. Cuypers: <i>Multiple cracking in cementitious-matrix composites: Parameter identification via inverse methods and optical full-field measurements</i>	92
D. Novák, D. Lehký: <i>Identification of quasibrittle material parameters based on stochastic nonlinear simulation and artificial neural networks</i>	94
A. Kučerová, D. Brancherie, A. Ibrahimbegović, J. Zeman, Z. Bittnar: <i>Parameter identification of continuum-discrete damage model capable of representing heterogeneous strain field in localized failure</i>	96
V Modelling of Biological Tissues	99
M. A. Martínez, J. F. Rodríguez, V. Alastrué, M. Doblaré: <i>A finite element analysis of the end-to-side anastomosis and posterior re-stenosis process</i>	100
M. de Luca, A. Veneziani, T. Passerini: <i>Mechanical and numerical models for the deformation of the arterial wall</i>	102
D. Balzani, A. Klawonn, O. Rheinbach, J. Schröder, D. Brands: <i>Simulation of arterial walls using FETI domain decomposition methods</i>	104
V. Prot, B. Skallerud, G. A. Holzapfel: <i>Effects of connective tissue pathologies on mitral valve response</i>	106
E. Peña, B. Calvo, M. A. Martínez, M. Doblaré: <i>Application of a strain damage model to viscoelastic anisotropic biological soft tissues</i>	108
M. Böl, S. Reese: <i>On a mesomechanical modelling of skeletal muscles</i>	110
M. Holeček, P. Kochová, F. Moravec, Z. Tonar: <i>An approximate formula estimating Young's modulus of smooth muscle tissues in dependence on their microstructural parameters</i>	112
E. Rohan, R. Cimrman, V. Lukeš, V. Rohan: <i>Conception of the multicompartiment model for cerebral perfusion estimation, homogenization of hierarchical branching structures</i>	114
T. Ricken, J. Bluhm: <i>A multiphase model for biological tissue including growth and remodelling</i>	116
U. Nackenhorst, A. Lutz: <i>A computational approach on stress adaptive bone remodeling with applications to implant design optimization</i>	118

W. Ehlers, B. Markert, A. Acartürk: <i>Finite swelling of cartilaginous tissues</i>	120
J. M. Huyghe, C. Jongeneelen, Y. Schroeder, F. Kraaijeveld, R. de Borst, F. P. T. Baaijens: <i>Failure in cartilaginous tissues</i>	122
A. Pérez del Palomar, B. Calvo, M. Doblaré: <i>A porohyperelastic fiber reinforced model for human cartilage using the natural element method</i>	124
A. Pérez del Palomar, E. Lanchares, B. Calvo, M. Doblaré: <i>Simulation of curved incisions for astigmatism correction</i>	126
R. Grytz, G. Meschke: <i>An incompressible finite shell element with crimped collagen fibers for numerical analyses of the human eye</i>	128
VI Multi-Phase, Multi-Physics Modelling of Porous Media	131
J. E. Bolander, Z. Li: <i>Interface flow simulations in multi-phase particulate media</i>	132
M. Cuomo, A. Nicolosi: <i>Chemo-poroplastic model for durability analysis of concrete</i>	134
C. Comi, R. Fedele, U. Perego: <i>Thermo-mechanical modeling of alkali-silica reaction damage in concrete</i>	136
P. Grassl, C. Pearce: <i>Discrete modelling of fracture and moisture transport in heterogeneous materials</i>	138
R. Al-Khoury, L. J. Sluys: <i>New computational model for fracturing porous media</i>	140
A. Koliji, L. Laloui, L. Vulliet: <i>Effective stress in multi-phase porous media with double porosity</i>	142
R. Kohler, G. Hofstetter: <i>A constitutive model for partially saturated sands and silts</i>	144
L. Scholtès, B. Chareyre, F. Darve: <i>Micromechanical modelling of unsaturated granular media</i>	146
W. Pao, R. W. Lewis: <i>Chemo-physical coupling of porous medium</i>	148
P. Mira, M. Pastor: <i>An enhanced assumed strain four node quadrilateral element for coupled problems in soil dynamics</i>	150
M. Jöhrlitz, S. Diebels, H. Steeb: <i>Experimental and numerical investigation on a cellular rubber</i>	152
C. Bouby, Q.-C. He, V. Pensée: <i>Modelling of curved poroelastic interphases: A general coordinate-free asymptotic approach</i>	154
E. Lemarchand, L. Dormieux, C. Davy, F. Skoczylas: <i>Micromechanics contribution to permeability-stress couplings in macro-fractured geomaterials</i>	156

J. Niessner, H. Class, R. Helmig, M. Darcis: <i>Multi-scale–multi-physics modeling of flow and transport in heterogeneous porous media with application to subsurface flow and brain cancer treatment</i>	158
P. Charrier, B. Dubroca, C. Preux, G. Vignoles: <i>Multiscale modelling of transport in porous media with structural evolution</i>	160
VII Homogenization of Elastic and Inelastic Behaviour	163
J. Zeman, J. Novák, M. Šejnoha, J. Šejnoha: <i>Numerical assessment of Charles Bridge in Prague: An uncoupled multi-scale approach</i>	164
B. Mercatoris, T. J. Massart, A. Diaby: <i>Two-scale computational approaches for masonry structures with localisation of damage and their extension to flexural effects</i>	166
J. Dallot, K. Sab, D. Berg: <i>Overall yield strength domain of out-of-plane loaded brick masonry: Comparison of homogenization theory predictions to experimental results</i>	168
M. Lombardo, J. Zeman, M. Šejnoha: <i>Random field models of heterogeneous media via microstructural quantification</i>	170
H. A. Meier, E. Kuhl, P. Steinmann: <i>Towards confined granular multiscale methods</i>	172
D. H. Pahr, P. K. Zysset: <i>Influence of boundary conditions on simulated overall effective properties of cancellous bone</i>	174
V. Lukeš, E. Rohan: <i>Numerical modelling of large deforming foam materials by the computational homogenization method</i>	176
Ch. Hellmich, A. Fritsch: <i>'Universal' microstructural patterns in cortical and trabecular, extracellular and extravascular bone materials, quantified through multiscale continuum microelasticity</i>	178
C. Pichler, R. Lackner: <i>Multiscale characterization and modeling of creep and autogenous shrinkage of early-age cement-based materials</i>	180
S. Ricker, A. Menzel, P. Steinmann: <i>Computational homogenization for discrete micro-structures including damage</i>	182
VIII Instabilities, Anisotropy, Enhanced Continua	185
F. Nicot, L. Sibille, F. Darve : <i>Why does a domain of bifurcation exist in granular materials?</i>	186
R. Desmorat, A. Soud, F. Ragueneau: <i>Anisotropic damage model with micro-cracks closure effect for seismic applications</i>	188
J. Tejchman: <i>Modeling of textural anisotropy in granular materials with stochastic micro-polar hypoplasticity</i>	190
J. Pamin, A. Stankiewicz: <i>Localization of deformation and pore pressure in two-phase modified Cam-clay plasticity model</i>	192

T. Bennett, H. Askes:	
<i>Wave dispersion in heterogeneous materials using a C^0-implementation of gradient elasticity</i>	194
IX Microplane Models	197
Z. P. Bažant:	
<i>Nano-mechanics based size effect on safety factors and lifetime of quasibrittle structures</i>	198
G. Cusatis, Z. P. Bažant, A. Beghini:	
<i>Microplane model for composite laminates</i>	200
J. Ožbolt:	
<i>Modeling of wood in the framework of microplane theory</i>	202
F. C. Caner, I. Carol:	
<i>Microplane model for soft tissue</i>	204
A. E. Blangino, S. Valente, M. Barba:	
<i>An approach for a constitutive relation for skeletal ligaments using a microplane model</i>	206
F. A. Sánchez, P. C. Prat:	
<i>Elastoplastic microplane model for cohesive-frictional materials.</i>	
<i>Application to geotechnical engineering problems.</i>	208
G. Di Luzio, G. Cusatis:	
<i>Microplane model and solidification-microprestress theory for early age concrete behavior</i>	210
M. T. Kazemi, I. Zakeri:	
<i>Microplane M4 model for fiber reinforced concrete</i>	212
B. Deliktas, F. C. Caner, M. Ornek:	
<i>Inverse procedure for the parameters identification of the microplane material model</i>	214
A. Kučerová, M. Lepš, J. Němeček:	
<i>Estimation of microplane model parameters from experiments in uniaxial compression</i>	216
X Modelling of Transport Properties	219
F. Bouchelaghem:	
<i>A multiscale approach to the modelling of grout transport and fluid flow during permeation grouting</i>	220
M. Wyrzykowski, D. Gawin, F. Pesavento:	
<i>Two-scale modelling of water transport mechanisms in internally cured concrete</i>	222
I. Özdemir, W. A. M. Brekelmans, M. G. D. Geers:	
<i>Micro-macro thermo-mechanical modeling of heterogeneous materials</i>	224
Y. Hakobyan, K. Papoulia, M. Grigoriu:	
<i>Effective conductivity of random heterogeneous materials by a local method</i>	226
XI Plasticity, Damage and Fracture of Heterogeneous Materials	229

V. Monchiet, E. Charkaluk, D. Kondo:		
	<i>Determination of a macroscopic plastic yield behaviour of porous materials</i>	230
A. Butz, M. R. Ripoll, O. I. Benevolenski:		
	<i>Modeling the evolution of microstructure in single and dual phase polycrystalline metals under large plastic deformation</i>	232
A. Yavari, A. Ozakin:		
	<i>A covariant continuum theory of solids with distributed defects</i>	234
M. A. Hicks, J. D. Nuttall, W. A. Spencer:		
	<i>Stochastic and finite element modelling of 3D heterogeneity in geo-engineering</i>	236
J. Jeřábek, R. Chudoba, M. Vořechovský, M. Mombartz:		
	<i>Adaptive time-stepping algorithm exploiting the combined effect of softening and spatial variability of material parameters</i>	238
T. Ch. Gasser, M. Auer:		
	<i>Numerical prediction of the 3D fracture propagation in the proximal femur</i>	240
E. Benvenuti, A. Tralli:		
	<i>A regularized XFEM formulation for process zone modelling</i>	242
S. Melnyk, J. B. Colliat, M. Hautefeuille, A. Ibrahimbegović:		
	<i>Structured meshes for heterogeneous materials failure model</i>	244
J. Kozicki, J. Tejchman:		
	<i>Investigations of size effect in tensile fracture of concrete using a lattice model</i>	246
XII Microstructure Characterization and Reconstruction		249
G. Gioia, X. Dai, T. Sabuwala:		
	<i>Polyether polyurethane foams under multiaxial loading: Experiments and model</i>	250
M. Moesen, S. V. Lomov, I. Verpoest:		
	<i>The condualistic approach for modelling the geometry of heterogeneous materials</i>	252
P. Varga, P. K. Zysset:		
	<i>Sampling sphere distribution: A novel method to quantify structural anisotropy of trabecular bone in unsegmented images</i>	254
D. Ryppl, Z. Bittnar:		
	<i>Reconstruction of multi-phase microstructure from computer tomography</i>	256
L. Bicanová, H. Seiner, P. Sedlák, M. Landa, L. Heller:		
	<i>Elastic properties of finely twinned martensitic structures determined by resonant ultrasound spectroscopy</i>	258
XIII Microscale Modelling of Cementitious Materials		261
T. Matschei, D. Herfort, B. Lothenbach, F. P. Glasser:		
	<i>Relationships of cement paste mineralogy to porosity and mechanical properties</i>	262
B. Lothenbach:		
	<i>Thermodynamic modelling of the effect of temperature on the hydration and porosity of portland cement</i>	264

V. Šmilauer, T. Krejčí: <i>Multiscale heat conduction model for hydration heat of concrete</i>	260
J. Němeček, P. Kabele and Z. Bittnar: <i>On the appropriateness of various constitutive models for nanoindentation of cement paste</i>	268
P. Kabele, L. Novák, J. Němeček, J. Pekař: <i>Multiscale experimental investigation of deterioration of fiber-cementitious composites in aggressive environment</i>	270
XIV Posters	273
B. Marvalová: <i>Numerical modeling of the rate-dependent response of filled rubber</i>	274
V. Sansalone, P. Trovalusci: <i>Multiscale modeling and simulation of fiber reinforced composites: Macroscopic properties vs. microscopic features</i>	276
Yu. A. Chernyakov, V. P. Shneider, A. S. Polischuk: <i>The theory of plasticity, involving micro strains: Modelling of inelastic deformation of geomaterials</i>	278
Yu. A. Chernyakov, V. P. Shneider: <i>On connection of the theory of micro strains with microplane models</i>	280
C. Radu, I. C. Roca: <i>Medical image processing and biomechanical analysis of fibula bone</i>	282
L. Le Marrec, J.-P. Groby, A. Wirgin, L. R. Rakotomanana: <i>Low frequency approximation for recovering relaxed viscoelastic parameters of bones</i>	284
A. S. Kravchuk, P. Neittaanäki: <i>Phase interaction in a heterogeneous material on macro-and nanoscale: numerical approach</i>	286
R. Keslerová, K. Kozel: <i>Numerical solution of newtonian and non-newtonian fluids in the branching channel</i>	288
F. Moravec, M. Müller, M. Holeček: <i>A cellular model of viscoelastic material</i>	290
K. Forstová, J. Němeček: <i>Reconstruction of cement paste microstructure using image analysis</i>	292
J. Burša, P. Janíček: <i>Systemization of constitutive models and identification of their parameters</i>	294
J. Hartikainen, R. Kouhia, T. Manninen: <i>A model for concrete at high temperatures</i>	296
P. Sváček: <i>On approximation of non-Newtonian fluid flow by the finite element method</i>	298
Y. Chemisky, V.-L. Tahiri, A. Eberhardt, E. Patoor: <i>Numerical modelling of a shape memory alloy/elastomer composite</i>	300
J. Bobiński, J. Tejchman: <i>Implementation of non-local integral models into commercial FE-methods</i>	302

M. Baritz, G. Deliu: <i>Some considerations about elasticity of the eye-lens microstructure</i>	304
M. Picq, J. Pousin: <i>Variational reduction for the transport equation</i>	306
M. Perego, A. Veneziani, E. Agostoni, S. Salsa: <i>Mathematical and numerical modelling of focal ischemia</i>	308
V. Minutolo, E. Ruocco: <i>Heterogeneous interface numerical solution by field boundary element method</i>	310
D. Jaeger, B. Henrich, J. Schischka, J. Bagdahn, R. Jaeger, M. Moseler: <i>Modelling the mechanical properties of electro-spun non-wovens for tissue engineering starting from a single fibre experiment</i>	312
P. P. Procházka, A. E. Yiakoumi: <i>Optimization based back analysis of tunnel stability</i>	314
J. Svoboda, F. D. Fischer: <i>Onsager's principle: A handy tool in modelling of evolving microstructures</i>	316
J. Halgrin, F. Chaari, E. Markiewicz, P. Drazetic: <i>Spongy bone mechanical behavior under quasi static to dynamic loadings: Development of an equivalent physical model</i>	318
Q.-V. Le, F. Meftah, Q.-C. He, Y. Le Pape: <i>Analytical derivation of the asymptotic creep behavior of concrete by multiscale homogenization</i>	320
T. Krykowski, A. Zybur: <i>The analysis of load capacity changes of rc elements as the result of electrochemical corrosion and surface active substances</i>	322
O. Mičan, F. Maršík : <i>The influence of proton-exchange-membrane thickness on fuel cell efficiency</i>	324
E. Rizzi, S. Sangalli: <i>Biomechanical simulations of corneal refractive surgery</i>	326
T. Goldmann, H. Seiner, M. Landa: <i>Measurement of elastic coefficients of bovine cortical bone of general shape by ultrasonic immersion technique</i>	328
Author Index	331
