|                                                                                                                    | Page |
|--------------------------------------------------------------------------------------------------------------------|------|
| I. CHEMICAL AND PHYSICAL PROPERTIES OF RUBBER .....                                                                | 11   |
| 1. <i>The Structural Formula of Rubber Hydrocarbon</i> .....                                                       | 11   |
| 2. <i>The Molecular Weight of Rubber Hydrocarbon</i> .....                                                         | 15   |
| 3. <i>States of Rubber. Indicated by X-ray Spectrography</i> .....                                                 | 16   |
| 4. <i>States of Rubber. Indicated by Temperature-Volume Relationship</i> ..                                        | 22   |
| 5. <i>The Vulcanisation of Rubber</i> .....                                                                        | 26   |
| 6. <i>Butadiene-Derived Synthetic Rubbers</i> .....                                                                | 42   |
| II. THE T-50 TEST .....                                                                                            | 50   |
| 1. <i>Brief Description of Procedure and Apparatus</i> .....                                                       | 50   |
| 2. <i>Abstract of Experimental Results Obtained by the Originators of the</i><br><i>Test</i> .....                 | 52   |
| 3. <i>Some Factors Influencing the T-50 Value</i> .....                                                            | 53   |
| 4. <i>Theory of the T-50 Test</i> .....                                                                            | 68   |
| 5. <i>Effect of Metallic Oxides</i> .....                                                                          | 82   |
| a. <i>Zinc Oxide</i> .....                                                                                         | 82   |
| b. <i>Other Metallic Oxides</i> .....                                                                              | 91   |
| 6. <i>Effect of Organic Accelerators</i> .....                                                                     | 97   |
| 7. <i>Effect of Stearic Acid</i> .....                                                                             | 108  |
| 8. <i>Effect of Sulphur Concentration</i> .....                                                                    | 120  |
| 9. <i>Non-Sulphur Vulcanisation with Sulphur-Bearing Accelerators</i> .....                                        | 134  |
| 10. <i>Non-Sulphur Vulcanisation with Sulphur-Free Substances</i> .....                                            | 149  |
| 11. <i>Vulcanisation of Balata</i> .....                                                                           | 151  |
| III. DISSOLUTION AND FRACTIONATION OF VULCANISED RUBBER..                                                          | 155  |
| IV. DECREASE IN UNSATURATION DURING VULCANISATION .....                                                            | 166  |
| V. DISCUSSION OF THE EXPERIMENTAL OBSERVATIONS AND THEIR<br>BEARING ON THE MECHANISM OF VULCANISATION REACTIONS .. | 178  |
| SUMMARY .....                                                                                                      | 193  |
| AUTHOR AND SUBJECT INDEX .....                                                                                     | 200  |
