

TABLE OF CONTENTS

	Page
Chapter I. SOME PRELIMINARY QUESTIONS	1
§1. Matrices	1
§2. Vector spaces	10
§3. Analytic functions of several variables.	14
Chapter II. DIFFERENTIAL EQUATIONS	21
§1. Generalities	21
§2. The fundamental existence theorem . . .	23
§3. Continuity properties	30
§4. Analyticity properties	34
§5. Equations of higher order	37
§6. Systems in which the time does not figure explicitly	38
Chapter III. LINEAR SYSTEMS	47
§1. Various types of linear systems	47
§2. Homogeneous systems	49
§3. Non-homogeneous systems	62
§4. Linear systems with constant coefficients	65
Chapter IV. CRITICAL POINTS AND PERIODIC MOTIONS	
QUESTIONS OF STABILITY	72
§1. Stability	72
§2. A preliminary lemma.	82
§3. Solutions in the neighborhood of a critical point (finite time)	84
§4. Solutions in the neighborhood of a critical point (infinite time) for systems in which the time does not figure explicitly	91
§5. Critical points when the coefficients are periodic	109

Chapter V. TWO DIMENSIONAL SYSTEMS	117
§1. Generalities	117
§2. Linear homogeneous systems	119
§3. Critical points in the general case	125
§4. The index in the plane	133
§5. Differential systems on a sphere	142
§6. The limiting sets and limiting behavior of characteristics	162
 Chapter VI. APPLICATION TO CERTAIN EQUATIONS OF THE SECOND ORDER	 185
§1. Equations of the electric circuit	185
§2. Lienard's equation	188
§3. Application of Poincare's method of small parameters	194
§4. Existence of periodic solutions for cer- tain differential equations	204
 Index	 210
