

CONTENTS

<i>Preface</i>	<i>page vii</i>
<i>List of abbreviated titles</i>	x
<i>Chapter I. HISTORICAL INTRODUCTION</i>	
Dalton: atomic theory	1
Berzelius: dualistic theory	5
Frankland and Kekulé: discovery of valency	8
Gerhardt, Clausius, and Cannizzaro: gas theory	12
Mendeleeff: the periodic system	14
<i>Chapter II. DEVELOPMENT OF THE DOCTRINE OF VALENCY BEFORE THE RISE OF ELECTRONIC THEORIES</i>	
Selection of elements of standard valency	16
Valency as the foundation of the periodic system	25
<i>Chapter III, Section I. METHODS FOR DETERMINING STRUCTURE AND VALENCY</i>	
Classical methods: stereochemistry	30
Electric moments: molecular polarity	35
Diffraction methods: X-ray and electron diffraction	38
Spectral methods: infra-red spectra	39
Illustrative applications of the methods	40
<i>Section II. VALENCIES IN THE GROUPS OF THE PERIODIC SYSTEM</i>	
Group I A: the alkali metals	49
— B: copper and silver	52
Group II: beryllium, magnesium, mercury	55
Group III A: boron	59
— B: thallium	62
Group IV B: carbon, silicon, tin, lead	62
— A: titanium, zirconium, thorium	72
Group V B: nitrogen, phosphorus, arsenic	73
Group VI B: oxygen, sulphur, selenium, tellurium	80
Group VII B: the halogens	87
The A metals: vanadium, chromium, manganese	98

Chapter IV. THE ELECTRONIC SPIN THEORY OF VALENCY

- I. The foundations *page* 103
II. The spin theory applied to compounds of the
elements hydrogen to fluorine 121
The stereochemistry of compounds of the light
elements 138

Chapter V. THE SPIN THEORY APPLIED TO THE HEAVIER ELEMENTS

- Spectroscopic basis 144
Octet principle not applicable to the heavier elements 152
Long series 156
Incidence of colour and paramagnetism 159
The transitional elements 163
A and B families 166

Chapter VI. SPECIAL TOPICS

1. Co-ordination compounds 168
2. Bond energies, multiple links, and the method
of molecular orbits 179
Multiple links of carbon 196
Benzenoid compounds 210
Aromatic substitution 220
3. Single-electron bonds 223
4. Proton (hydrogen and hydroxyl) bonds 226

Appendix

- I. Constants, signs and conventions 235
II. Bond-lengths 236

Index

237
