PREFACE.....	3
INTRODUCTION <i>The Structure and Properties of Cellulose</i>	7
PART ONE <i>Amorphous and Crystalline Material</i>	19
CHAPTER I. General Survey.....	21
" II. The Periodate Method for Estimating the Amount of Accessible Material in Cellulose.....	30
" III. The Amount of Accessible Material in a Cellulose Derivative...	44
" IV. The Course of the Reaction between Cellulose and Sodium in Liquid Ammonia.....	48
" V. Some Reactions Confined to the Fiber Surface of Cellulose.....	57
CONCLUSIONS.....	61
PART TWO <i>The Mechanism of Some Cellulose Reactions</i>	63
CHAPTER VI. General Survey.....	65
" VII. The Various Types of Reaction.....	68
" VIII. Reactions of Cellulose with Inorganic and Organic Bases.....	80
" IX. The Reactivity of the Hydroxyl Groups of Cellulose.....	87
" X. The Distribution of Substituents.....	92
" XI. Outline of the Analytical Method.....	101
" XII. The Tosylation-Iodination Method.....	105
" XIII. Method of Analysis Illustrated by Three Examples.....	117
" XIV. Alkylation of Cellulose Dissolved in Quaternary Ammonium Bases	128
" XV. The Methylation of Cellulose.....	140
" XVI. The Methylation of Native Celluloses.....	147
" XVII. The Methylation of Viscose Rayon with Methyl Sulfate and 35 % Sodium Hydroxide.....	164
" XVIII. The Methylation of the Sodium Cupricellulose.....	169
" XIX. The Formation and Structure of the Hemimethylcellulose.....	182
" XX. The Formation of Cellulose Xanthate.....	190
CONCLUSIONS.....	198
PART THREE.....	201
CHAPTER XXI. The Preparation and Properties of Sulfoethylcellulose.....	203
GENERAL SUMMARY	215
LITERATURE CITED	223
APPENDIX.....	235
DIAGRAMS I—I8.....	237
NOMOGRAPHS I—3.....	270
