

CONTENTS

1.	Introduction (Robert Kalvoda)	15
2.	Analytical Chemistry and Environmental Protection (Jaroslav Zýka)	17
3.	Electrochemical Methods in Environmental Protection (Robert Kalvoda)	22
3.1	Introduction	22
3.2	Polarography and Voltammetry	23
3.3	Potentiometry	25
3.4	Coulometry	26
3.5	Conductometry	27
3.6	Other Electrochemical Methods	28
3.7	Conclusion	28
	<i>References</i>	29
4.	Polarographic and Voltammetric Methods (Robert Kalvoda)	30
4.1	Introduction — Classical Polarography	30
4.2	Improved Polarographic Methods	31
4.3	Electrochemical Stripping Analysis (ESA)	34
4.4	Electrodes Used in Polarography and Voltammetry	34
4.5	Polarography and Its Importance in Environmental Protection (EP)	35
4.6	Examples of the Use of Polarography in EP	39
4.6.1	Determination of Inorganic Substances	40
4.6.2	Determination of Organic Substances	43
4.6.3	Use of Adsorption Phenomena	51
4.7	Combination of Polarography with High-Performance Liquid Chromato- graphy	53
	<i>References</i>	53

5.	Electrochemical Stripping Analysis (Miloslav Kopanica and František Opekar)	58
5.1	Introduction	58
5.2	ESA Methods and Conditions	59
5.2.1	Electrolytic Preconcentration	59
5.2.2	Electrolytic Stripping	59
5.3	Selection of the Experimental Conditions	61
5.3.1	Sample Preparation	61
5.3.2	Electrodes	62
5.3.3	Electrolysis Vessel	64
5.4	ESA Instrumentation and Automation	64
5.4.1	Automation of the Procedure	65
5.4.2	Automated Handling of the Experimental Data	66
5.4.3	Automation of the Sample Manipulation	67
5.5	Application of the ESA Methods	67
5.6	Determination of Trace Metals in Water	67
5.6.1	Sampling and Sample Pretreatment	68
5.6.2	Filtration of Natural Water Samples	68
5.6.3	Storage of Filtered Samples	69
5.7	Laboratory for Trace Analyses	69
5.7.1	Cleaning of Vessels	70
5.7.2	Distilled Water	71
5.8	Removal of Sources of Contamination in ESA	71
5.9	Sample Treatment Prior to Analysis	72
5.9.1	Preparation of Filtered Water Samples	72
5.9.2	Filters	73
5.10	Selection of the ESA Method	73
5.11	Selection of the Electrode	74
5.12	The Determination Itself	74
5.13	Determination of Individual Metals	76
5.14	Importance of ESA for Trace Metal Speciation in Natural Water	77
5.15	Use of ESA in the Analysis of Biological Materials	79
5.16	Determination of Organic Compounds	81
	<i>References</i>	82
6.	Potentiometry with Ion-Selective Electrodes (Josef Veselý and Karel Štulík)	85
6.1	Introduction	85
6.2	Survey of Modern Measuring Methods with ISEs	87
6.3	Determination of Nitrogen Compounds	88
6.3.1	NH ₄ /NH ₃ Determination	88
6.3.2	Determination of Nitrogen Oxides, NO _x	90
6.3.3	Determination of Nitrates	90
6.3.4	Determination of Total Nitrogen	92
6.4	Determination of Sulfur Compounds	92
6.4.1	Determination of Sulfides and of Hydrogen Sulfide	93
6.4.2	Determination of Sulfur Dioxide and Sulfites	95

6.4.3	Determination of Sulfate	97
6.4.4	Determination of Total Sulfur	98
6.5	Determination of Residual Chlorine and of the Total Content of Oxidants	98
6.6	Determination of Heavy Metals	100
6.7	Determination of Cyanides and Cyanogen	101
6.8	Determination of Hydrogen Fluoride and Fluorides	103
6.9	Determination of Surfactants	105
	<i>References</i>	106
7.	Semiconductor Sensors (Josef Fexa)	109
7.1	Introduction	109
7.2	Oxide-Type Semiconductor Sensors	111
7.3	Ion-Selective Transistors of the MOS-ISFET Type	116
7.4	Chemically Sensitive Transistors of the MOS-CSFET Type	118
7.5	Sensors Based on Interface Contact Phenomena	121
7.6	Examples of Applications	123
7.7	Conclusion	125
	<i>References</i>	126
8.	Electrochemical Detectors and Monitors of Atmospheric Pollution (Jiří Tenygl)	128
8.1	Introduction	128
8.2	Problems of Measurement	129
8.3	Principal Parts of Monitors	130
8.4	Sampling and Sample Treatment	131
8.5	Calibration and Zero Adjustment	132
8.6	Preparation of Calibration Mixtures	133
8.7	Absorption Prior to Analysis	134
8.8	Principles of Measurement	135
8.8.1	Potentiometry	135
8.8.2	Voltammetry	136
8.8.3	Electrodes with an Electrolyte Film	136
8.8.4	Porous Electrodes	137
8.8.5	Electrodes Covered with Membranes	139
8.8.6	Coulometry	141
8.8.7	Galvanic Analysis	143
8.8.8	Automated Electrochemical Titrators	144
8.9	Determination of Various Pollutants	145
8.9.1	Sulfur Dioxide	145
8.9.2	Hydrogen Sulfide and Sulfur-Containing Compounds	147
8.9.3	Nitrogen Oxides	148
8.9.4	Carbon Monoxide	149
8.9.5	Photochemical Oxidants	150
8.9.6	Chlorine	151
8.9.7	Cyanogen	152
8.9.8	Hydrocarbons	152

8.9.9	Other Gases	152
	<i>References</i>	153
9.	Electrochemical Detectors for Liquid Chromatography and Other Analytical Flow-Through Systems (Antonín Trojánek)	157
9.1	Introduction	157
9.2	Flow-Through Analytical Systems	157
9.3	Electrochemical Detection Methods	158
9.3.1	Potentiometric Detection	158
9.3.1.1	Ion-Selective Electrodes	158
9.3.1.2	Redox Electrodes	160
9.3.1.3	Electrodes of the Second Kind	161
9.3.2	Voltammetric Detection	161
9.3.2.1	Selectivity	161
9.3.2.2	Sensitivity	162
9.3.2.3	Linear Dynamic Range	163
9.3.2.4	Response Stability and Reproducibility	163
9.3.2.5	Dynamic Behavior	163
9.3.2.6	Detectors	164
9.3.2.6.1	Mercury Electrodes	164
9.3.2.6.2	Solid Electrodes	167
9.4	Conclusions and Applications	171
	<i>References</i>	172
10.	Measurement of Oxygen in Biological Systems (Lubomír Šerák)	174
10.1	Introduction	174
10.2	Methods and Sensors	175
10.2.1	The Dropping Mercury Electrode	175
10.2.1.1	Determination of Oxygen Using the Dropping Mercury Electrode	177
10.2.2	Sensors Other than the Dropping Mercury Electrode	183
10.2.2.1	The Clark Sensor	184
10.3	Conclusion	189
	<i>References</i>	190
11.	The Use of Electrochemical Measurements in the Ecology of Shallow Water Reservoirs (Jaroslav Čáp, Jan Pokorný, and Lubomír Šerák)	192
11.1	Description of Processes Occurring in Reservoirs	192
11.2	Measuring Methods	198
11.3	Ecological Evaluation	200
	<i>References</i>	202

12.	Electrochemical Analysis of Water Toxicity (Pavel Hofmann)	203
12.1	Introduction	203
12.2	Methods of Determination of Water Toxicity	204
12.2.1	The Principal Analytical Process	205
12.2.2	Sample Preparation for Toxicity Determination	207
12.3	The Measuring Technique	208
12.3.1	The Principle of the Type I Analyzer	208
12.3.1.1	Analyzer Design	208
12.3.1.2	Analyzer Operation	209
12.3.2	The Principle of the Type II Analyzer	211
12.3.2.1	Analyzer Design	212
12.3.2.2	Analyzer Operation	212
12.3.3	The Principle of the Type III Analyzer	213
12.3.3.1	Analyzer Design	213
12.3.3.2	Analyzer Function	214
12.3.3.3	Analyzer Operation	215
12.4	Measuring Results	216
12.5	Further Development	219
	<i>Reference</i>	219
13.	The Use of Analog Circuits in the Laboratory Construction of Measuring Instruments (František Opekar)	220
13.1	Introduction	220
13.2	Voltage and Current Sources	223
13.3	Voltage Measurement	223
13.3.1	Automated Potentiometric Titrations	225
13.3.2	Potentiometric Stripping Analysis	226
13.4	Current and Charge Measurement	227
13.4.1	Polarographic, Voltammetric, and Amperometric Measurements	229
13.5	Resistance Measurement	230
13.5.1	Monitoring of Pressure Fluctuations in a Liquid Circuit with a Peristaltic Pump	231
13.6	Modular Sets with Operational Amplifiers	232
