

CONTENTS

Preface	vii
-------------------	-----

INTRODUCTION

I. History, Botany, Cultivation, Marketing, and Diseases of Citrus Fruits	3
A. History	3
1. Background and Recent Progress of Citrus Culture . . .	3
2. Historical Note on Development of the Citrus Industry . .	3
3. Distribution and Main Centers of Production	6
B. Botany	7
1. The Genera <i>Citrus</i> , <i>Fortunella</i> , and <i>Poncirus</i>	7
2. Some Individual Species of the Genus <i>Citrus</i>	9
C. Cultivation and Marketing	15
1. Cultivation Methods. Seasons of Harvesting	15
2. Packing and Marketing Methods	16
3. Selection of the Fruit—the Culls	19
D. Citrus Fruit Diseases	19

PART I. CHEMICAL COMPOSITION

II. The Epicarp or Flavedo	25
A. Photosynthesis and Pigments	25
1. Anatomy of the Epicarp	25
2. Chlorophyll	26
3. Mechanism of Photosynthesis	28
B. The Carotenoids	29
1. Carotene and Xanthophyll	29
2. Determination of Plant Pigments	33
C. Artificial Coloring of Citrus Fruit	34
1. Influence of Color on Marketability of the Fruit	34
2. Old Californian Coloring Method	35
3. New Coloring Method	36
4. Atmospheric Conditions	36
5. Latest Improved Methods	38
6. Recapitulation	39
D. Essential Oils	40
1. Location of Essential Oils in Epicarp	40
2. Theories on Formation of Essential Oils	41
3. Function of Essential Oils	45
4. Components of Essential Oils	45
(a) Hydrocarbons	45
(b) Oxygenated Constituents	49
(c) Recapitulation	59
5. Tabulation of Constituents	62
6. Historical Note	62

7. Description of Individual Oils	63
(a) Oils Derived from Peel of Fruits	63
(b) Oils Derived from Flowers, Leaves, and Twigs	70
References	73
III. The Mesocarp or Albedo	77
A. Carbohydrates	77
1. Composition of the Albedo	77
2. Description of the Carbohydrates of Citrus Fruits	78
(a) Monosaccharides	79
(b) Disaccharides	83
(c) Polysaccharides	84
3. Alcoholic Fermentation	86
4. Other Fermentations	87
B. Pectic Substances	88
1. Definition. Commercial and Physiological Significance of the Pectins	88
2. Transformation of Protopectin into Pectin	89
3. Chemical Properties of Pectin	90
4. Pectic Enzymes	92
5. Determination of Pectin	94
C. Glucosides	96
1. General Characteristics of the Group	96
2. Description of Some Glucosides	97
References	101
IV. The Endocarp	103
A. Organoleptic Aspects of Citrus Juices	103
1. Morphology of the Endocarp	103
2. Color of Citrus Juices	103
3. Flavoring Constituents of the Juices	104
4. Acidity of Citrus Juices	105
5. The Active Acidity- <i>pH</i>	108
6. The Sour Taste	110
B. Sugars and Pectins in Citrus Juices	114
1. Occurrence of Sugars in Citrus Juices	114
2. Methods of Determination of Sugars in Juices	117
(a) Reducing Sugars (Lane-Eynon Method)	118
(b) Total Sugars	120
3. Pectins in Citrus Juices	120
C. Some Minor Constituents of Citrus Juices	122
1. Proteins	122
2. Enzymes	125
(a) Influence of Enzymes in Biochemical Reactions, Definition and Structure	125
(b) Properties of Enzymes	126
(c) Classification of Enzymes	127
(d) Optimal Conditions for Enzyme Activity	130
(e) Mechanism of Enzyme Action	131
3. Fatty Constituents in Citrus Juices	132
4. Mineral Constituents of Citrus Juices	132
5. Gaseous Constituents of Citrus Juices	134
6. Determination of Air and of Dissolved Oxygen in Citrus Juices	135

D. Vitamins	136
1. Definition	136
2. Ascorbic Acid (Vitamin C)	137
(a) Occurrence	138
(b) Structure	141
(c) Oxidation	142
(d) Loss	144
(e) Method of Preparing Ascorbic and Dehydroascorbic Acids	147
(f) Antiscorbutic Properties	149
(g) Methods of Estimation	150
3. Vitamin P	152
4. Vitamin A (Axerophthol)	155
5. Vitamin B ₁ (Thiamin, Aneurin)	157
6. Vitamin G (B ₂) (Riboflavin or Lactoflavin)	159
7. Inositol (C ₆ H ₁₂ O ₆)	161
E. Seeds	162
References	164

PART II. CHEMICAL TECHNOLOGY

V. Preparation of the Fruit and Extraction of Citrus Oils	169
A. Preparation of Fruit for Processing	169
1. Flow Sheet for the Manufacture of Citrus Products	169
2. Maturity Test	172
3. Receiving and Storing of Fruit	175
4. Feeding the Line and Inspection	178
5. Washing and Sizing	179
B. Extraction of Citrus Oils	182
1. Methods of Extraction	182
2. Machines Rasping Whole Fruit	184
(a) Écuelle	184
(b) Bergamot "Machinette"	185
(c) "Avena" Machine	185
(d) "Speciale" Machine	187
(e) American Drum Extractor	188
(f) Jaf-Ora Model	189
3. Methods Involving Treatment of Peels	190
(a) "Sponge" Processes	191
(b) "Sfumatrici" Machines	193
4. Methods of Separation and Centrifuging	196
(a) Separation	196
(b) Centrifuging	200
(c) Bennett Process	202
5. Oil Recovery from Crushed Fruit	204
6. Various Other Methods of Oil Recovery	204
(a) Distillation	204
(b) Extraction by Solvents	206
7. Deterpenation. Preparation of Terpeneless Oil	207
8. Seasonal Variations in the Yields of Oil	210
9. Keeping Qualities of Citrus Oils	211
10. Examination of Citrus Oils	214
(a) Estimation of Oil Content in Fruit	215

(b) Physical Tests	216
(c) Chemical Tests	221
References	225
VI. Processing Citrus Juices	227
1. Halving the Fruit	227
2. Juice Extraction by Hand	227
3. Mechanical Extraction	230
4. Screening of Juices	240
5. Microbiology of Citrus Juices	242
6. Preservation of Citrus Juices	244
(a) Changes Occurring in Juices	244
(b) Chemical Preservatives	247
(c) Deaeration of Citrus Juices	258
(d) Preservation by Heat	262
(e) Other Methods of Preservation	268
7. Darkening or "Browning" of Citrus Juices during Storage	271
References	273
VII. Concentrated, Frozen, Sweetened, and Fermented Juices	275
A. Concentrated Juices	275
1. General Discussion—Difficulties of Concentration	275
2. Preparing the Juice Prior to Concentration	276
3. Evaporating Apparatus	278
4. Steam Requirements	281
5. Securing the Vacuum and Condensation of Vapor	282
6. Preservation and Storage of Concentrates	284
7. Testing Concentrates	286
8. Powdered Citrus Juices	290
B. Application of Cold	292
1. Alternative Methods of Freezing	292
2. Frozen Citrus Juices	292
(a) Microbiology of Frozen Juices	292
(b) Physical and Chemical Changes	293
(c) Quick Freezing	293
(d) Enzymatic Changes	294
(e) Technical Methods of Freezing	295
(f) Cool Storage	296
3. Concentration by Freezing	297
(a) Monti Method	298
(b) Gore Method	298
(c) Krause Method	299
(d) Storage of Concentrates. Recent Developments	300
4. Summary	302
C. Sweetened Juices	302
1. Syrups or Squashes	302
2. Cordials	304
3. Carbonated Citrus Beverages	307
D. Fermented Juices	309
1. Citrus Wines	309
2. Brandy and Liqueurs	313
3. Citrus Vinegar	314
(a) Mechanism	314
(b) Manufacture	315
(c) Summary	318

4. Other Uses of Fermented Citrus Juices	318
References	319
VIII. Miscellaneous Citrus Products	321
A. Jams, Jellies, and Marmalades	321
1. General	321
2. Pectin-Acid-Sugar Ratio	322
3. Manufacture	323
(a) Preparation of the Peel	323
(b) Preparation of the Juice	324
(c) Cooking the Marmalade	324
B. Canning "Hearts"	326
1. Survey of Process	326
2. Steps in Processing	327
(a) Grading and Washing	327
(b) Scalding and Peeling	327
(c) Sectioning the Fruit	329
(d) Filling the Tins	329
(e) Exhausting	330
(f) Sealing the Cans	331
(g) Sterilization	331
3. Spoilage	332
4. Recent Developments	333
C. Manufacture of Citric Acid	333
1. Source of Raw Materials	333
2. Direct Crystallization of Citric Acid	334
3. Ion-Exchange Method	335
4. Scheele Method	337
(a) Expression and Purification of the Juices	337
(b) Precipitation of Calcium Citrate	339
(c) Decomposition of Calcium Citrate and First Crystallization	341
(d) Purification of Citric Acid Crystals	343
5. Mycological Method	344
6. Lactic Acid	348
D. Utilization of Citrus Peels	348
1. Problems of Disposal of Exhausted Peels	348
2. Dehydrated Peels	349
3. Peels in Brine	349
4. Ensilage of Citrus Peels	351
5. Dry Citrus Meal	352
(a) Processing	352
(b) Feeding Value	355
6. Dried Citrus Pomace	357
7. Utilization of Waste Juice (Citrus Molasses, Alcohol, Dry Yeast)	357
E. Manufacture of Citrus Pectin	361
1. General Considerations	361
2. Manufacturing Procedure	362
(a) Preparation of Material and Leaching	362
(b) Extraction of Pectin by Hydrolysis	363
(c) Dry Pectin	364
3. Various Other Methods	365
4. Low-Ester Pectinic Acids	367

5. Evaluation of Pectin	367
6. Uses of Pectin	368
7. Preparation of Naringin	369
References	370
IX. Conclusions. New Lines of Approach	375
1. Vitamin C from Peel Effluent	375
2. Utilization of Peel	376
3. Converting Pectin into Vitamin C	377
4. Drying by Sublimation	378
5. Frozen Jellies	380
6. High-Frequency and Infrared Dehydration	380
7. Direct Crystallization of Citric Acid	381
8. Sterilization by Ultraviolet Rays and Ultrasonics	381
Appendix I. Factory Hygiene and Waste Disposal	383
Appendix II. Standard Specifications	387
Author Index	395
Subject Index	403
