

Contents

<i>Message</i>	v
<i>Preface</i>	vii
<i>List of Contributors</i>	xi
<i>Abbreviations</i>	xvii
1. Recent Advancements and Insights on Various Stress Management Techniques in Cereals	1
2. Advancements in Genome Editing Technologies for Enhancing Crop Improvement	31
3. Accelerated Breeding Approaches for Enabling Sustainable Rice Farming	46
4. Navigating the Development of Next-Generation Crop Varieties Using Genomic Selection for Food and Nutritional Security	78
5. Genetic Innovations in Wheat for Sustainable Agriculture and Global Food Security	101
6. Improvement Strategies Addressing Malnutrition: Augmenting Bioavailability and Biofortification in Food Crops	120
7. Millets: An Emerging and Promising Climate-Resilient Nutri-Cereals of the Globe	141
8. Underutilized Vegetable Crops for Food and Nutritional Security	154
9. Grafting Innovations in Vegetable Crops to Enhance Nutritional Quality for Food Security	180
10. Advancements in Plasma Technology for Enhancing Crop Resilience to Environment Stress	198
11. Bioengineering Starch and Amylose-lipid Complex: From Genetic to Sustainable Industrial Application	218
12. High-Throughput Phenotyping Tools for Sustainable Agriculture	232
13. Utilizing Bioinformatics Tools and Machine Learning Techniques to Advance Sustainable Crop Improvement	259
Index	281
About the Editors	283
