This volume presents the papers accepted for publication from the 4th international conference of the ECONGOOD movement – the international movement for enhancing and building an Economy for the Common Good (ECG). The “ECG movement”, today ECONGOOD, started in 2010 from Vienna, Austria, based on a book with the same title, and has evolved since to all continents. One of its many activities is a Science & Research Hub which co-organizes in conjunction with rotating local co-hosts biannual scientific conferences. The first event was ECGIC I in Germany, hosted by the University of Applied Sciences Bremen; ECGIC II took place at the University of Valencia in Spain, hosted by the Chair Economy for the Common Good, which exists since 2017; at that university ECGIC III was held in 2024, Lasuwarden in the Netherlands, organized by a consortium of three Dutch scientific institutions – NHL Stenden University
