about the author	xxix
1 Intuition of AI	1
What is artificial intelligence?	2
The evolution of AI	8
Different types of problems	10
Intuition of AI concepts	12
Some uses for AI algorithms	16
Conclusion	21
2 Search fundamentals	23
What are planning and searching?	23
Cost of computation: The reason for smart algorithms	26
Problems that search algorithms can solve	27
Representing state: Creating a framework to represent problem spaces and solutions	31
Uninformed search: Looking blindly for solutions	38
BFS: Looking wide before looking deep	40

DFS: Looking deep before looking wide	49
Use cases for uninformed search algorithms	57
Optional: More about graph categories	58
Optional: More ways to represent graphs	61

3 Intelligent search 65

Defining heuristics: Designing educated guesses	65
Informed search: Looking for solutions with guidance	69
Adversarial search: Looking for solutions in a changing environment	80

4 Evolutionary algorithms 99

What is evolution?	99
Problems that evolutionary algorithms can solve	103
Life cycle of genetic algorithms	107
Encoding the solution spaces	110
Binary encoding: Representing possible solutions with 0s and 1s	113
Measuring fitness of individuals in a population	117
Selecting parents based on their fitness	119
Reproducing individuals from parents	123
Populating the next generation	130
Configuring the parameters of a genetic algorithm	134
Use cases for evolutionary algorithms	135

5 Advanced evolutionary approaches 139

Evolutionary algorithm life cycle	139
Alternative selection strategies	141
Real-value encoding: Working with real numbers	145
Order encoding: Working with sequences	150

Tree encoding: Working with hierarchies	153
Common types of evolutionary algorithms	158
Glossary of evolutionary-algorithm terms	158
More use cases for evolutionary algorithms	159
6 Swarm intelligence: Ants	161
.....	
What is swarm intelligence?	161
Problems that ACO algorithms can solve	164
Representing state: What do paths and ants look like?	169
The ACO algorithm life cycle	173
Use cases for ACO algorithms	198
7 Swarm intelligence: Particles	201
.....	
What is particle swarm optimization?	201
Optimization problems: A slightly more technical perspective	204
Problems that PSO algorithms can solve	208
Representing state: What do particles look like?	210
PSO algorithm life cycle	211
Use cases for PSO algorithms	234
8 Machine learning	239
.....	
What is machine learning?	239
Problems that machine learning can solve	242
Following a machine-learning workflow	244
Classification with decision trees	269
Other popular machine learning algorithms	289
Use cases for machine learning algorithms	290

9 Artificial neural networks 293

What are artificial neural networks?	293
The Perceptron: A representation of a neuron	297
Defining ANNs	302
Forward propagation: Using a trained ANN	309
Backpropagation: Training an ANN	317
Options for activation functions	330
Designing ANNs	332
Expressing ANNs mathematically	336
ANN types and use cases	341

10 Reinforcement learning 347

What is reinforcement learning?	347
The inspiration for reinforcement learning	349
Problems that reinforcement learning can solve	352
The life cycle of reinforcement learning	353
Deep learning approaches to reinforcement learning	375
Use cases for reinforcement learning	383

11 Large language models 387

What are LLMs?	387
The intuition behind language prediction	389
Prepare the training data	394
Encoding: From text to numbers	401
Encoding: Creating trainable embeddings	416
Self-attention: Start training the LLM	425
Decoding: Finding meaning through neural networks	440
Control the LLM	454
Refining LLMs with reinforcement learning	459

LLMs and Mixture of Experts	460
LLMs and retrieval-augmented generation	460
Use cases for LLMs	461
12 Generative image models	467
.....	
What are generative image models?	467
The intuition behind image generation	470
A generative image model training workflow	472
Prepare the image training data	473
Embedding: From images to numbers	477
Design the architecture	491
Denoise: From numbers to an image	502
Train: Calculate loss and backpropagation	529
Generating an image	533
Controlling the diffusion model	540
Refining aesthetics with human feedback	546
Use cases for image generation	547
index	551
