Contributors.....	xxi
About the editors.....	xxix
Foreword.....	xxxiii
Preface	xxxv

SECTION 1 Introduction

CHAPTER 1 Foams, aerogels and hydrogels: The state of the art and prospective technologies..... 3

*Lakshmipriya Ravindran, Ankitha Menon,
K.T. Mohammed Kenz, Sari P. Sasidharan,
M.S. Sreekala and Prasanth Raghavan*

1.1 Introduction.....	3
1.2 Synthesis of foams.....	6
1.3 Synthesis of aerogels	10
1.3.1 Supercritical drying	10
1.4 Synthesis of hydrogels	11
1.4.1 Bulk polymerization	11
1.4.2 Solution polymerization/cross-linking	12
1.4.3 Suspension polymerization or inverse-suspension polymerization.....	12
1.5 Conclusions.....	13
References.....	13

CHAPTER 2 Opportunities and versatile applications of thermoset foams, aerogels, and hydrogels: Current state of the art and anticipated developments..... 15

*Lakshmipriya Ravindran, Ankitha Menon, Ananthakrishnan
Pacheeri, Pranav Sreeram, Sari P. Sasidharan,
M.S. Sreekala and Prasanth Raghavan*

2.1 Introduction.....	16
2.2 Classifications and applications.....	18
2.2.1 Foams	18
2.2.2 Aerogels	27
2.2.3 Hydrogels	31
2.3 Challenges and future outlook	35
2.4 Conclusions.....	36
References.....	36

CHAPTER 3 Environmental impact and recycling technologies of thermoset resin, foams, aerogels and hydrogels.....43

*Ankitha Menon, Anagha Vinod, Pranav Sreeram,
Ananthakrishnan Pacheeri, P.K. Akhilesh, Vidhukrishnan
Naiker, Sari P. Sasidharan and Prasanth Raghavan*

3.1	Introduction: Thermoset polymers	43
3.2	Development of thermosets with inherent recyclability.....	47
3.3	Stimuli-triggered degradable thermosets	48
3.4	Recyclable thermosets containing dynamic covalent networks	49
3.5	Polymer foam	49
3.6	Environmental degradation of polyurethane foams	53
3.7	Aerogels	54
3.8	Environmental benefits of aerogels	55
3.9	Hydrogels	57
3.10	Conclusion	58
	References.....	59

SECTION 2 Polyurethane-based foams, aerogels, and hydrogels

CHAPTER 4 Polyurethane (PU): Structure, properties, and applications.....67

*Ankitha Menon, Pranav Sreeram, Anagha Vinod,
Vidhukrishnan Naiker, M.V. Nandana, Deepthi Anna David,
Sari P. Sasidharan and Prasanth Raghavan*

4.1	Introduction.....	68
4.2	Chemistry of polyurethanes and synthesis.....	69
	4.2.1 Isocyanates.....	69
	4.2.2 Polyols.....	71
	4.2.3 Chain extenders or cross-linkers.....	73
	4.2.4 Catalysts.....	74
	4.2.5 Surfactants	74
	4.2.6 Preparation of polyurethanes	74
4.3	Types of polyurethanes foams and properties	76
	4.3.1 Flexible polyurethane foams.....	76
	4.3.2 Rigid polyurethane foams	77
	4.3.3 Thermoplastic polyurethanes.....	78
	4.3.4 Polyurethane ionomers.....	79
	4.3.5 Waterborne polyurethanes.....	80
	4.3.6 Polyurethane elastomers	81

4.4	Advances in polyurethane synthesis.....	82
4.4.1	Click chemistry.....	82
4.4.2	Nitrogen and phosphorous containing polyurethanes.....	83
4.4.3	Carbon and nanomaterial-based polyurethanes.....	83
4.4.4	Green alternatives.....	84
4.5	Recycling methodologies of PU.....	85
4.6	Major applications of polyurethanes	88
4.6.1	Coatings, adhesives, sealants and elastomers (case) industry	88
4.6.2	Biomedical applications	89
4.6.3	Automotive industry	89
4.6.4	Marine applications	89
4.6.5	Appliances, flooring, and packaging applications	90
4.7	Conclusion.....	90
	References.....	91
CHAPTER 5	Polyurethane foam: The foaming process and the effect of process parameters on properties	93
	<i>Hima Haridevan, Athanasia A. Septevani, David A.C. Evans, Darren J. Martin and Pratheep K. Annamalai</i>	
5.1	Introduction.....	94
5.1.1	Key properties of RPUF	95
5.2	Principles of foam formation.....	97
5.2.1	The chemistry of RPUF.....	97
5.2.2	Formation of the cellular structure of RPUF.....	100
5.3	Selection of raw materials and process parameters for RPUF.....	101
5.3.1	Chemical process parameters.....	102
5.3.2	Physical process parameters	108
5.4	Manufacturing	108
5.4.1	Hand mixing	108
5.4.2	Foam production by machine	111
5.5	Trouble shooting RPUF production	113
5.6	Conclusion.....	114
	References.....	115
CHAPTER 6	Polyurethane nanocomposite foams: Preparation, properties and applications.....	119
	<i>Ayesha Kausar</i>	
6.1	Introduction.....	119
6.2	Polyurethane.....	120

6.3	Polyurethane foaming	121
6.4	Polyurethane nanocomposite foam: Preparation and properties.....	121
6.4.1	Polyurethane/graphene nanocomposite foam	121
6.4.2	Polyurethane/carbon nanotube nanocomposite foam	123
6.5	Application areas of polyurethane nanocomposite foam	127
6.5.1	Shape memory property.....	127
6.5.2	EMI shielding.....	129
6.5.3	Ecofriendly polyurethane foam.....	130
6.5.4	Automotive polyurethane foam.....	130
6.5.5	Biomedical relevance.....	131
6.6	Future and summary	132
	References.....	132
CHAPTER 7	Polyurethane based hydrogels synthesis, properties, and modifications	143
	<i>I. Díez-García, J. Vadillo, C. Derail, A. Tercjak and A. Eceiza</i>	
7.1	Introduction.....	144
7.2	Polyurethane hydrogels obtained by incorporation of components for physical crosslinking.....	148
7.2.1	Introduction.....	148
7.2.2	Preparation of hydrogels by addition of SA and divalent cations.....	149
7.2.3	Characterization of hydrogels prepared by addition of SA and divalent cations	151
7.3	Polyurethane nanocomposite hydrogels	155
7.3.1	Introduction.....	155
7.3.2	Nanocomposite hydrogels by addition of TiO ₂ nanoparticles	157
7.3.3	Nanocomposite hydrogels by addition of cellulose nanocrystals	162
7.4	Conclusions.....	167
	References.....	167
CHAPTER 8	Polyurethane-based aerogels: Preparation, properties, and applications.....	173
	<i>Marcin W och</i>	
8.1	Introduction.....	173
8.2	Polyurethanes as diversified group of polymeric materials.....	174

8.3 Polyurethane aerogels: Preparation, characterization, and applications.....	175
8.4 Conclusions.....	189
References.....	189
CHAPTER 9 Shape memory polyurethane-based foams and aerogels	193
<i>Chinju Jacob, Mathew Kuruvilla, Vidhukrishnan Naiker and Prasanth Raghavan</i>	
9.1 Introduction.....	194
9.2 Classification of SMPs	194
9.3 Mechanism of shape memory polymers (SMPs).....	196
9.3.1 Mechanism in amorphous SMPs.....	197
9.3.2 Shape memory mechanism in crystalline SMP	197
9.4 Shape memory polymer composites (SMPCs)	197
9.5 Advancement in shape memory polymers.....	200
9.6 Shape memory polyurethane.....	201
9.6.1 Shape memory polyurethane foam	203
9.6.2 Synthesis of shape memory polyurethane foam	204
9.7 Characterization of shape memory polyurethane foam	207
9.7.1 Tensile property	207
9.7.2 Density and porosity	208
9.7.3 Cell morphology	209
9.7.4 Thermal characterization	209
9.7.5 Dynamic thermomechanical characterization.....	210
9.7.6 Shape memory property.....	210
9.8 Modifications and recent progress in shape memory polyurethane foam.....	211
9.9 Applications of SMPU foams	213
9.9.1 Aneurysm	213
9.9.2 Tissue reconstruction	214
9.10 Conclusion.....	215
References.....	216
CHAPTER 10 Challenges in design, processing and use of PU foam/aerogel materials	223
<i>Zunaida Zakaria, Firuz Zainuddin and Du Ngoc Uy Lan</i>	
10.1 Introduction.....	224
10.2 Challenges in design, processing and use of PU foam.....	225
10.2.1 Challenges of human and environmentally friendly materials for production of PU foams.....	225

10.2.2	Challenges in production process of PU foams	226
10.2.3	Challenges in design/processing to obtain low energy consumption and less CO ₂ emissions	230
10.2.4	Challenges in safety, stability usage, and disposal after usage.....	230
10.3	Challenges in design, processing and use of PU aerogel.....	232
10.3.1	Challenges in technology and productivity of PU aerogel.....	233
10.3.2	Challenges in design of parameter and performance of PU aerogel.....	234
10.4	Future opportunities/perspective in PU foam and PU aerogel	237
10.4.1	PU from renewable resources	237
10.4.2	Biodegradable PU.....	239
10.4.3	PU aerogel in electronic application.....	240
10.5	Conclusion	240
	References.....	241

SECTION 3 Epoxy-based foams, aerogels, and hydrogels

CHAPTER 11	Epoxy resins: Synthesis, structure, and properties.....	251
	<i>Reeba Mary Cherian, T.G. Unnikrishnan, Maria Cherian, Jithin Joy, Cintil Jose Chirayil, K. Panneerselvam and Sabu Thomas</i>	
11.1	Epoxy resin: Thermosetting resins or thermosets.....	252
11.2	Synthesis of epoxy compounds	253
11.2.1	Synthesis of epoxy resins from halohydrins	255
11.2.2	Bisphenol-A epoxy resins.....	255
11.2.3	Novolac epoxy resins.....	258
11.2.4	Biobased epoxy resins	260
11.2.5	Cycloaliphatic epoxy resins	261
11.2.6	Trifunctional epoxy resin.....	263
11.2.7	Tetrafunctional epoxy resins	263
11.2.8	Fluorine-containing epoxy resin.....	265
11.2.9	Phosphorous containing epoxy resins.....	266
11.2.10	Silicon containing epoxy resins	268
11.3	Curing process	270
11.3.1	Coreactive curing agents.....	271
11.3.2	Catalytic curing agents	275
11.3.3	Room temperature curing.....	275

11.3.4 Heat curing.....	275
11.3.5 Photo-curing.....	275
11.4 Properties of epoxy resins	276
11.5 Properties of epoxy based composites	276
11.6 Applications of epoxy composites	278
11.7 Conclusions and future perspectives.....	278
References.....	279
 CHAPTER 12 Epoxy-based hydrogels: Network design, characterization, and applications.....	 287
<i>Masihullah Jabarulla Khan and Russell John Varley</i>	
12.1 Introduction.....	287
12.2 Epoxy hydrogels	288
12.3 Strong and tough epoxy hydrogels.....	293
12.4 Morphology/network structure of epoxy hydrogels.....	296
12.5 Conclusion and future outlook	301
References.....	302
 CHAPTER 13 Epoxy: Foaming processes and the effect of process parameters on properties of epoxy foam.....	 305
<i>Niranjana Jaya Prakash and Balasubramanian Kandasubramanian</i>	
13.1 Introduction.....	305
13.2 Basics of foaming process.....	307
13.3 Various foaming techniques for preparation of epoxy foams	308
13.3.1 Chemical foaming	308
13.3.2 Physical foaming.....	310
13.3.3 Using low boiling solutions.....	310
13.3.4 Microsphere expansion.....	311
13.3.5 Solid-state foaming.....	313
13.3.6 Microwave foaming	313
13.4 Effect of process parameters on the properties of the epoxy foams	314
13.4.1 Cell structure and morphology	314
13.4.2 Dielectric constant.....	316
13.4.3 Flexural properties	318
13.4.4 Fracture toughness.....	318
13.4.5 Tensile strength.....	319
13.4.6 Compressive strength and modulus.....	321
13.4.7 Impact strength	323
13.5 Conclusion	323
References.....	324

CHAPTER 14 Epoxy foams reinforcing with nanomaterials: Synthesis, mechanical properties and applications..... 327

Niloofar Rastegar, Reihaneh Jamshidi and Amir Ershad-Langroudi

14.1	Introduction.....	327
14.2	Synthesis.....	328
14.2.1	Syntactic foams.....	328
14.2.2	Conventional foams	336
14.3	Mechanical properties	344
14.3.1	Mechanical properties of syntactic foams.....	344
14.3.2	Mechanical properties of conventional foams	350
14.4	Applications of epoxy foams	355
14.4.1	Syntactic foam applications.....	355
14.4.2	Conventional foam applications.....	356
14.5	Conclusion	358
	References.....	359

CHAPTER 15 Shape memory epoxy foam-defense and aerospace applications..... 367

T.G. Unnikrishnan, Umang Dubey, S. Mohan, Jithin Joy, Cintil Jose Chirayil and K. Panneerselvam

15.1	Introduction.....	367
15.2	Shape memory epoxy foams.....	369
15.3	Aerospace applications	371
15.4	Defense applications	373
15.5	Challenges and future scope	375
15.6	Conclusions.....	376
	References.....	377

SECTION 4 Formaldehyde-based foams, aerogels, and hydrogels

CHAPTER 16 Phenolic resin: Preparation, structure, properties, and applications..... 383

Joel K. Joseph, Vidhukrishnan Naiker, Pranav Sreeram, Farsana Mampulliyalil, P.J. George Varghese, Pritam V. Dhawale, Sari P. Sasidharan, Vijay Kumar Thakur and Prasanth Raghavan

16.1	Introduction.....	384
16.2	Chemistry of phenolic resin and synthesis.....	384

16.2.1 Raw materials	384
16.3 Types of phenolic resins	389
16.3.1 Novolac	389
16.3.2 Resol.....	390
16.3.3 Green synthesis of phenol-formaldehyde resin	391
16.4 Cross-linking	400
16.5 Resin manufacturing process	402
16.5.1 Novolac production.....	403
16.5.2 Resol production	405
16.6 Resin compounding and processing	405
16.6.1 Hardeners.....	405
16.6.2 Fillers.....	406
16.6.3 Lubricating agents	407
16.6.4 Flame retardant.....	407
16.6.5 Tougheners.....	407
16.7 Properties of phenolic resin	408
16.8 Phenolic moldings	409
16.9 Application of phenol-formaldehyde resin.....	410
16.9.1 Phenolic resin: In wood composites.....	410
16.9.2 Phenolic resin: In insulating material	411
16.9.3 Phenolic resin: In molding applications	412
16.9.4 Phenolic resin: In coating applications.....	413
16.9.5 Phenolic resin: In laminating applications.....	413
16.10 Conclusion	414
References.....	414

CHAPTER 17 Phenolic foams: Foaming processes and applications..... 421

Hossein Bagheri Ziarati and Mohammad Fasihi

17.1 Introduction.....	421
17.2 Phenolic foams	422
17.3 Phenolic foam formulation.....	422
17.3.1 Resin.....	423
17.3.2 Blowing agent.....	423
17.3.3 Surfactant.....	425
17.3.4 Acid catalyst.....	425
17.4 Manufacturing phenolic foam process	425
17.5 Phenolic foam applications.....	428
17.5.1 Floral foams	428
17.5.2 Insulation foams.....	429
17.5.3 Orthopedic foam.....	431
17.5.4 Mining foam.....	431

17.6	Optimization of formulation and processing conditions for phenolic foams.....	433
17.7	Conclusions.....	438
	References.....	438
CHAPTER 18	Phenolic foams: Structure—property relationships and insulating properties.....	443
	<i>T. Ge, K. Tang and X. He</i>	
18.1	Introduction.....	443
18.2	Factors affecting the properties of phenolic foam.....	444
18.2.1	Resin matrix.....	444
18.2.2	Foaming additives.....	446
18.2.3	Cell structure.....	447
18.3	Modified phenolic foam.....	448
18.3.1	Modification method.....	448
18.3.2	Physical modifiers.....	449
18.3.3	Chemical modifiers.....	450
18.4	Phenolic foam structure: Property relationships.....	452
18.4.1	Insulating.....	452
18.4.2	Toughness.....	454
18.4.3	Flame retardant.....	455
18.4.4	Heat and aging resistance.....	456
18.5	Conclusion.....	456
	References.....	456
CHAPTER 19	Phenolic aerogels: Preparation, properties, and applications.....	459
	<i>Haiming Cheng, Changqing Hong and Xinghong Zhang</i>	
19.1	Introduction.....	459
19.2	Preparation of phenolic aerogels.....	460
19.2.1	Preparation of phenolic aerogels.....	460
19.2.2	Preparation of silica/phenolic composite aerogels.....	462
19.2.3	Preparation of fabric/phenolic aerogel nanocomposite.....	463
19.3	Properties of phenolic aerogels.....	463
19.3.1	Pore structure.....	464
19.3.2	Chemical state.....	466
19.3.3	Thermal stability and degradation behavior.....	467
19.3.4	Mechanical properties.....	469
19.3.5	Thermal insulation properties.....	470

19.4 Applications of phenolic aerogels and their nanocomposites.....	471
19.4.1 Precursor for carbon aerogels.....	471
19.4.2 Thermal insulation.....	471
19.4.3 Ablation materials	472
19.5 Conclusions.....	474
References.....	474
CHAPTER 20 Phenolic foams reinforced with nanomaterials: Preparation, properties, and applications	477
<i>Jomin Thomas, Vidhukrishnan Naiker, Farsana Mampulliyalil, Deepthi Anna David, Joel K. Joseph, P.J. George Varghese, P.K. Akhilesh, Vijay Kumar Thakur and Prasanth Raghavan</i>	
20.1 Introduction.....	478
20.2 Chemistry	479
20.2.1 Graphene oxide and their hybrid nanoparticles.....	481
20.2.2 Multiwalled carbon nanotubes (MWCNTS).....	485
20.2.3 Titanium nitride (TiN) nanoparticles	487
20.2.4 Silica nanoparticles.....	490
20.2.5 Lignin nanoparticles.....	492
20.2.6 Miscellaneous nanoparticles	493
20.3 Critical factors	497
20.4 Conclusion	500
References.....	503
CHAPTER 21 Melamine-formaldehyde hydrogels, foams, and aerogels: Preparation, properties and applications.....	505
<i>Abdullah Khan, Carlos Leon Y. Leon, Deepthi Anna David, Ananthakrishnan Pacheer, Pranav Sreeram, K.T. Mohammed Kenz, Prasanth Raghavan and Peter Samora Owuor</i>	
21.1 Introduction.....	506
21.2 Melamine based hydrogels.....	506
21.2.1 Properties of melamine-based hydrogels.....	506
21.2.2 Synthesis of melamine-formaldehyde resin hydrogels	509
21.3 Melamine-formaldehyde resins based foams.....	509
21.3.1 Typical properties of melamine-formaldehyde foams	512
21.3.2 Synthesis of melamine formaldehyde foam	513
21.4 Melamine-formaldehyde based aerogels	515

21.4.1	Synthesis of melamine-formaldehyde aerogels.....	515
21.4.2	Properties of melamine-formaldehyde aerogels.....	519
21.5	Applications of MF hydrogels, foams, and aerogels.....	523
21.6	Conclusion	526
	References.....	527
CHAPTER 22	Urea formaldehyde foams, aerogels and hydrogels: Preparation, properties and applications.....	533
	<i>Deepthi Anna David, Peter Samora Owuor, K.T. Mohammed Kenz, Ananthakrishnan Pacheeri, Pranav Sreeram, Sari P. Sasidharan, P.M. Sabura Begum and Prasanth Raghavan</i>	
22.1	Introduction.....	534
22.2	Synthesis of urea, formaldehyde, and urea formaldehyde resin.....	534
22.2.1	Urea.....	534
22.2.2	Formaldehyde	535
22.3	Urea formaldehyde resin.....	536
22.4	Urea formaldehyde foams	537
22.4.1	Preparation of urea formaldehyde foams.....	537
22.4.2	Properties of urea formaldehyde foams (UFF)	538
22.5	Urea formaldehyde-based hydrogels (UFH)	543
22.5.1	Preparation of urea formaldehyde hydrogels.....	543
22.5.2	Properties of urea formaldehyde hydrogels.....	544
22.6	Urea formaldehyde based aerogels (UFA).....	544
22.7	Applications of urea formaldehyde based foams, aerogels, and hydrogels	546
22.8	Toxicology of formaldehyde.....	546
22.9	Conclusion and future outlook.....	549
	References.....	549
CHAPTER 23	Carbon foams derived from thermosetting polymers: Preparation, properties and applications	553
	<i>Vidhukrishnan Naiker, Pranav Sreeram, Abhilash Pullanchiyodan, Sari P. Sasidharan, Sumit Mishra, Alexandru Vald, Prasanth Raghavan and M.S. Manju</i>	
23.1	Introduction.....	554
23.2	Thermosetting polymers for carbon foam.....	556
23.2.1	Epoxy resins.....	556
23.2.2	Extraction of tannin	561
23.3	Carbon foam structure, synthesis, and application	563

23.3.1	Structure of carbon foam	564
23.3.2	Methods of synthesis.....	565
23.3.3	Characterization, properties, and application.....	568
23.4	Conclusion	573
	References.....	574
CHAPTER 24	Carbon foams derived from phenol and melamine formaldehyde thermosetting polymers: Preparation, properties, and applications.....	583
	<i>Pranav Sreeram, Vidhukrishnan Naiker, Deepthi Anna David, Jomin Thomas, Sari P. Sasidharan, M.S. Manju, Sumit Mishra, Abhilash Pullanchiyodan and Prasanth Raghavan</i>	
24.1	Introduction.....	584
24.2	Method of synthesis.....	587
24.2.1	Carbon foam from phenol formaldehyde.....	587
24.2.2	Carbon foams from phenolics in combination with other polymers	590
24.2.3	Carbon foam from melamine formaldehyde	592
24.3	Conclusion	599
	References.....	599
CHAPTER 25	Carbon foams derived from thermosetting epoxy, polyimides and cellulosic polymers: Environmental and electrical or electrochemical applications.....	603
	<i>Pranav Sreeram, Vidhukrishnan Naiker, Deepthi Anna David, Sari P. Sasidharan, Farsana Mampulliyalil, Alexandru Vald, M.S. Manju, Sumit Mishra, Abhilash Pullanchiyodan and Prasanth Raghavan</i>	
25.1	Introduction.....	604
25.2	Carbon foams from epoxy, polyimide, and cellulosic polymers.....	605
25.2.1	Carbon foam from epoxy resin.....	605
25.2.2	Carbon foam from polyimide.....	607
25.2.3	Carbon foam from lignin	607
25.2.4	Carbon foam from cellulosic polymers.....	614
25.3	Conclusion	625
	References.....	626
	Index.....	631
