<i>Preface</i>	xxvii

1. Alternative strategies to synthetic chemical fertilizers: revitalization of soil quality for sustainable agriculture using organic-based approaches 1

Waleed Asghar, Muhittin Onur Akça, Hanife Akça, Ommolbanin Jafari Tarf, Ryota Kataoka and Oğuz Can Turgay

1.1 Introduction	1
1.2 Green manure for the revitalization of soil quality	2
1.3 Organic compost for the revitalization of soil quality	4
1.4 Biochar for the revitalization of soil quality	7
1.4.1 What is biochar?	7
1.5 Effects of biochar on the nutrient availability in soil	8
1.6 Effects of biochar on soil quality	8
1.7 Microbial carrier of biochar	9
1.8 Use of biochar for remediation in agricultural soils	12
1.9 Uncertainties of biochar	13
1.10 Future prospects of biochar use in agricultural soils	13
1.11 Organo-mineral fertilizers: past, present, and future	13
1.11.1 What is an organo-mineral fertilizer?	13
1.12 Effects of organo-mineral fertilizers on soil productivity	14
1.13 Effects of organo-mineral fertilizers on plant growth and plant nutrient use efficiency	15
1.14 Role of organo-mineral fertilizers in sustainable agriculture	16
1.15 Bio-fertilizers	17
1.16 Future perspectives of bio-fertilizers	19
References	20

2. Application of biostimulants to improve agronomic and physiological responses of plants: a review 31

Monireh Mones Sardrodi, Zahra Biglari, Zahra Dehghanian, Khosro Balilashaki, Behnam Asgari Lajayer and Tess Astatkie

2.1 Introduction	31
2.2 The response of plants to biostimulant elements	32
2.3 Biostimulants: definitions and classifications	34

2.4	Biostimulant origins	35
2.5	Factors of biostimulants on growth	36
2.6	The efficiency of biostimulants on the chemical composition	37
2.7	Biostimulant use on vegetable crops	39
2.8	Conclusions	40
	References	41
3.	Green nanotechnology: a paradigm, panacea and new perspective for sustainable agriculture	45
	Chandra Muktesh, Singh Shiwani and Mishra Bhawana	
3.1	Introduction	45
3.1.1	Background	45
3.1.2	Green nanotechnology	46
3.1.3	Nanomaterials or nanoparticles	48
3.1.4	Brief description of green synthesis of nanomaterial and characterization	48
3.1.5	Overview of engineered nanomaterials	49
3.1.6	Classification of nanomaterials	54
3.1.7	Factors affecting the effect of engineered nanomaterials	55
3.2	Review literature and recent developments	56
3.2.1	Occurrence of nanomaterial in a living system	56
3.2.2	Occurrence of nanomaterial in the agriculture system	56
3.2.3	Uptake and translocation mechanism of nanoparticles in plants	57
3.2.4	Phytotoxicity of engineered nanomaterials	59
3.2.5	Green nanotechnology approach for sustainable agriculture	59
3.2.6	Green nanotechnology approaches in other sectors	69
3.3	Conclusion and future prospects	71
	References	72
4.	Feasibility and challenges of biopesticides application	83
	Alaa El Din Mahmoud, Manal Fawzy and Mohamed Hosny	
4.1	Introduction	83
4.2	Biopesticides	84
4.2.1	Microbial biopesticides	85
4.2.2	Plant-incorporated protectants	87
4.2.3	Biochemical pesticides	87
4.3	Merits and disadvantages of biopesticides	87
4.4	Role of biopesticides	88
4.5	Application of biopesticides	88
4.6	Commercialization of biopesticides	92
4.7	Conclusion and recommendations	93

Acknowledgments	94
References	94
5. How the soil nitrogen nutrient promotes plant growth—a critical assessment	99
Ankita Singh, Akash Hidangmayum, Pushpendra Tiwari, Vivek kumar, Bansh Narayan Singh and Padmanabh Dwivedi	
5.1 Introduction	99
5.1.1 One-to-one care for soil N controlling	101
5.1.2 Status of N concentration in planting soil	102
5.1.3 N mineralization and immobilization from soil organic matter	102
5.1.4 Is microbe helping in plant nitrogen acquisition?	104
5.1.5 Nitrogen uptake and assimilation in plants	108
5.1.6 N localization in plants	108
5.1.7 Crosstalk of N, NO, and N transporters	109
5.1.8 Approaches for improved N fertilization	111
5.1.9 Soil nitrogen management through agronomic cropping practice nitrogen	111
5.2 Conclusion	113
References	113
6. Morphological and phytochemical changes of <i>Cannabis sativa</i> L. affected by light spectra	119
Mehdi Babaei, Ladan Ajdanian and Behnam Asgari Lajayer	
6.1 Introduction	119
6.2 Secondary metabolites in cannabis	120
6.3 Biosynthesis pathway of cannabinoids	122
6.4 How to analyze and measure the amount of cannabinoids in the plant	124
6.5 The importance of light spectra in plant cultivation	124
6.6 Examining the effects of light spectra on cannabis	126
6.6.1 Morphological characteristics	126
6.6.2 Phytochemical characteristics	129
6.7 Conclusion	130
References	130
7. Application of phosphite as a biostimulant in agriculture	135
Fernando Carlos Gómez-Merino, Libia Fernanda Gómez-Trejo, Rubén Ruvalcaba-Ramírez and Libia Iris Trejo-Téllez	
7.1 Introduction	135
7.2 Chemistry of Phi and its metabolism in plants	136
7.3 Phosphite as a biostimulant in agriculture	138

7.4	Cereal and pulse crops	139
7.5	Fruits	144
7.6	Vegetables	144
7.7	Other food crops	146
7.8	Beyond agricultural applications of Phi: biotechnological and industrial usage	146
7.9	Conclusion and prospects	147
	References	148
8.	Sustainable mainframes for control of Sugarcane early shoot borer, <i>Chilo infuscatellus</i> (Snellen)	155
	S.A. Dwivedi, Lelika Nameirakpam and Ajay Tomer	
8.1	Introduction	155
8.2	Biology of early shoot borer on sugarcane	158
8.2.1	Embryonic development	159
8.2.2	Larval development	159
8.2.3	The external appearance of pupa form	160
8.2.4	Description and morph metrics of adult	162
8.3	Integrated pest management for early shoot borer, <i>Chilo infuscatellus</i>	162
8.4	Design making stage for early shoot borer	163
8.5	Role of soil nutrients on the incidence of <i>Chilo infuscatellus</i> on sugarcane varieties	164
8.6	Utilization of eggs parasitoid	165
8.7	Genotype X role of climatic factors in under irrigation condition in sugarcane at advanced screening stages	165
8.8	Adumbrate the molecular markers character of sugarcane forming resistance against early shoot borer	167
8.9	Application of Pheromone traps techniques	167
8.10	In vitro bioassay to determine the toxicity of cry 1f protein effective against <i>Chilo Infuscatellus</i>	170
8.11	Synthesize Bt genes effective in the management of early shoot borer	171
8.12	Effect of granulosis virus on early shoot borer	172
8.13	Conclusions	172
	References	173
9.	Levulinic acid: a potent green chemical in sustainable agriculture	179
	Protha Biswas, Samapika Nandy, Devendra Kumar Pandey, Joginder Singh and Abhijit Dey	
9.1	Introduction	179
9.2	Levulinic acid: will it replace fossil fuels?	180
9.3	Chemical and physical properties	180
9.4	Application of levulinic acid and its derivatives	181
9.4.1	Fuel or fuel additives	182

9.4.2	Pharmaceuticals and medicines	183
9.4.3	Food additives and preservatives	183
9.4.4	Resin and adhesives	183
9.4.5	Solvent	183
9.4.6	Other uses of levulinic acid in product preparations	184
9.5	Industrially important derivatives of levulinic acid, applications, and synthesis	184
9.5.1	Diphenolic acids	185
9.5.2	Δ -Aminolevulinic acid	186
9.5.3	2-Methyltetrahydrofuran	186
9.5.4	γ -Valerolactone	187
9.5.5	Succinic acid	187
9.5.6	Pyrrolidones	188
9.5.7	Levulinic ketals	189
9.5.8	Levulinate esters	189
9.6	Synthesis of levulinic acid	190
9.6.1	Levulinic acid production from first-generation biomass	190
9.6.2	From the second generation of biomass	192
9.6.3	From other renewable resources	200
9.6.4	The third generation of biomass	200
9.7	Different processes for levulinic acid synthesis	201
9.7.1	Biofine process	201
9.7.2	Homogenous catalytic system	202
9.7.3	Heterogeneous catalytic system	203
9.7.4	Biphasic system	204
9.7.5	Ionic liquids system	205
9.7.6	Supercritical fluid system	206
9.8	Bottlenecks of levulinic acid production	206
9.9	Conclusion and future remarks	207
	References	208

10. Role of chitosan in eco-friendly management of plant diseases for sustainable agriculture **219**

Vallabhaneni Tilak Chowdary, SK Roshan Baba, Jagana Divya and P. Kishore Varma

10.1	Introduction	219
10.2	Sources of chitosan and its chemical structure	221
10.2.1	Chemical structure of chitosan	221
10.2.2	Sources of chitosan	221
10.3	Application of chitosan in plant growth promotion and yield improvement	223
10.4	Application of chitosan in plant protection	223
10.5	Mode of action	226

10.5.1	Mode of action of antimicrobial activity	231
10.6	Factors affecting chitosan activity	232
10.6.1	Microbial factors	233
10.6.2	Intrinsic factors of chitosan	233
10.6.3	Physical state	235
10.6.4	Environmental factors	235
10.7	Conclusion	236
	References	237
11.	Role of trehalose in plant–rhizobia interaction and induced abiotic stress tolerance	245
	Abhishek Bharti, Hemant Singh Maheshwari, Dipanti Chourasiya, Anil Prakash and Mahaveer Prasad Sharma	
11.1	Introduction	245
11.1.1	Trehalose—an abiotic stress protectant metabolite in rhizobia	246
11.1.2	Trehalose—an abiotic stress protectants metabolite in plants	247
11.2	Trehalose biosynthesis pathways in microorganisms and plants	248
11.2.1	Pathways of trehalose biosynthesis	248
11.2.2	Trehalase enzyme: trehalose catabolic enzyme	250
11.3	Genetic modification of plants and microorganisms for higher trehalose biosynthesis and external amendments of trehalose for abiotic stress alleviation	251
11.4	Role of trehalose in microbial protection from abiotic stress	253
11.5	Role of trehalose in <i>Rhizobium</i> -legume symbiosis and abiotic stress tolerance	254
11.6	Use of trehalose in seed priming, improved shelf life, preservation, and maintenance of microbial strains	256
11.7	Conclusion and future prospects	258
	Acknowledgments	258
	References	258
12.	Combinative effect of seed priming with plant growth-promoting rhizobacteria and green chemicals on plant growth and stress tolerance	265
	Manmeet Kaur and Harpreet Singh Sodhi	
12.1	Introduction	265
12.2	Biopriming	267
12.3	Mechanism of priming	267
12.4	Molecular, biochemical, and physiological changes in seeds on priming	268
12.5	Recent strategies and operators of seed priming	271
12.5.1	Hydropriming	271
12.5.2	Halopriming	271

12.5.3	Osmohardening	271
12.5.4	Matrix priming	273
12.5.5	On-farm priming	273
12.5.6	Hormone enhancer priming	273
12.5.7	Micronutrient seed priming	273
12.5.8	Chemical priming	274
12.5.9	Nanoparticle priming	275
12.6	The potential of green chemicals seed priming synthesized with nanoparticles to promote plant growth	275
12.7	Components influencing the seed priming process	276
12.8	Essentiality of biopriming in stress forbearance	277
12.9	Role of biopriming against abiotic stress	277
12.10	Modes of plant growth-promoting rhizobacteria interceded drought and salt stress resilience	278
12.11	Beneficial effects of seed priming	282
12.12	Conclusion and future prospects	282
	References	283
13.	Burgeoning trends using green chemicals to impede the obliterating invasive insects	289
	B.L. Manisha, N. Ramana, T. Hemadri, M. Ramaiah, P. Kishore Varma and C.S. Jayaram	
13.1	Introduction	289
13.2	Future prospects and conclusions	307
	References	308
14.	Routing microbial biosurfactants to agriculture for revitalization of soil and plant growth	313
	Seema Sangwan, Harpreet Kaur, Pankaj Sharma, Meena Sindhu and Leela Wati	
14.1	Introduction	313
14.2	Mechanisms of action of surfactant molecules on surfaces and interfaces	315
14.3	Possible applications and environmental toxicity	315
14.4	The surfactants of biological origin	317
14.5	Microorganisms involved in the production of biosurfactants	319
14.6	Production and extraction of microbial biosurfactants	320
14.7	Biosurfactants as a possible stimulant in agriculture	322
14.8	Seed germination and plant growth enhancement	323
14.9	Biosurfactants in nutrient mobilization	325
14.10	Biosurfactants as biocontrol agents	327
14.11	Conclusion and future prospects	332
	References	332

15. Nanopriming in sustainable agriculture: recent advances, emerging challenges and future prospective	339
Basant Kumar, Indu, Rajesh Kumar Singhal, Subhash Chand, Jyoti Chauhan, Vivek Kumar, Udit Nandan Mishra, Akash Hidangmayum, Ankita Singh and Bandana Bose	
15.1 Introduction	339
15.2 Nanotechnology in agricultural sustainability	340
15.3 Seed priming and its implications in agriculture	342
15.4 Nanopriming	343
15.5 The mechanism underlying the nanopriming of seeds	345
15.5.1 Mechanism of nanoparticles uptake during seed germination	345
15.5.2 Role of reactive oxygen species and phytohormones during germination using nanoprimed seeds	346
15.6 Influences of nanopriming at different plant growth stages	347
15.6.1 Germination stage	347
15.6.2 Vegetative stage	347
15.6.3 Reproductive stage	348
15.7 Nanopriming in improving various abiotic and biotic stresses	349
15.7.1 Drought stress	352
15.7.2 Salinity stress	352
15.7.3 Heavy metal stress	353
15.7.4 Nanopriming for improving biotic stress conditions	355
15.8 Other implications of nanopriming for improving sustainability	357
15.9 Summary	358
References	358
 16. Toxicological assessment of biobased products: trends and challenges	 367
Natalia Klanovicz, Aline Frumi Camargo, Charline Bonatto, Fábio Spitz Stefanski, Andressa Warken, Letícia Paliga, Cristiane Funghetto Fuzinato and Helen Treichel	
16.1 Raw material for biobased products	367
16.1.1 Biomass	367
16.1.2 Enzymatic extracts	368
16.1.3 Microorganisms	370
16.1.4 Examples of biobased products	371
16.2 Toxicological aspects of the biobased products and its production chain	372
16.2.1 Upstream processes	372
16.2.2 Midstream processes	373
16.2.3 Downstream processes	376
16.3 Bioproducts toxicity assessment: approaches and results	377
16.5 The trends and challenges of toxicological assessment	384

17. Advance technology for biostimulants in agriculture	393
Ayush Bahuguna, Sachin Sharma, Ashish Rai, Reshu Bhardwaj, Sanjib Kumar Sahoo, Astha Pandey and Bharti Yadav	
17.1 Introduction	393
17.2 Different advanced technology for biostimulants	394
17.3 Nano biostimulant	394
17.3.1 Nanosilver	394
17.4 Mechanism of nanosilver particle	395
17.4.1 Agri-nano	395
17.5 Mechanism of agri-nanoproduct	395
17.6 Plant biostimulant	396
17.6.1 Amino acids	396
17.6.2 Sea weed	397
17.6.3 Chitosan	400
17.6.4 Protein hydrolysates	403
17.6.5 Microalgae	405
17.7 Humic substances	407
17.7.1 Mechanism of action of humic substances	408
17.7.2 Role of humic substances as biostimulant in plant	408
17.7.3 Method of application of humic substances	409
17.8 Conclusion	410
References	410
18. Chitin and chitosan as elicitors in sustainable production of medicinal crops	413
Tusheema Dutta, Samapika Nandy, Joginder Singh, Devendra Kumar Pandey and Abhijit Dey	
18.1 Introduction	413
18.2 Immune responses of medicinal plants	414
18.3 Inducing resistance in medicinal plants	416
18.3.1 Synthetic inducers	416
18.3.2 Microbial elicitors	416
18.4 Chitin and chitosan: the fungal elicitors	416
18.5 Mechanism of action of chitin and chitosan in medicinal plants	418
18.6 Applications of chitosan in enhanced production of therapeutics	419
18.7 Conclusion	421
Acknowledgements	423
