PART I The Cardiopulmonary System—The Essentials

1 The Anatomy and Physiology of the Respiratory System, 1

Introduction, 1
The Airways, 1
The Epithelial Tissue of the Upper and Lower Airways, 1
The Sites of Gas Exchange, 29
The Pulmonary Vascular System, 33
The Lymphatic System, 36
Control of the Lungs, 37
The Lungs, 40
The Mediastinum, 40
The Pleural Membranes, 40
The Thorax, 42
The Muscles of Ventilation, 42
Chapter Summary, 56

2 Mechanics of Ventilation, 59

Introduction, 59
The Atmospheric Measurement, 61
The Key Respiratory Anatomic Structures and Pressures—In and Around the Lungs—Associated With the Mechanisms of Ventilation, 63
How Pulmonary Pressures Correlate to Atmospheric Pressure, 65
The Role of Boyle's Law and the Pressure Gradients During a Normal Ventilatory Cycle, 66
The Key Measurable Pressures Associated with the Mechanics of Ventilation, 66
Other Pressure Relationships of Importance in the Respiratory System, 68
Inspiration, 70
End-Inspiration, 71
Expiration, 71
End-Expiration, 71
Elastic Properties of the Lung and Chest Wall, 75
Dynamic Characteristics of the Lungs, 91
Ventilatory Patterns, 99
How Normal Intra-Pleural Pressure Differences Cause Regional Differences in Normal Lung Ventilation, 104

The Effect of Airway Resistance and Lung Compliance on Ventilatory Patterns, 105
Overview of Specific Breathing Patterns, 106
Chapter Summary, 110

3 Pulmonary Function Measurements, 115

Introduction, 115
Lung Volumes and Capacities, 115
Pulmonary Mechanics, 118
Factors Affecting Predicted Normal Values, 125
How the Effects of Dynamic Compression Decrease Expiratory Flow Rates, 128
Chapter Summary, 132

4 The Diffusion of Pulmonary Gases, 137

Introduction, 137
Gas Diffusion—Pressure Gradients Versus Diffusion Gradients, 139
The Partial Pressures of Gases in the Air, Alveoli, and Blood, 139
The Ideal Alveolar Gas Equation, 140
The Diffusion of Pulmonary Gases, 141
Oxygen and Carbon Dioxide Diffusion Across the Alveolar-Capillary Membrane, 141
Gas Diffusion According to Fick's Law, 142
Perfusion-Limited Gas Flow, 146
Diffusion-Limited Gas Flow, 147
How Oxygen Can Be Either Perfusion or Diffusion Limited, 148
Chapter Summary, 153

5 The Anatomy and Physiology of the Circulatory System, 157

Introduction, 157
The Blood, 157
The Heart, 163
The Pulmonary and Systemic Vascular Systems, 169
Pressures in the Pulmonary and Systemic Vascular Systems, 173
The Cardiac Cycle and Its Effect on Blood Pressure, 174
The Distribution of Pulmonary Blood Flow, 175
Chapter Summary, 184

6 Oxygen and Carbon Dioxide Transport, 189

Introduction, 189
 The Role and Importance of Oxygen, 189
 Oxygen Transport, 190
 Oxyhemoglobin Dissociation Curve, 193
 Oxygen Transport Measurements, 199
 Oxygen Tension–Based Measurements, 199
 Hypoxia, 215
 Cyanosis, 218
 Carbon Dioxide Transport, 220
 Chapter Summary, 226

7 Acid–Base Balance and Regulation, 231

Introduction, 231
 Basic Principles of Acid–Base Reactions and pH, 232
 Chemical Buffer Systems and Acid–Base Balance, 233
 The Respiratory System and Acid–Base Balance, 235
 The Renal System and Acid–Base Balance, 236
 The Role of the $P_{CO_2}/HCO_3^-/pH$ Relationship in Acid–Base Balance, 236
 Chapter Summary, 253

8 Ventilation–Perfusion Relationships, 258

Introduction, 258
 Ventilation–Perfusion Ratio, 258
 Respiratory Exchange Ratio, 261
 Chapter Summary, 265

9 Control of Ventilation, 269

Introduction, 269
 Important Factors That Influence the Rate and Depth of Breathing, 272
 Other Important Factors That Influence Breathing, 278
 Irritant Reflex, 278
 Miscellaneous Factors That May Influence Breathing, 280
 Chapter Summary, 281

10 Fetal Development and the Cardiopulmonary System, 285

Introduction, 285
 Fetal Lung Development, 285
 Placenta, 290
 Fetal Circulation, 293
 Birth, 295
 Control of Ventilation in the Newborn, 302
 Clinical Parameters in the Healthy Newborn, 302
 Chapter Summary, 304

11 Aging and the Cardiopulmonary System, 308

Introduction, 308
 Effects of Aging on the Respiratory System, 308
 Pulmonary Gas Exchange, 311
 Arterial Blood Gases, 311
 Effects of Aging on the Cardiovascular System, 313
 Chapter Summary, 317

PART II Advanced Cardiopulmonary Concepts and Related Areas—The Essentials**12 Electrophysiology of the Heart, 319**

Introduction, 319
 Five Phases of an Action Potential, 319
 Chapter Summary, 323

13 The Standard 12-Electrocardiogram Lead System, 325

Introduction, 325
 The Standard 12-Electrocardiogram Lead System, 325
 Normal Electrocardiogram Configurations and Their Measurement (Lead II), 326
 Chapter Summary, 335

14 Electrocardiogram Interpretation, 337

Introduction, 337
 How to Analyze the Waveforms, 337
 Step 1: Does the General Appearance of the Electrocardiogram Tracing Appear Normal or Abnormal?, 337
 Step 2: Does the Ventricular Activity (QRS Complexes) Appear Normal or Abnormal?, 337
 Step 3: Does the Atrial Activity Appear Normal or Abnormal?, 338
 Step 4: Does the Atrioventricular Relationship Appear to Be Normal?, 339
 Step 5: What Is the electrocardiogram Interpretation?, 339
 Ventricular Fibrillation, 348
 Asystole (Cardiac Standstill), 348
 Atrioventricular Conduction Defects, 348
 Chapter Summary, 351

15 Hemodynamic Measurements, 359

Introduction, 359
 Hemodynamic Measurements, 359
 Hemodynamic Values Computed from Direct Measurements, 361
 Stroke Volume Index, 362
 Right Ventricular Stroke Work Index, 363
 Left Ventricular Stroke Work Index, 363
 Vascular Resistance, 364
 Pulmonary Vascular Resistance, 364
 Systemic or Peripheral Vascular Resistance, 365
 Chapter Summary, 365

16 Renal Failure and Its Effects on the Cardiopulmonary System, 369

Introduction, 369
 The Kidneys, 369
 The Nephrons, 371
 Blood Vessels of the Kidneys, 373
 Urine Formation, 374

Glomerular Filtration, 374
 Tubular Reabsorption, 374
 Tubular Secretion, 374
 Urine Concentration and Volume, 374
 Countercurrent Mechanism, 374
 Selective Permeability, 375
 Regulation of Electrolyte Concentration, 375
 Sodium Ions, 375
 Potassium Ions, 375
 Calcium, Magnesium, and Phosphate Ions, 375
 Role of the Kidneys in Acid–Base Balance, 375
 Blood Volume, 377
 Capillary Fluid Shift System, 377
 Renal System, 377
 Renal Failure, 377
 Common Causes of Renal Disorders, 377
 Mechanical Ventilation as a Cause of Renal Failure, 379
 Cardiopulmonary Disorders Caused by Renal Failure, 379
 Hypertension and Edema, 379
 Metabolic Acidosis, 379
 Renal Acid–Base Disturbances Caused by Electrolyte Abnormalities, 379
 Anemia, 379
 Bleeding, 379
 Cardiovascular Problems, 380
 Chapter Summary, 380

17 Sleep Physiology and Its Relationship to the Cardiopulmonary System, 383

Introduction, 383
 Eyes Open—Wake, 385
 Stage N1, 386
 Stage N2, 386
 Stage N3, 386
 Normal Sleep Cycles, 390
 Functions of Sleep, 392
 Energy Conservation, 392
 Circadian Rhythms, 393
 Normal Sleep Patterns, 393
 Newborns and Infants, 393
 Toddlers and Preschoolers, 393
 Children and Adolescents, 393
 Young and Older Adults, 393
 Factors Affecting Sleep, 394
 Common Sleep Disorders, 394
 Insomnia, 395
 Hypersomnia, 395
 Narcolepsy, 395
 Sleep Apnea, 395
 Periodic Limb Movement Disorder, 398
 Restless Legs Syndrome, 399
 Normal Cardiopulmonary Physiology During Sleep, 399
 Autonomic Nervous System, 399
 Musculoskeletal System, 399

Thermal Regulation, 399
 Renal Function, 399
 Genital Function, 399
 Gastrointestinal Function, 399
 Endocrine Function, 399
 Cardiovascular Function, 400
 Sleep-Related Dysrhythmias, 400
 Cerebral Blood Flow, 400
 Respiratory Physiology, 400
 Chapter Summary, 401

PART III The Cardiopulmonary System During Unusual Environmental Conditions

18 Exercise and Its Effects on the Cardiopulmonary System, 405

Introduction, 405
 Respiratory Functions in Exercise, 406
 Increase in Arterial Blood Pressure, 411
 Increase in Pulmonary Vascular Pressures, 411
 Dilation of Muscle Capillaries, 411
 Interrelationships Among Muscle Work, Oxygen Consumption, and Cardiac Output, 411
 Influence of Training on the Heart and Cardiac Output, 413
 Stroke Volume versus Heart Rate in Increasing Cardiac Output, 413
 Body Temperature/Cutaneous Blood Flow Relationship and “Heat Stroke”, 414
 Chapter Summary, 414

19 High Altitude and Its Effects on the Cardiopulmonary System, 416

Introduction, 416
 Acute and Chronic Effects of Hypoxia, 416
 Acclimatization to Low P_{O_2} Breathing, 416
 Increased Pulmonary Ventilation, 418
 Changes in Pulmonary Mechanics and Pulmonary Function, 418
 Increased Number of Red Blood Cells, 418
 Acid–Base Changes, 418
 Altered Oxygen Diffusion Capacity, 418
 Ventilation–Perfusion Relationship Changes, 419
 Cardiac Output Changes, 419
 Increased Pulmonary Arterial Pressure (Pulmonary Hypertension), 420
 Increased Systemic Capillaries in the Peripheral Tissues, 420
 Clinical Conditions Associated with High-Altitude Exposure, 420
 Myoglobin Concentration, 422
 Acute High-Altitude Pulmonary Edema, 422
 Acute High-Altitude Cerebral Edema, 422
 Chronic Mountain Sickness, 422
 Effect of Altitude on Body Weight, 422
 Chapter Summary, 423

20 High-Pressure Environments and Their Effects on the Cardiopulmonary System, 424

Introduction, 424

Diving, 424

Breath-Hold Diving, 425

The CO_2 - O_2 Paradox, 426

The Mammalian Diving Reflex, 426

Decompression Sickness, 426

Hyperbaric Medicine, 427

Chapter Summary, 428

Appendix A Symbols and Abbreviations, 430

Appendix B Units of Measurement, 432

Appendix C Poiseuille's Law, 436

Appendix D DuBois Body Surface Chart, 438

Appendix E Cardiopulmonary Profile, 439

Appendix F P_{CO_2} / HCO_3^- /pH Nomogram, 441

Appendix G Calculating Heart Rate by Counting the Number of Large ECG Squares, 443

Appendix H Answers to Review Questions in Text, 444

Selected References and Bibliography, 455

Glossary, 462

Index, 476
