

BRIEF CONTENTS

Acknowledgments	xix
Authors' Note	xxi
Preface	xxiii
Introduction	xxvii

PART I: GETTING STARTED WITH AI

Chapter 1: Understanding Large Language Models	3
Chapter 2: Building Your First LLM-Powered Application	15
Chapter 3: Python Essentials for LLMs and APIs	29

PART II: PROMPT ENGINEERING

Chapter 4: Fundamentals of Prompt Engineering	43
Chapter 5: Prompt Engineering Techniques	61
Chapter 6: Prompt Engineering in Code	77

PART III: VECTOR DATABASES AND RAG

Chapter 7: Vector Databases in Practice	127
Chapter 8: Designing a Retrieval-Augmented Generation System	157

PART IV: ADAPTING MODELS TO REAL-WORLD TASKS

Chapter 9: Why and When to Customize a Model	193
Chapter 10: Preparing Data for Fine-Tuning	203
Chapter 11: Fine-Tuning Models in Practice	215

PART V: BUILDING AGENTIC SYSTEMS

Chapter 12: From Workflows to Autonomous Agents	243
Chapter 13: Building an Autonomous Agent	249
Chapter 14: Extending Agents with Tools	255
Afterword	269
Index	271
