Preface xi

	Introduction	1
	Four Horsemen of the Bias	
	Apocalypse	2
1	All at Sea: What is Systemic Error (Bias)?	6
	What is Systemic Error?	6
	A Brief History of Bias	
	Etymology	9
	How Many Forms of Bias Are There?	9
	Biases Not Recognized in 1978	11
	Bias Contributes to Research Waste	12
2	Are Scientists Inherently Biased?	14
	Is Bias in Our DNA?	15
	Cognitive Bias: Some Biomedical Interest	17
	Cognitive Bias: Frequently Described by Psychologists and Economists	19
	Fraud	22
	Manipulated Images	22
	Groupthink	23
	Recency Bias	24
	Lumpers and Splitters	24
	Loss Aversion Bias	26
	Thinking Out of the Box	27
3	Biased Research in Recent Times – Even among Some of the Brightest	28
	Infamous Tuskegee	28
	Eugenics: A Grave Misapplication of the Scientific Method	29
	Bias in Underprivileged Populations: The Roma Case	32
	Electromagnetic Fields Do Not Cause Cancer	32

4	Bias in the Research Question Asked	35
	Gender Bias	35
	Funder Bias	37
5	Research Participation Bias	44
	Response Bias	44
	The Hawthorne Effect	46
	Study Participant Preference	46
	Pretest Sensitization	46
	Informative Presence Bias	47
	Litigation Bias	50
	Adverse Event Reports	50
6	Bias in Study Subjects	52
	Survival Bias	52
	Live Birth Bias: A Special Type of Survival Bias	53
	Healthy Worker Effect	54
	Selection Bias or Participation Bias	55
	Presentism Bias	56
	The Horse-racing Effect	57
	Frosted Intellectuals and Diagnosing Autism	57
	Sampling Bias	58
	Nonparticipation Selection Bias	59
7	Compared to What?	60
	Historical Controls	60
	Hospital Controls	61
	Choice of Pregnancy Controls Influence the Abortion–Low Birth Weight Risk Estimate	62
	Controls in Natural Experiments	63
	Manipulated Control Groups	64
	Inappropriate Pharmacology	
	epidemiology Controls	64
	Negative Controls	65
	Sibling Controls	66

- 8 **Bias in the Study Conduct** 68
 - Ascertainment (Surveillance, Detection) Bias 69
 - Recall (Recollection, Rumination) Bias 69
 - Interviewer Bias 70
 - Residual Confounding 72
 - Response (Compliance) Bias 72
 - Classification Bias 74
 - Stage Migration Bias 77
- 9 **Bias in the Conduct of Animal Studies** 79
 - Poor Methodological Rigor 80
 - Insufficient Literature Synthesis and Ignored Guidelines 81
- 10 **Bias in Statistical Analysis** 84
 - Chance (Random Error) 86
 - Data Precision 88
 - Averaging Bias 89
 - Multiple Comparison Bias 89
 - Subgroup Analysis 90
 - Dependent Observation Bias 91
 - Collider Bias 92
 - Regression to the Mean 93
 - The Absolute Size of an Association 94
 - Statistical Significance Testing 95
 - Odds Ratio Bias 96
 - Do Extreme Results Reveal Bias? 96
 - Unit of Analysis Error 97
- 11 **Bias in Study Interpretation** 100
 - Believing Is Seeing: Confirmation Bias 100
 - The Prosecutor's Fallacy and Other Tricks of the Trade 102
 - The Texas Sharpshooter 104
 - Understanding Risk from Very Rare Exposures 105
 - The Problem of Adding 0.5 105
 - Zero Events Can Still Be Informative 106
 - For Rare Events, the Observed Effect Is Not the "Best Estimate" 106
 - Flipping the Event 106
 - The 0.05 p -value Is Not Arbitrary 107
 - Reliance on Relative Rather than Absolute Differences in Risk 107
 - Reverse Causality 108
 - Bias Affecting Time 108
 - Lead Time Bias 108
 - Length Time Bias 109
 - Immortal Time Bias: Do Popes Live Longer Lives? 109
 - Stein's Paradox 110
- 12 **Bias in the Dissemination of Study Results** 112
 - Outcome Reporting Bias 112
 - Publication (File Drawer) Bias 113
 - Winner's Curse 114
 - Citation Bias 116
 - Peer Review Bias 117
 - Status Bias and the Matthew Effect 118
- 13 **Bias in Pooling Data from Multiple Studies** 120
 - The Systematic Review 120
 - Meta-analysis 121
 - Bias in Systematic Reviews 121
 - Cochrane Collaboration Reviews and Guidelines 122
 - Systematic Review Methods for Avoiding Bias 124
 - The Focused Question 124
 - Searching the Literature 125
 - Living Systematic Reviews 125
 - Do Repeated Meta-Analyses Need Error Adjustment? 126
 - Duplicate Data 126
 - Network Meta-analysis 127
 - Fixed or Random Effects? 128
 - Including Bayesian Priors into a Meta-analysis 128
 - Odds Ratio or Relative Risk? 129
 - Generic Inverse Variance Methods 129
 - Individual Patient Data Meta-analysis 129
 - Early Trial Termination Bias 130
 - Control Incidence Bias 130

	Concluding Thoughts on Meta-analysis	131		Evidence of Fraud in Some COVID-19 Mortality Statistics	158
14	Bias in Randomized Controlled Trials	133		Bias in Modelling	159
	Bias during Randomization	133	17	Bias in Pharmaco-epidemiology Studies	161
	Deviations from Randomized Interventions	134		Indication Bias (or Confounding by Indication)	161
	Intent-to-Treat Bias	135		Protopathic Bias and Confounding by Indication	161
	Incomplete Outcome Information	136		Methods for Controlling Indication Bias	164
	Bias in Measuring the Outcome	136		Early (Less Effective) Attempts to Control for Indication Bias in Depression-Autism Studies	165
	Bias from Co-interventions	137		Studies That More Effectively Control for Indication Bias	165
	Anesthesia, Not so Sleepy	139		The Weber Effect	165
	Mediterranean Diet: Delicious but Obdurate to Evidence of Health Benefit	139	18	Recognizing and Mitigating Bias	167
15	Bias in Genetic Studies	142		Quantitative Bias Analysis	167
	Candidate Gene Studies	142		Anticipating Psychological Bias	168
	Case-Control Genome Wide Association Studies	144		Inoculating the Research Team	168
	Phenotype Definition	145		Hierarchical Bias	170
	Allele Sharing	145		Afterword: How Bias Threatens the Search for Truth	172
	Family-Based Association Studies	146		Koch's Postulates	173
	Avoiding Selection Bias	147		Bradford Hill Criteria and Causal Analysis	173
	Population Stratification and Biobanks	148		Association	175
	Mendelian Randomization	149		Temporality	176
16	Bias in Pandemic Studies	151		Systematic Reviews and GRADE	176
	Bias in Mortality Data	151		What Is Truth?	178
	Bias in Testing Data	154			
	R	154			
	Bias When Studying the Health Effects of a Pandemic	156			
	Bias during Data Collection	157			
	Bias in Finding Patient Zero	158
